2600er ones should work. Avoid the 7800 Proline controllers as they seem to
be incompatible with the IKBD of the ST/TT/Falcon.

Best is ofcourse a good old Competition Pro 5000 :)

cheers,
Matthias

The problem, of course, is trying to find a couple of them. I don't
think they're made anymore are they?

Thanks

I was looking through the Atari listings and saw a Falcon listed by
this guy. Scrolling through the listing, I noticed he said "While
there is no reserve on this auction I do retain the right to reject
the highest bidder!". What a bunch of baloney!

To which type of sticks do you refer? Ataris ones are ofcourse not made
anymore but the Competition Pro is available as remake jyostick, both with
USB and DB9 plugs (for ST use yo uwill need the latter).
It is distributed by Speedlink but I cannot tell about special vendors.
Google aroudn a bit, IIRC Vesalia in Germany sells them.

cheers,
Matthias

  So, a couple of things come to mind -one, the seller may be too
cheap to pay
the reserve price fee, and two, if you don't like the conditions of
his listing, you
have the right to ignore the auction and keep looking. This oerson
might not
be a class acr type of a seller, but it's his item to sell as he so
chooses as long
as he follows the rules. When it doesn't sell, and he re-lists it a
few times, he
might get the idea he needs to determine a fair starting price (fair,
as far as he's
concerned, not a buyer's view).

I agree with that.

One of the problems with online Auctions is the seller doesn't really know
what the
buyer can aford.

If I was on a desert and needed water and had $2.00. I don't think it's
right for someone
to charge me $2.00 for each drop however.

Last year I had a chance to even buy another Hades060 on Ebay. I passed it up
because the seller was not sure it worked anymore and he was selling it for
about $2000.

I would do that as I am those NVRAM problems also, but I have the CT63 that I
will be installing. I am looking forward to the PCI upgrade also.

Hello,

I bought a Linksys Wireless modem so that I could run my two Xboxs. It all worked fine, so I decided to see if it would work with the Falcon. I was very happy that it did. I used a Linksys-B Gaming Adapter. It just plugs into any computer/gaming console that has an EtherNet connector. I just plugged the adapter inot the NEC2000 and it worked. Nice to know...

I've seen you post this request for a factory MegaST4 before.
Have you not been able to locate one?

> I've found them before when I posted. Now I need another one again!

Are factory MegaST4's abit rare?

> I'm sorry but I dont know!

Just curious, I have one of these, but don't want to part with
it at the moment.

BTW, do you have any motherboard parts for a Mega ST?
I'm looking for a Video Shifter chip. Normally these are socketed.

Hi Edward. So theoretically, I could take the LinkSys-B Gaming Adaptor,
plug it into my EtherNEC, then into my STacy, and have a portable wireless
Atari?

That would be way cool. Thanks.

Wow - steep price. But then, just look at Falcon, Mega STe, STacy, and TT prices lately on Ebay.

Our fav machines have held their value very well indeed! :)

I don't think it's even a matter of not knowing what the buyer can
afford.
Rather, it's either a matter of knowing the value of an item or
thinking that
the item is "valuable" and commands a high(er) starting price.  And,
the
seller may be hoping that a potential buyer has no clue as to the
item's
worth, and bids unknowingly.

As to your water example - if you wanted that water badly enough, you
might just bid your money because you were worried another opportunity
for
water might not happen anytime soon!

So the net result then, as I understand this discussion, is that we
will be able to replace our dead battery with the same type of battery
that is used in windows boxes?

Thanks

Would like to know if anyone in the U.S. has subscribed to this magazine.

What's your opinion of the magazine?

Coming from Europe, what's the delivery time between issues?

Is it worth the price?

Thanks!

Hi. Not sure about that part - I don't know if the replacement battery is
PC compatible or not. Maybe someone else can shed some light on that...

Just want to add that I don't know anyone as "claude_b"  but I have seen
something similar to this before.

Depends on the voltage. My understanding from a quick look at the cct is
that it disables the chips ability to recharge. If its 3.3v then the
answer is yes.

Mark

I don't know this seller, either.  But, I am an eBay user - seller &
buyer - and
experience tells me that many sellers and buyers have a disillusioned
view
of the "value" of various items.  I've seen incredible final sales
bargains, and
outrageous final sale prices for "cheap stuff".

Hi Lonny! Okay, thanks for the info. My workplace runs a wireless "guest" network, looks like I'll be seeing if I can access that.

If I can, I'll be telling the IT director there his network is so antiquated that I can access it with a 20 year old Atari laptop... <evil laugh>   (its okay - we're friends)... :)

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

A new site about Atari TT has came to being. All interested people are
invited. We aim at gathering informations (as much as we can find)
about 32-bit Ataris and also we want to contact TT-users with those
who still make various extensions to TTs. You can join the online list
and help us with developing the site. We also look for someone who can
help with making German version of it.

The link to the site is: http://www.ataritt030.info

Really cool and useful data base that (I hope) will grow!

I liked the Atarians list (I joined!) and the links that everyone can add.

I will add a link to your site from mine.

Guillaume.

I was going to trade a Mega4 ST with upgraded Keyboard (megaClick) for
an 800xl That Ben still has listed about 2 or 3 years ago.
So not sure whats up with that.

I would be carefull with him, His site says how he Checks everything
complete, but all his ST computers
Say AS IS , Untested ect... Which I think means there not working..

Noticed that too, and it does seem kind of odd.

On the other hand, I've bought software from him before,
with no problems at all.

I am not involved in making money from this, but I just found out who, in the USA, bought up Atari's Hooded Pullover Jacket overstock, from about 7 years ago. I had one, it was stolen, and being a large person, or at least large enough, I have replaced it.

James Stylin and one hired help are stylinonline.com. He makes a market in shirts and caps and belt buckles of interest to players of modern computer games, and one of interest to Atari users. It is thicker than the usual pullover, in dark blue, with light blue Atari Logos on chest and sleeve, and not only that, are on sale, to get rid of them.

My first one came from a fellow whose logon name was Small Sam. At his pretty big height, his was too short for him, and he sold it to me on E-Bay. It got stolen by the housekeeping staff at a hotel, and I have replaced the stolen one.

They have size Large only, so if you are also large enough, we can both wear one and recognize each other that way.

If anyone needs help in getting on of those things to Singapore, which is on the other side of my world, I will help. They look really nice.

Jim

I would be carefull with him, His site says how he Checks everything
complete, but all his ST computers
Say AS IS , Untested ect... Which I think means there not working..

I am tying to find the parts for a floppy drive or a working or non working
floppy. I have a Mega St and need the face from a drive so that it fits in
my mega correctly. Anyone have those parts? I need the face button and led
from the drive.

Thanks

Bonsoir

Download on my webpage or directly in the folder
http://rajah.atari.org/files/ -> kkcmd14b_uk.zip (160KB)

Changes in this Total Commander clone:
-fix: if extension, bad spaces removed in new empty file or folder
-fix: if .ZIP opened, the window contents (but not the .ZIP file) was cleared,
      when file deletion in the other window
-fix: size of dragbox (copy or move files) is more adapted if more than one
      selected items
-fix: didn't keep date when unzipping (if option 'keep date' was selected)
+add: .MSA and .ST files in command line (.ZIP was already managed)
+add: VA_START protocol for .MSA .ST and .ZIP files

Also Litchi was updated with the 'dragbox' fix.

Voil�.

It would be helpful if you described the bezel more precisely, since
there were at least two different floppies built into STs and Mega STs:
Chinon (large eject button beneath the disk slot) and Epson (small eject
button on the right side).

Correct. It also holds some other settings.

> If so, can one remove the Top of the Chip and replace the battery?

Only certain variants of the chip :-(

> And what does the Battery look like, is it the Top part of the chip or
> some type of watch battery??

Some type of watch battery. Chips where you can lift the top can have an external battery fitted, commonly a CR3023 in an external holder. It'll be fairly obvious if you can lift the top, but be careful if you're just prodding about due to the oscillator crystal just inside.

> Does this battery also keep the NVRAM settings when the machine is
> OFF?

Yes.

> Does the NVRAM have anything to do with the Factory Control Panel
> software or the Newdesk.INF file?

Settings that must be retained across power cycles that aren't held in the .INF file.

> Are there any other things that the NVRAM does that could cause
> trouble if the battery is bad/weak?

Usually it's the failure to hold time settings that give you the clue.

Replacing the chip is a fairly easy job, but there is one pin that is hard to unsolder because it's connected to what seems like a large copper plane on an inner PCB layer. You will probably want to cut the chip free from its pins, as close to the chip as possible so that you have something to grip as you unsolder each pin.

Much appreciated.

Looks like I have a NVRAM chip or battery to replace.
I have a couple of motherboards for parts, not sure if the NVRAMs on them are any better.

From memory, mine, all the NVRAM chips that I have look about the same.
They are rather Tall, and look like they have a long rectangle block on top with a line between it and the bottom part of the Chip.
Would this be the one with the replaceable battery?
Doesn't it require cutting with something like a Dremel tool or sharp knife to get it apart?

I'd like to do the battery fix, if this can be done on this type.

I'd bet money on it. I just replaced one of mine and my towered CT2
Falcon needs doing too. The best solution is desolder and fit a socket,
then fit a new chip.

Give it a try on one of your spare boards and see if you can do it
without damaging anything.

Mark

This isn't really c.s.a._8bit_ related, is it? :)

Because I'm a klutz at soldering anything so fine as what seems to be on
the Falcons motherboard, and I didn't want to ruin anything, I had this
done by Alex Yu at ATY Computers, here in the US. Parts came from Brad
Coda at Best Electronics.

Now, if the clock goes dead on my Falcon again, I can replace it myself. :)

If you're saying what I'm thinking, I wouldn't want to recycle NVRAM
chips from old boards. The battery lies dormant until you write to it
(ie fit the chip, then use a utility to set it up). Then it continues
to power the chip until it's exhausted.

> From memory, mine, all the NVRAM chips that I have look about the same.
> They are rather Tall, and look like they have a long rectangle block on top

Correct.

> Would this be the one with the replaceable battery?
> Doesn't it require cutting with something like a Dremel tool or sharp knife
> to get it apart?

No need for such action - the ones I'm on about have a softish plastic
top that is easy to lever off. I didn't think to try such drastic
action on the two I replaced recently, which did not have such "lids".

>
> I'd like to do the battery fix, if this can be done on this type.

It's the easist way forward IMHO. BTW, if you do decide to fit a
socket, you must be sure that you can get it and the NVRAM chip to
still fit under the keyboard.

Wow, good thinking on that part Derryck - I never considered it because I have my Falcon recased in a Wizztronics rack mount.

If you've got the original case, it would be something to consider.

The low-profile turned-pin sockets should be OK.

I agree - I just got mine done by Derryck, who posted an earlier comment here. Note that if you want to keep the use of the original shielding that fits under the keyboard, you will have to cut a hole in it if you put the clock chip in a socket (highly recommended if you need to replace it for a flat battery again in the future, provided you keep it that long!); it's not difficult with a Dremmel-type tool using a grinding disk. I even managed to cut one side of the rectangular hole with a Stanley knife, though it was hard work and took a loooong time :-(

Regards, /Peter/

The battery is replaceable on all variants - the amount of cutting and the layout of the wires in the potting material may differ.

Note that both the lithium battery and the crystal for the RTC are in the upper part of the module - you need to disconnect the old battery (at least one wire), but keep the crystal connected.

On the modules where the "backpack" is only connected at the two short sides, with a gap between the RTC case and the backpack, you can cut the backpack in half and remove the half with the battery - an example (MK48T02 from a SUN SparcStation, not the exact type used in the Falcon):
http://www.ccac.rwth-aachen.de/~michaels/images/nvram1.jpg
http://www.ccac.rwth-aachen.de/~michaels/images/nvram2.jpg
http://www.ccac.rwth-aachen.de/~michaels/images/nvram3.jpg

AFAIR, on the fully potted Dallas variants, the missing bottom pins are bend up to connect to the crystal and battery - comparing the pinouts of the original MC146818A and the DS1287 should give a clue. Hm - googling for the pinouts, it seems the MCA PS/2-PC guys had the same problem and Peter Wendt documented the procedure:

http://www.mcamafia.de/mcapage0/dsrework.htm

>Doesn't it require cutting with something like a Dremel tool or sharp knife
>to get it apart?

Dremel might work, knife probably not, the plastic is quite hard. When working with a Dremel, be careful not to leave metal dust inside the machine.

This is very good news :-) I will download and test it as soon as I have
repaired my Milan.

Fascinating. I've used the technique of milling away the potting material in the past, to repair a broken-off pin. Broke it whilst installing a mod which involved cutting said pin and soldering a wire to it :-)

Hi,

I am an owner of an AtariST from the start but never had the chance to
try MagiC 6.1/6.2 on it.

Is anybody willing to upload a copy to my FTP server to try it out?
Would be great indeed, thanks very much in advance.

I am thinking of putting some 8-bit stuff on it as well.

Still working on it...

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of those bookmarks persist since the creation of the WEB site, back in 1996.

The interest with these numerous bookmarks, there's more than 600, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It has now become quite consistent.

This is an experience of WEB 2.0. Even if I'm responsible for its creation, *ATARI Search Engine* can possibly be integrated by webmasters adding the HTML code

```

This guy has been trying to get a pirate copy of MagiC on the
German Atari sites for months - and been told repeatedly that it
```

is still commercial and he should buy it! DON'T FEED THE TROLL!!!

Isn't there a "trial" version, something with limitations?

Guillaume.

Hi,

I have a older version of MagiC, didn't know it was still being supported.
Is there a English Site for Upgrades?

It would be good to have a list of known supported Atari ST-Falcon Software.
Posted in some of the Atari NewsGroups, it would remind some of us that
there are still some software thats being supported or can still be bought
new.
I have always bought the software that I use.

Hello.

I have a new (to me :) Mega4, which came with an SH205 hard drive. I also
have my previous STe.

When I plug the sh205 into the Mega, and reboot, it does not see it. It
works fine with the STe without any configuration and seems to find a
driver on the hard drive.

So, do I need a special driver for the Mega? It seems odd that it does not see the drive.

I'd like to use the Mega as it has more memory. Unfortunately, the floppy is dead too. So, can I swap the STe floppy for the Mega one? Also, can I take the memory from the Mega and put it in the STe?

Any pointers appreciated.

You did try starting it from a "cold" start (everything off, then HD on first, then ST) as well, right? With no floppy in the floppy drive, you'll also have to wait longer for a bootup.

> So, do I need a special driver for the Mega? It seems odd that it does
> not see the drive.

Seems odd and suspicious to me too. I'd hook the SH205 to the Mega ST and boot up with the hard drive software on a floppy in the floppy drive and see what it reports.

> I'd like to use the Mega as it has more memory. Unfortunately, the floppy
> is dead too. So, can I swap the STe floppy for the Mega one? Also, can I
> take the memory from the Mega and put it in the STe?

Oh, the floppy is dead - hmm, then you can't boot up with your hard drive software. You'll need to get the floppy working to do that - that software can tell you a lot more about what is going on.

Depending on the drive "face" you can swap them out - but the Atari drives came with large eject buttons, small eject buttons, etc - you should be able to look at it and see if it will fit or not.

I don't think, unless its some 3rd party/aftermarket board in the Mega ST, that you can swap memory - the STe uses SIMMs.

> Any pointers appreciated.

There'll be others answer this thread - help is coming! :)

Hope this helps in the meantime.

What does "seems to find" mean precisely? Does it boot and can you access it as drive C: (perhaps after creating a desktop icon for it manually)?

If not, you might try running AHDI 6.061 from your disk drive (after replacing it) and see if the drive is accessible afterwards. You also may want to mark bad sectors with HDX - as used ST506 MFM drives that have not been parked prior to moving will most likely have a number of bad sectors. And you may also want a program to park the drive yourself so you can move it.

I bundled AHDI with some other free hard drive tools (esp. the last version of HDX, as at least one prior version I tried was unable to format and partition the SH205) at <http://www.dilgar.de/ahdi6061.zip>.

With HINSTALL you can then make the drive bootable. This should also work with the Mega ST, as the drive is a small one and even a single 20 meg partition is far less than the maximum of 256 megs for a TOS 1.02 compatible partition.

> So, do I need a special driver for the Mega? It seems odd that it does not see the drive.

Nope, they all use the same software. Yet, TOS 1.02 has some bugs that were fixed with 1.04. i'd recommend this TOS as the lowest recommendable version for hard drive use.

> I'd like to use the Mega as it has more memory.

Any STe has four 30-pin SIMM sockets and can easily be upgraded to 4 megs.

> Unfortunately, the floppy is dead too. So, can I swap the STe floppy for the Mega one?

Yes, if the bezel fits. No, if not.

> Also, can I take the memory from the Mega and put it in the STe?

No, the memory of the Mega ST consists of RAM chips soldered to the mainboard (or perhaps socketed), while the STe requires 30-pin SIMMs. You can take the SIMMs of any old (e.g. a 80486 one) PC though if they are 1 meg max. each - those should be some cents at eBay. Just be sure that you have four of them or - if you can only find two - use the first and third SIMM socket and leave the other two empty (there is a small patch that allows to access 2.5 megs with 2 1 meg and 2 256 K SIMMs, but I don't even consider this worth the hassle).

Except for the keyboard (the STe keyboards are from Mitsumi, the Mega ST keyboards from Cherry) and the lack of a battery-powered clock, I consider the STe the much nicer machine, sadly the enhancements like the PCM stereo sound, the hardware scrolling and the additional joypad ports (compatible with the Jaguar) etc. were used by only a few dozen commercial games because Atari did not discontinue the STfm models when they introduced the STe, so that many buyers bought the "cheaper" machine, but some of these (like Obsession Pinball) really show that this computer is much better than it's predecessors.

Thorsten

Whilst things are basically the same, the way auto start works on the MEGA
and the STE are somewhat differently. I can't remember the details but this
could be the difference. For the MEGA you will need one of the auto utils to
run a shell or whatever.

> So, do I need a special driver for the Mega? It seems odd that it does
> not see the drive.

Have you booted from an AHDI floppy.

> I'd like to use the Mega as it has more memory. Unfortunately, the floppy

> take the memory from the Mega and put it in the STe?
>

Much easier to upgrade the STE but you have of course an integrated
keyboard.

> Any pointers appreciated.

Not sure, but I am still in the game. I use my Falcon for a number of things (DTP, home finance, web browsing, etc). A number of my Atari buddies have moved on to the PC. There are still users out there who we probably do not know about and many that we do. There also dealers we can rely on to get software and fix our hardware. Hey, I know the interest is still out there. I cannot count the number of times I have lost Atari items on Ebay.

ASH are/were the distributors; their web site is still up, but whether there is anyone there is a matter of conjecture :-)

Last I heard, they had someone who could speak English, but you/anyone won't have a problem finding someone to translate.

As for an English version, all the necessary resource files are on my web site. There might even be a patch file to change the remaining German into English.

I'm occasionally using MagiCMacX on my Mac, which I purchased from Ulf Dunkel.

Exactly - just go to ebay and search on Atari st - if the return looks
low, then change the parameter from auctions to buy it now - Atari ST
returned 381 hits just now. :D

I tried it again with the Mega, leaving the HD on for 30 seconds first,
and it worked!

The floppy face on the 1040STe is different to the Mega. Luckily I also
got given an 520STfm, which has the same bezel. I don't know if the 520's
drive is working yet though.

It comes up with four partitions on the desktop automatically and an icon for a RAM disk, which does not seem to do anything.

>
> If not, you might try running AHDI 6.061 from your disk drive (after

I think the hard drive may well be a little ill. It is however working on the Mega now after turning them on in the right order!

It's been partitioned into 4 drives (C,D,E,F) and when I click on C it says 'Data on disk in drive C may be damaged. You must use the right kind of floppy disk and connect your hard drive properly.' (CANCEL/RETRY).

If I click cancel then I do get a folder window, and can start programs. Some will not work though, and writing anything to the disk causes the 'may be damaged' error message too.

On Boot, the screen says something like:

AHDI 4.02

Gdos 1.1

>
> I bundled AHDI with some other free hard drive tools (esp. the last

Downloaded it. Cheers.

I think the drive is 20MB.

I think I will reformat it into two partitions, as it's acting a little funny.

So... the HDX utility is for formatting and checking bad blocks, then you run HINSTALL to make it bootable. Anything else I need to know?

I am going to use this machine for Cubase and a Zcode interpreter, so the
Mega should be fine. (20MB is a lot of space for midi files!)
The clock, more ram and nicer keyboard should be handy for this.

I also found my extra midi port, that plugs into the modem socket.
Lost the drivers for it though. :(
I believe it's a 'plus16', and may work with the plus48 or pls48 drivers
in Cubase. There are no markings on it.
It's been a long time since I used it last!

The "40 folder problem" springs to mind. Put the FOLDRXXX.PRG into the
AUTO folder of drive C: after renaming it to e.g. "FOLDR100.PRG" - this
is especially necessary for your Mega ST!

SHIPACC.PRG allows you to park your hard drive - runs as both ACC and PRG.

AHDICONF is of some use if you want to tweak AHDI a little.

CHKDISK3 is a powerful tool for hard drive sector editing,
defragmentation, etc. but the dark side is strong within this one, i.e.
you can easily delete data with the more advanced functions of this program.

Server still up-and-running. Who can make me a happy guy?

Thanks a lot for your time and effort. Much appreciated!

Happy computing (since 1985 on my AtariST, now also having an AtariSTe
4 MB with ICD-Linked harddisk drive 50 MB :)))!

Hello!

HiSt of BITS presents...

BITS#12 Demostration

It is a 9 parts
demostration with:

colorful moiretizings,
scrolls,
checkers multidirectional,
sprites,
one-liner,
rain fall effect,
4 YM-2149 chip musics.

Visit:
http://thebitsclub.tripod.com
Youtube:

Are Atari 2600 joysticks compatible with the Falcon?  I have a jagpad
for the Falcon's enhanced game ports, but I need a couple of joysticks
for the regular game ports....not all games utilize the jagpad.

Thanks

I still have my Mega STE set up but it's been many months since I used it. I used to use it for text email and Usenet when I was on dial-up, but now that I have broadband I'd need ethernet connectivity. My provider doesn't have dial-up backup, and I can't justify the expense of another service just for nostalgia - particularly during these economic times.

I also have a complete 320K 130XE system that worked just great the last time I dug that out - probably six months ago. Those old 5-inch floppies have a surprising lifespan, and those old games have a charm missing from today's efforts.

I've moved on to Linux almost exclusively these days. I have a couple of apps for Windows that I still use, but that's almost as rare as using my Atari anymore.

TJ

I was online from my Falcon at the weekend, chatting on IRC. I think I need to do the NVRAM battery thing though. For me, it's a matter of time and utility - I do like getting things running but unless I have

something that I need to use a particular computer for I tend to go
with the convenience of my laptop.

Get an EtherNEC - then you can still hook up to your LAN, and do e-mail,
newsgroups, etc... :)

Oops, sorry - didn't mean to make this 2 replies but I re-read this part
and boy, do I agree! The older games do have something special about them.
Don't get me wrong, I'm as big a fan of the latest/newest visual/audio
overload game release as anyone...(and play Guild Wars to death),but...
DungeonMaster, Bards Tale, Ultima 3/4/5, and so many more.... Oh my. :D

There a short writeup on my webpage http://phsw.atari.org that
replaces the NVRAM battery by just 1 pin cut and some soldering. Not
elegant but it works. Running like that for over 6 months now,

Have fun!

Greetings,

A friend of mine is interested in programming and wants to do some coding on the Atari Falcons DSP.

He is looking for some simple examples from which he can use to get started and build on.

He's interested in doing Graphics/Video, Audio and Communications stuff. And wants to try coding the DSP port to work with different types of hardware, and or build sometype of add-on board for experiments with different hardware.

He is wanting to know what programming software would be best for this and needs software examples to get started.

He is just starting out on this and needs beginner info to start out and advanced stuff to keep interested after mastering the beginner stuff.

I'm not sure how to get him started on the best course, so asking for advice and where to find the software and any reading material. Anyone??

Not sure why the friend of yours can't write for himself but as Adam pointed out, he can always ask at dhs forum. I've got quite a experiences with DSP coding but I don't want to waste time for writing some general answers to some imaginary person :) Dhs forum is being watched by the well known DSP coders and me ;)

I made lot of experiments with DSP on Falcon. DSP Programming is a little bit strange but exciting! (like some registers are not always updated after a command or memory use)

A good thing to start is to read Atari Official Developer Kit Doumentation. I don't know an easy way to download it but you can find a scanned version

in DjVu format (Page 103):
http://letotd.free.fr/djvu/doc%20dev%20falcon.zip
You will find specifications of the DSP 56001 present in the Falcon and important memory map informations.

In addition, you must retrieve exhaustive informations of Motorola DSP 56k family:
http://www.freescale.com/
You will find useful User Manuals.

> He is looking for some simple examples from which he can
> use to get started and build on.

French ST Magazine published good DSP courses with examples on disks since issue 81 but only in french.
Disks with C and DSP examples:
http://stmagazine.org/
Scans of ST Mag:
http://www.abandonware-magazines.org/
These examples with some kind of optimizations are not always very good in my mind.

Next you will try official DSP 56001 Debugger, Dsp Tools and if you need the excellent PureC:
http://dhs.nu/files_code.php
Debugger is a very attractive tool but not always have the same behaviour as the real DSP. You can find other examples in the archive.
Dsp Tools is a command line tool not user friendly but do the job.

GOOD LUCK.

Yvan Doyeux

If you mean write code, the answer is he is a beginner.

If you mean why he didn't ask for the info him self.

Well, he feels that he would be put on a Black List, which could lead to people advoiding him, Job loss, and other bad stuff that comes with the territory.

He won't even subscribe to this newsgroup in any form.

BTW, he thinks I'm either very Brave or just plain Crazy.

 but as Adam

My friend says to thank you for the information.

I think this will help get him started, I also found some
simple examples of DSP code for him to experiment with.

If you happen to come across anything you think will
help, then do pass it along in e-mail or here.

```

To follow up, here's what I think I've figured out.

The Transfer Utility Ben mentioned comes with ST Xformer, the 8-bit Atari emulator for the Atari ST. ST Xformer doesn't recognize .ATR image files, the most common Atari 8-bit disk image file format by far, so this complicates things for someone in Ben's situation (with an ST, but no PC handy).

Ben thought he needed image files in the .SD or .DD formats in order for them to be recognized by ST Xformer, so he could use this Transfer Utility to get them to the 8-bit. I had never heard of .SD or .DD. But I just found this in the README that comes with the ST Xformer 3.0 sources:

"The disk format used by Xformer is "XFD" (Xformer Floppy Disk) also known earlier as .SD or .DD depending on the density. In Xformer 2.4 I added the

ability to access pretty well any size disk image, so the extension XFD was picked to be a generic case. The XFD format is quite simple. It is just a sector dump of a real 8-bit drive. Take the number of sectors on the disk and multiply by the sector size (128 or 256) and that is the size of the XFD
file. No headers, no extra info."

So that answers the .SD and .DD question, they're just .XFD!

Furthermore, I just rediscovered a utility that runs on the ST that converts .ATR to .XFD image files. "ATR to XFD 1.0" for the ST by Miro Kropacek (MiKRO) is available at:
http://mikro.atari.org/

So, I hope this is helpful to Ben, and any others following along.

Let me know if there's still more to this story than this!

-Michael

Job loss??? For asking how to code on 15 years old DSP? Cool.

I really really wish the ribbon connectors were behind the PCI slots
rather than beside. In my case layout they are encroaching the motherboard
area whereas behind hte pci slots i Have plenty of room. :-/

Hello,

Happy new Year 2009 to all atarians.

A new batch of 20 CT63 may be produced this month and shipping planned for March (no delay this time).

I need 20 buyers and I have 14.

It is the really last batch because of new projects after (CTPCI and an other) and the factory difficulty to solder correctly all parts (I had 7 boards to repair on the previous batch !) because of the lost of the solder mask inox (too expensive to produce again) when the previous factory closed.

You last chance to get a CT63 on your Falcon.

Price stills 320 EUR.

www.czuba-tech.com

Regards

Some time ago I bought a second hand Atari 520STE, and included was a cartridge which I don't know what is for.

Please, could anybody tell me for what is that cartridge for? Many thanks.

Here are some pictures that I took:
http://fotolog.miarroba.com/f/9/5/0/5826950/1.jpg
http://fotolog.miarroba.com/f/9/5/0/5826950/2.jpg
http://fotolog.miarroba.com/f/9/5/0/5826950/3.jpg

The main chip is named HARTD1 87HCI, but I couldn't find any information in Internet about it.

If that plug fits into an external drive, then I would hazard a guess and
say its one of the cartridges that copy protected Floppy disks, like games.
If thats right, you'd still need the software that came with it though.

Can't remember all the names, but Synchro Express comes to mind.

Just a guess though, mind you. :)

Perhaps it's a Blitz cable.  The Blitz was used to copy software,
including most copyrighted programs.

Perhaps if you open the case of the cartridge, it might have
a name and address on it. That could help you determine what
it's for.

Uhm... woulda been hard to take the pics and get the chip number without
taking the case apart.

Obviously you didn't look the links to the pictures that I have
posted, neither read my entire post, have you?

Indeed I have opened the box, took some pictures and noted the name of
the main chip. All of this is in my 1st post.

Regards.

Thanks everybody for the information.

Based in what you told me, I searched for some information about Atari
cartridges for copy purposes.

And indeed I have found that the connector on my unknown cartridge is
the typical connector to be connected to an Atari floppy drive.

Also I have found that one of those cartridges for making copies,
called Discovery Cartridge (made by Happy Computers, Inc in 1987) have
a HARTD1 chip in it.

Many thanks to everybody for the help.

Hello,

Your suggestion is excellent !
But why did you crite here instead of directly to me ?
I read just now and it is very late now to change...

I will try.

The HART chip is normally associated with a HAPPY Disk Copier.

I have the Discovery Cartridge, the Large one.
IIRC, they also made a smaller one for the ST that also connected to the
cartridge port, but I didn't think it had a cable. ICBW, because I only
saw a pic of it. However the case was similar but different.

This Case looks exactly like a Migraph Hand Scanner cartridge interface,
except for the
cable. On the Migraph case, there is a small port where you connect the hand
scanner
cable, in about the same location where the cable on this one is.

However, I've not taken my scanner interface apart, to look inside.
The GoldenImage Scanner Interface is just like the MiGraph one except the
cover
goes over all the PCB, only the cart connection can be seen.

My guess is that it's a Disk Copier of some sort.
Or some type of Disk Drive Interface.
I don't know of any other ST devices that uses a ST disk drive connection.

Not unless it's one I haven't seen.

My Blitz Cable doesn't look anything like that.

Anyone have the Disk Drive with the built in Blitz stuff?

Not me - but I do have the Blitz cable/software, and I agree - mine looks
nothing like that cart the original poster showed.

There is a floppy connector.
It is some kind of one-to-one floppy disk copier.
Here I have a Replica-Box ST from 1987 TECHHart Handelsagentur ROM-Module +
Software that has 2 connectors.
 It copies every disk on a one-by-one basis by synchronising both drives.
I think this does the same with one external drive and the internal drive.

The Blitz Cable doesnt look like a Cartridge, it's a Cable. Unlike the Synchro Express that does look like a Cartridge with a DB25 Connector for the Parallel Port. And a plug for the external Disk Drive Port and a Pass Through Port for the External Disk Drive. When you use the Synchro Express it works best with matching disk drive Mechanisms. Look for the eject button to match Mechanisms. The Synchro Express makes your Atari Disk Drives act less Intelligent so Disk Drives are too stupid to fail copies due to copy protection. Synchro Express is my favorite ST Hardware Copier, 2nd is the Discovery Cartridge. Synchro and even the Blitz Cable are an easier way to Backup Copy Protected Software. It takes less intelligence to succesfully copy. Also, when copying, both A & B Drives work simultaneously. I dont have Synchro Express to sell, I love mine! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Perhaps it's a Blitz cable. The Blitz was used to copy software, including most copyrighted programs.

I'm looking for a program probably in Basic if possible, that when ran will check the Atari for what type it is and then run a program for the Atari it finds.

For example....

Program runs and finds a 1040STe, then runs Program X which is specifically made for it.

Or Program runs and finds a Falcon 030 then runs Program Z which is specifically made for it.

And extras that the program will find and report such as amount of Ram,
Video Display capability and etc. would be good too.
So that Custom programs can be setup for machine capability.

And if it would run in the Auto Folder or normal directory would be
helpful.

Anyone up to knocking a program like this out?

Send to your email as well....

I suppose I didn't think anyone else would care than me. Or perhaps
some case layout would benefit from them being on the side. Or maybe the
PCI signals have a shorter run if they are on the side rather than the
back, etc. But thank you for considering it.
Seriously :)

Thanks,
Mark

I really doubt there's some GUI application for such task, however, it's pretty easy to code.

Just look after cookie jar (_MCH, _VDO, _CPU, ... variables) and Pexec () (for starting the external program). The Atari Compendium should give you all the needed info.

I had forgotten about Sys_info, using that info and the Atari Comp. I was able to set up just what the customer needed.

Thanks for the info.

We are currently in the market for used Working and Non-Working Atari Falcons and CLAB Falcons, with/without hardware and software collections.

Just about any internal or external Hardware such as Digitisers, Scanners, Hard Drives (IDE/SCSI) DSP Audio Boards, Graphic Cards, old CPU upgrades, such as AB040, Nemesis and etc.
for the Atari Falcon030 or CLAB Falcon. Are needed.

Also, Working and Non working MegaSTe, 1040STE, 520STE and TT030's needed.

RGB and Mono monitors also needed, but these must be
in working or known to work conditon due to shipping charges.

Software collections for the entire ST-Falcon range are needed.
Techinal Manuals, Books and Magazine Collections too.

Doesn't matter if the hardware doesn't work, we may take it off your hands and give you a decent price for it.

Don't throw it away when you can get some cash for it or trade to hardware/software you need.

E-Mail your list of Items or Item to us at: phantomm@suddenlink.net

All e-mail is PRIVATE, unlike others, we do not sell or give your personal info out.

We appreciate your help and business.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

I for one always trusted their intent.  But after seeing how long the
EtherNAT took I had my doubts...  Not that I thought they were criminal or
incompetent but it's just a tough thing ;)
I'm glad to see something real.  I've been longing for the supervidel or
the CTPCI for a couple years now.  Really either solution will give me
some hope.--

Alan arvostuksesta kertoo varsin suoraan se miten alan ammattity�v�est� suhtautuu tekemiseens�. Siit� voidaan ottaa esimerkkej� laajasti. Ammattilaiset haluavat usein my�s j�lkikasvustaan ty�ns� jatkajia. Yritysmaailma on pullollaan ty�st� ylpeit� is�lt� pojalle siirretty� sukuosaamista. Mutta yksi ala loistaa poissaolollaan. Yksik��n ydinalan ammattilainen ei kehu firmaansa julkisesti netiss�, lehdiss�, ei edes asiaa kyselev�lle lapselleen. Jos katsomme ketk� julkisuudessa ydinlobbailevat, niin yht��n alan ammattilaista ei taatusti n�y lehtiotsikoissa, netiss� saati mualla. Vain rahalla ostettavia politikkoja ja vastaavia, jotka eiv�t erota uraania hiilimustasta taatusti.

Rupesin todella ihmettelem��n miksi. Ja ennenkaikkea KETK� ovat maassamme nyky��n ydinalan ammattilaisia? Heit� on maassamme tietysti tuhansittain, mutta keit�? Heille on yhteinen piirre se, ettei n�ill� ole esim. perustuslakiemme mukaista lakko-oikeutta, kell��n! Toinen keskeinen piirre on niinik�� lainvastaiset ylipitk�t jopa 12h ty�vuorot ja loputtomat ylity�jaksot vailla omaa p��t�nt�oikeutta. Kolmas ominaisuus on tekem�ns� ty�n arkaluontoisuus, mik� tarkoittaa orjallista vaitiololupauspakotetta uhkailu-ukaaseineen ydinjohdolta. Esim. OL-1,OL-2 ja OL-3 ty�mailla ei KET��N saa menn� vapaasti jututtamaan tekemisist��n ja m��r�ys on ehdoton, vaikka maamme pit�isi olla demokratia. Mik� kertoo my�s alan valonarkuudesta ja h�m�ryydest� enemm�n kuin paljon.

Niinik�� ydinty�l�isten palkkataso on enmemm�n kuin romahtanut loistonsa p�ivist�. Jos lasketaan Suomen ydinty�l�isten ansiotasot saadaan tyyty� jopa 7 euron tuntipalkkoihin! Reippaasti alle jopa siivoojaminimist� puhutaan ydinalan ammattilaisistamme keskim��rin kautta maamme! Kun viel� 70-luvulla ydinosaaja oli huippupalkkalainen ja arvostettu, on h�n t�n��n l�hinn� kansan hyljeksim� reppupuolalainen, liettualaisorja, turkkilainen, yms. joita katsotaan pitkin nen�nvartta, jopa kaupan kassalla, koska heit� arvotetaan toki my�s olemattoman orjapalkkaostovopimansa mukaan olemattomuuksiin. Ja tieto siit�, ett� suurin osa ei maksa edes veroja, saati sotuja ja vastaavia alentaa tasoa mutasarjaan kansan silmin.

Vaarallisesta ty�st� johtuvat moninkymmenkertaiset sairastumisriskit ty�tapaturmista, kielitaidottomuutensa takia tulee valtavasti onnettomuuslis�riskej�, samoin kouluttautumattomuuksistaan, s�teilyst� ja vastaavista lis�riskeist� kiistatta puhutaan ydinty�l�isiss�. Hyv�ll� ei n�ihin pitk�lti "slummiparakeissaan "huuhaileviin" ydinorjin suhtauduta en�� edes harmistuneitten kauppiaitten piiriss�. S�teilyvaaransa takia heill� on normaality�l�isi� ankarammat l��k�rintarkastusvaateet jne. Ydinty�l�iselle on kauhistus , jos lapsensa tulisivat samaan ty�h�n jatkajiksi.Voi vaan h�mm�stell� kuinka nopeasti

ydinalan mega-arvostus on romahtanut nykyiseen mit��nsanomattomuuteensa. heijastellen sit� pettymyst� mit� ydinvoiman loisteliaitten lupausten romahdettua tshernobyliin on tuottanut. Voi vaan arvailla, ett� kuinkan n�in totaalisen pettymyksen ala saa en�� jatkossa KET��N kiinostumaan sen yll�pidosta?

Does anyone have the example image of a tiger that used to come with the ST, preferably in a modern format such as gif or png? I was surprised that a quick search for "GEM tiger example atari" on Google didn't come up with anything, unless I'm just being dumb this morning.

Cheers,
Ian

Dear Charles, I'm not sure about this. I have a disk from TRIO Engineering. It
says Digispec v.1.22! I think it's for Digitizing in Spectrum format. I think
it works with a video digitizer that plugs into the STs Cartridge Port from a
company called ROMBO. I have the Digitizer package. It may be st control is on
the disk. Let me know if your interested by E-Mail. Please Reply!

Assembly (to assemble =3D montieren, zusammenbauen, ...) or assembly line
(Flie=C3=9Fband, ...)

BTW, http://dict.leo.org has a nice English-German dictionary and an
active forum about it.

Merry Christmas and best wishes,
Dennis Schulmeister

Bonsoir

Download on my homepage or directly in the folder
http://rajah.atari.org/files/ -> cresus11_uk.zip (220KB)

News in this multiple banks accounts manager:

- fix data corruption in transactions types table
  (desynchronization between STREAM.CDB and STREAM2.CDB when
   creating or deleting a type or ordering the types list)
- fix possible crash when inserting new type of transaction
+ $F% instead of $F&: speed enhanced, visible on ST and Falcon
+ archiving using DEFLATE.LDG and MEM.LDG instead of .TTP helpers
   - no more long pathnames problems
   - no more crash of ZIPJR.TTP on 060 CPU
   - filters are also saved
   - use InfoZIP unzip or KK Commander instead of STZIP
   - needs 800KB free RAM (if not, deflate error)
   - to install this, the LDG and other files are in the GOODIES folder

Voil�.

For the curious GFA coders, the code is simplified: zip_new and zip_add
(on file at a time). These zipping functions are a bit more reusable in your
code than the shitty KKcmd code.

Have now to work on small release of Litchi and KK...

Hello,

I haven�t used an ATARI for internet a LONG time, but I still have my former TT emulated via MagiC-PC on my PC. I just checked the folders and have seen that years ago I had installed STING (not STIK) from Peter Rottengatter on my (now virtual) ATARI. So here is the folder and file name arrangement:

In my "AUTO"-folder there are 2 files, which are the STING.PRG itself and a simple Textfile called STING.INF that just contains information of the folder, where the actual STING related stuff is placed (in my case there is only one line in the file: "C:\STING\" (without the quotes).

So in my case the folder has to be on C:\ in a folder called "STING". In this folder all the rest of STING is placed. There you also find the file DEFAULT.CFG, which contains in my case the following information:

```
#
#  This is the STinG relevant stuff.
#
ALLOCMEM    = 256000
#
THREADING   = 50
FRAG_TTL    = 60
#
ICMP_GMT    = -60
ICMP_AD     = 10
```

```
ICMP_FLAG   = 0
#
TCP_PORT    = 1024
MSS         = 2048
RCV_WND     = 4096
DEF_RTT     = 50
DEF_TTL     = 128
TCP_ICMP    = 1
#
UDP_PORT    = 1024
UDP_ICMP    = 1
#
DNS_CACHE   = 64
DNS_SAVE    = TRUE
#
#
#  Here starts the client relevant stuff.
#
# Used by the Dialer :
#
DIALER      = 127.0.0.1
#LOGIN_BATCH = C:\STING\DIALER\LOGIN.BAT
#
```

You see, besides some basic TCP/IP parameters, the last line shows the location of the dialer login script...

So, go for STING by Peter Rottengatter. There you should also find a hypertext for STGUIDE, which should give all the information you need.

Best regards,
Mario.

ok all questions answered,

it was released 1988 as it says on my original disk

by  trio engneering .

it seems like a more, less common commercial release ,
 as it comes in a nice grey and white glossy card board
box....professional apperance...for a release in 1988

it does state that its graphics software ,
but it also mention in detail on reverse of the box how its a script
language
to control parts of other programs , which assemble addons to existing
programs
```

the inner workings can be harnessed to build programs from other
programs ,, using simplified basic language expressions...
for next do loop while wend.........expressions

ben might be right ,
it could be a part of digispec....i dunno , he would have to send me
a picture or maybe email me the stcontrol part of digispec , in order
for me to sift things out.

i am interested but really have never used st control before so its
not a must have , but just a keepsakes thing where i want to restore a
corrupt disk in my collection.

charles

Bonsoir

Download on my website or directly in the folder
http://rajah.atari.org/files/ -> litchi11f_uk.zip (110KB)

News in this GEM FTP STinG client:

- fixed: read/save now correctly in the configuration file, the choice
  if already existing file (misc options).
+ lower memory usage, when manipulating long lists of files.

Regards

Newsgroups: comp.sys.atari.st, comp.sys.atari.st.tech
Subject: Re: HELP WITH STIK!

Hello,

I haven?t used an ATARI for internet a LONG time, but I still have my former TT emulated via MagiC-PC on my PC. I just checked the folders and have seen that years ago I had installed STING (not STIK) from Peter Rottengatter on my (now virtual) ATARI. So here is the folder and file name arrangement:

In my "AUTO"-folder there are 2 files, which are the STING.PRG itself and a simple Textfile called STING.INF that just contains information of the folder, where the actual STING related stuff is placed (in my case there is only one line in the file: "C:\STING\" (without the quotes).

So in my case the folder has to be on C:\ in a folder called "STING". In this folder all the rest of STING is placed. There you also find the file DEFAULT.CFG, which contains in my case the following information:

```
#
#  This is the STinG relevant stuff.
#
ALLOCMEM    = 256000
#
THREADING   = 50
FRAG_TTL    = 60
#
ICMP_GMT    = -60
ICMP_AD     = 10
ICMP_FLAG   = 0
#
TCP_PORT    = 1024
MSS         = 2048
RCV_WND     = 4096
DEF_RTT     = 50
DEF_TTL     = 128
TCP_ICMP    = 1
#
UDP_PORT    = 1024
UDP_ICMP    = 1
#
DNS_CACHE   = 64
DNS_SAVE    = TRUE
#
#
#  Here starts the client relevant stuff.
#
# Used by the Dialer :
#
DIALER      = 127.0.0.1
#LOGIN_BATCH = C:\STING\DIALER\LOGIN.BAT
#
```

You see, besides some basic TCP/IP parameters, the last line shows the location of the dialer login script...

So, go for STING by Peter Rottengatter. There you should also find a hypertext for STGUIDE, which should give all the information you need.

Best regards,
Mario.

I want to use my ST Xformer to move Atari 8 Bit files onto a 5.25" Diskette! I want to hook up an 8 Bit Disk Drive like an Indus GT or an Atari 1050 using the Xformer Cable and emulator software. I dont want to run 8 Bit Software on my ST, I just want to transfer files to 8 Bit 5.25" Disk so I can run Software on my Atari 800xl! Is this possible with the ST Xformer Cable? Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Here is what the original STiK documentation says, which can be found on Flinny's page:

http://www.flinny.demon.co.uk/

Quote: "You need to create a STIK_CFG folder (directory), this can be located on your boot disk. Either C: if you have a hard drive or A: if you have a floppy only setup. If you do not want to create a folder on your boot drive, you can create a text file called STIK_DIR.DAT, this file will simply be one line that gives the path of your STIK_CFG folder.

Copy DEFAULT.CFG and your default dial script to the STIK_CFG folder.

Copy STIK.PRG to your Auto folder.

Some notes on STIK.PRG location.

STIK.PRG (install in Auto Folder after Hsmodem, can be ran
from Desktop under MiNT). If you desire to run it from the Auto folder
it must run before MiNT. Actually with Naes it doesn't matter so much
where it is ran from. After MiNT seems slightly better though. If
you find out differently, please let me know.

Copy Qdial and it's RSC files to your hard drive. This can be where ever
you wish to have it located. You can run Qdialer as an .ACC file. If you
choose to have it as an .ACC place it and it's .RSC file where ever you put
your .ACC programs.

Edit DEFAULT.CFG and DIAL.SCR to match what your system needs for
connection.
More details of this can be found in the STIKVAR.TXT and the EXAMPLE.CFG
files.

Reboot your system and run Qdialer. Edit any options you may want to change
under the tools icon and save it's config file."

Good luck!
Best regards,
MC.

I have a very RARE Indus Disk Drive for the Atari ST except its a 5.25" Indus
made for the ST! It works, it's complete in the Original Box! Please Reply!
Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Indus GT-1000; Indus; 5.25" Floppy Drive for Atari ST Computers. Plugs into
your ST as Drive B:\ the same as any ST Disk Drive except does not have a 2nd
14 Pin Din Disk Drive port to Daisy Chain another Drive! Formats Double Sided/
Double Density. Supposed to do Higher Density 5.25" Disks but I dont have Hi
Density 5.25" floppies to test them on. Comes with GT-1000, (2) Manuals, I/O
Cable, F.S.I. Utility Disk, Power Supply and Original Box. RARE..NIB.$200 U.S.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

I also have one with a 40/80 tracks switch to read both 360 and 720k
floppies.
But I wouldn't tell that it costs $200...

Guillaume.

I've got one of those too, but it's not the same brand.

Also, have a program that allows you to use Atari 1050 disk drives on the
ST as a ST drive. But you need a special cable.

I'll keep looking for it.
I've alot of software to go thru and list.

The name had me confused, as I recall a program with a similar name.
But did something different.

I'm interested in some info on the Atari STs 16 color palette.
What causes the ST/STE to be limited to 16 colors and is this limit also
in the Falcons ST/E Resolution Modes and the Falcons normal 16 color modes?

Would it be difficult to increase a older ST graphic programs palette to
more
than 16 colors, if it already works on a Falcon?

BTW, the program is not a game. similar to a paint program.

Every video chipset has a pre-defined palette and colours displayable. Its all digital. The ST's was limited to 16 displayable from 512/4096 (ST/STE), TT's was 256 displayable from 4096 and Falcon's was 65,536 displayable from 262,144. I think the 320x200 res's were limited to 16 colour on all the machines. The Falcon has a 320x240 mode that is VERY compatible given the right software. This res can display 65,536 colours (Falcon truecolour) as well.

The display isn't hackable/configurable in a simple sense. There was a shifter mod that added a second shifter to an ST/STF/STM/STFM and gave

it a palette of 4096 but apart from that I don't think anyone bothered.
There were a few video card options kicking around, mostly fro the
Mega's and the TT.

Also there were some programs that use a technique called palette
switching. This can fool the machine into displaying its entire palette.
I.e. 512 colours on an ST. This cannot be done from GEM/TOS AFIK. Thru
trickery it is possible to shoehorn 19000 colours out of an STE. Another
thing too, this switching technique is very CPU intensive, most of what
I've seen has been done in assembly. Have a look at a program called
Photochrome for the ST/STE.

> Would it be difficult to increase a older ST graphic programs palette to

> than 16 colors, if it already works on a Falcon?

Depends how it was written I would guess. Hard to say.

>
> BTW, the program is not a game. similar to a paint program.

Good luck ;-)

Mark

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Hello,

I upload [1] a small program XaMagiC which add some new AES function
- more appl_getinfo() modes.
- appl_control with the mode APC_HIDE, APC_SHOW, APC_TOP and APC_HIDENOT.

to MagiC.

Gerhard

X-Newsreader: NEWSie Version 0.96 (Atari)
Xref: g2news2.google.com comp.sys.atari.st:1230

Version 4.00 of TeraDesk open-source desktop for the 16-bit and 32-bit lines
of Atari computers is available at:

      http://solair.eunet.rs/~vdjole/teradesk.htm

Please note the new location; domain name has been changed because of
recent political changes :(  The old URL should still be available for
a while as:

      http://solair.eunet.yu/~vdjole/teradesk.htm

The main new feature in this release of TeraDesk is the ability to handle
large disk partition sizes- up to 2 TB,  which seems to have become a
necessity with appearance of large hard disks  or systems like Aranym.
Other improvements  include better formatting of displayed large numerical
values, automatic truncation of long filenames when copying to FAT
partitions, support for links to relative paths, etc. Besides, a number
of (not very critical) bugs has been fixed.

Have fun, and a Happy New Year.

Djordje

Thank You very much for your help and the Software! I have the Xformer cable
and the transfer software but I dont know how to do what I want it to do. I
dont even know if it's possible. I just want to move 8 Bit files I downloaded
from the Internet. Take them from my ST Hard Drive, using my XFormer cable so
I can transfer files onto a 5.25" floppy then move it to my 800xl?Please Reply!
Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

That's an area, I looked into a few years ago, Not sure if something exists
to do that
from a ST floppy format. It's possible but I've not really tried it that
way.

I have gotten good at replacing Yamama sound chips, thinking that was the reason the printer port was dead.

This time, there is no convenient bypass capacitor next to it to see what end is plus and what is minus with the diode setting on a digital voltmeter, so I connected power jumpers directly to the power and ground pins of that chip, and my printer port works again.

That chip may be found in the Chips and Chips .hyp file for ST-Guide, if you want to see what pin is what, and again you can confirm this with a digital voltmeter (or analog, if that is what you have) between the two relevant pins and the power supply connector pins.

Depending on what you use for glue to hold things in place, it might be a very good idea to line the lower case with waxed paper, just in case.

Jim

Dear Russ, I've added at the bottom a post from Michael Current. He's A great treasure and Atari Resource! Someone E-Mailed me the game I was looking for! I was able to transfer it to a 5.25" Disk so I can play it on my 800xl! I would like to be able to transfer any file this way using the XFormer cable that I have! Unfortunately, the Transfer Utility wont transfer just any file. I need to transfer any file from my ST to 8 Bit using the Transfer Utility!

=-Thanx-=

Subject: Welcome to comp.sys.atari.8bit!

Archive-name: atari-8-bit/welcome

Posting-Frequency: 10 days
Last-modified: July 20, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Yes, I neglected to mention the FAQ.
Michael Current keeps up with URLs and
sources for A8, an excellent source.
I have my own archive, but it isn't accessable
except to say something needed and let me search.
I don't have the POOL disks, but I do have
a lot of stuff, CTH archive, Holmes archive,
a German archive, and my own collections from
the days. ftp.pigwa.net seems extensive, maybe
too extensive, as I can't find stuff on it.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Right! The original tiger was b&w and came together with the 1st Word
texteditor, or...?

One of the examples in Timeworks contained a bitmapped b/w image of a
tiger.

Thanks for the info.

I don't think it's the Migraph Hand Scanner cartridge interface,
because my device have a male DIN 14 pins connector, like the ones
that you plug in FDD, and I guess the scanner, even having a DIN 14
pins connector will have a male connector as well.

I guess you're right guessing that it's a Disk Drive Interface.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell

you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

If it is really a monochrome picture, why using jpg ?
For mono gif or png are more efficient I think.

And what about the original Atari *.img format ?

And so does Imagecopy 4, gemview, zview, etc ... on Atari machines too.

CU,
Martin

Indeed gif or png would have been a better choice.
Anyway I've uploaded tiger.zip to the Belgian ftp-server. That archive
contains the tiger image in 3 formats, .Img, .gif and .png.

TTFN,
Martin

anyone have a rough estimate of how many Atari 16-32 bit owners/users there are in the USA/Canada and OverSeas that are Active with there Computers?

the activity in this NewsGroup suggests that alot have stopped or moved on.

I know of a couple of friends that are working on some Atari related projects and may release
some of the software/hardware if there are enough Users left that may actually pay for
shipping costs of a Disk or CD.

Or is there other reasons, why Atari owners/users do not use this newsgroup anymore?

Maybe some of the Atari Dealers that are left can give a number of customers in the past year
so we can get a feel of how little of us is left.

IMO the reason there is not much traffic here these days is because poeple became fed up with the time and cost of dealing with the amount of Spam and Flame wars that regulary appeared here espically when Sinclap posted anything. This resulted in a lot of people moving to forums where such things are easily stopped because...
a) Requiring an account makes it hard to spam whereas spam bots can easily invade newsgroups.
b) Threads that descend flame wars of otherwise get out of hand can be locked so that no more posts can be made thus depriving the fire of fuel
c) The accounts of those who Spam or Flame can be closed and so such people eventually get fed up of having to open new accounts to access the forum and go away.

Ironically most of the reasons above seemed to have declined in proportion to the decline in posts here, presumable they think it is no longer worth the effort but may change there minds when should things pick up.

In addition to this I am sure there are a few who have left the Atari scene and some for who life has got in the way and have not had the time to use their Ataris/post. There is also the odd new addition/returnee to the Atari world but in a time where things like Facebook are prevelent most companies are using forums of them are probably more used to web forums than newsgroup

or not old enough to really know what newsgroups are, plus unlike newsgroups
you can post/PM someone the file they want or post an image help explaine
what you are talking about on a forum.

There are many Atari forums around such as Atari Age (www.atariage.com)
which has a regular flow of ST/TT/Falcon post. Jaguar Sector II
(http://www.jaguarsector.com/index.php?) which as the name suggest is mainly
Jaguar orientated, although it does have forums for 16/32 but computer is it
less active. Another is Atari Forum (http://www.atari-forum.com/) this
appear to be purely for all things ST/TT/Falcon, there are probably others
but check these out.

SgM

I still have my Mega ST, a 520ST, and a MegaSTE 4MB that are all in storage.
Have a couple of mono and color monitors including the prized PS3000 model.
Just havent un boxed them in 3 years since I moved into our new home.

LS

Finally, after many years of intermittently hard work and letting myself be distracted by the many beautifull things in a world that is not entirely made up/out by/of computers, AHCC has reached a usable state.

AHCC is a replacement for the renown but propriatary Pur C compiler.
AHCC is binary and almost source compatible to Pure C.

You can download AHCC from my homepage (in sig).

The version number is 3.b1
3 after Sozobon v2, b1: the first beta release.
The language version is C89.

Please, please, before you go fiddling, read the hypertext in it's entirety first.

If things are unclear or if you think the hypertext is too concise or incomplete, send me a mail.

Have fun.

Now, there's a name I have not seen for yonks - I have not had an Atari
since I the Tramiels destryed the company and I moved to Apple - I
still look in here periodically to see if anything is happening - what
happened to the Hades and the other Atari type thingies that were being
produced in Europe.

Atari was a great machine for the day - can't help but wonder what it
would have become if things had been different

Hi,

I am glad you still have your Atari stuff.

Do you plan on using it in the future, or would you be interested in selling or trading some of your Atari Items?

I could use a good Mono and Color monitor and a MegaSTE.
Maybe we could work out sometype of deal for some or all of it,
if you are interested.

I'd be really interested in the MegaSTe, Does it have a internal
Hard Drive?
Any upgrade boards in it?

I don't know much about the PS3000, Is that a Color VGA made by Atari?

I am looking for 3rd party hardware and software for the STs-Falcons too. Things like graphics cards, Digitisers, Samplers and odd bits of hardware and software. TOS Upgrades/Switchers, CPU upgrades and Speed boards.

BTW, did you ever have a CDROM drive connected to any of your Ataris?

If you plan on keeping your Ataris, I do have some hardware and software that you might be interested in when you get a system setup.

Do let me know if you are interested in selling/trading some or all of it.

And if there is any Atari Items that you are looking for, I may be able to
help you with that. I have alot of different stuff.

You can e-mail me at phantomm@bellsouth.net or phantomm@suddenlink.net

Thanks,
Barry

Hi,

Many thanks for AHCC that I don't already tested, but I will !

That's really kind of you to suggest users to report directly.
I hope not to importunate if I do. I'm always looking forward
to know about projects you're developing. That helps a lot !

Best regards,

> Just havent un boxed them in 3 years since I moved into our new home.

Wow, I can't imagine going 3 *days* without using my Atari's, let alone 3 years!

I've got my highly modified Falcon, Modded Mega ST that runs my BBS, and now the STacy I'm working on. All of these get -daily- usage. I guess my Mega STe and 800XL get the least use, but they are still used weekly. :)

Still great machines for me each day. :)

But I'm with ya, and I guess all of us will always wonder about the "what ifs", if Atari had done things differently, had listened to the users and developers...

Barry, I'm not sure about hard numbers - but I know there is still quite a
bit of traffic at some of the more popular Atari websites, like AtariAge
and Atari Forums.

Still some life left in the old dog, my BBS is getting about 40-50 calls
each month. :)

Well, that's not bad. I think we may see more BBSs appearing in the
future. With the Net being the new Phone Line.

With things being the way they are, looks like the old may end up
becoming new again with some technology.

I'm still active. Over christmas I started to delve into major changes
into GEM instant messenger. I really got far and really improved it but
I ran into a major roadblock. The libfaim that I use doesn't support
the buddy icon server protocol which is required by most clients these
days. I've started to make said changes but.. yeah... effort.
Though it is basically quiet, still in the planning stages and not
definitely or moving (read: extremely vaporware) there is some movement
behind coldfire hardware again. I myself have most of what I need to get my
coldfire board running. I still need to get an ethernec but it seems
nobody is selling them. I also think they're not worth $75 or whatever
people keep wanting to charge for them so I'm thinking about produing my
own batch but within the files there are not suitable files to send to a
PCB house :(

I sued to use mine everyday, and logged many an housr with BBS's around the
country. But after working oh so many years ago at a job reparing PC's at a
place called Incredible Universe, the working for Bell and Howell and CompUSA
I basically moved on. Hard to resist the PC urge when i could get items at
coast from many of my places of employment. So now , its a matter of space and
time. Back then my wife and I didnt have 3 sons, all getting into the teenage
years now. I have way to many concoles and i need to spend my time with the
kids and not my game systems or Ataris or PC's now for that matter.

I will brush off the dust soon and relive the fun but i can guarantee now that
probalbly half the disks might not work anymore, and no online useage for me.

If anyone wants some of the stuff from the old Stornmbringer BBS, software
that is, i can dump it to CD or DVD for a small cost for postage.

re,

Being a moderator of a 1000+ members forum myself I'm afraid I have to disagree. Spam really is a big problem in forums. Not due to users posting nonsense but actually spam bots also crawl forums and post all kinds of spam messages there - including posts with explicit sexual images!

The solution we found for our forum is that we require users to validate. This is a new user's posts are not shown to the public but only to us moderators. We than approve or delete those invisible posts and based upon that end a user's validation period or deactivate his account.

PS: Me too, I'm still a regular ATARI user. I'm mainly using my Falcon for Cubase MIDI work. :)

Yours sincerely,
Dennis Schulmeister

I have a couple of Atari's. 800XL (missing some cables) and 1040st.
they work but need some things made, mouse fixed.   While the 800

doesn't matter to me, i'm still planning on getting the 1040 up and
running good. Need to finish the amiga monitor cable for it.

I'm a old hand at IRC, been there, done that.
#atariscne and some of the other ones,

I got some help there with problems in real time. But not everyone is
on-line at the same time. When using a News Group, the posting can be read

by someone who may need to at a later time.

I'm not knocking any area where we can freely express our ideas and exchange
info.

As for Sinclop, I've not seen anything posted from that Bot program in
sometime.
Unless you are refering to anyone who happens to use a PC as a Sinclop.

Hey Mark,

Good to hear from you.
I am glad you are working on that stuff.
If you get the files needed to produce a batch, do put me down for at least
one of them.

BTW, in what format do the files have to be in, in order to be used by a PCB
house?

Reason I ask, I have some projects, mostly just hardware and would like to
go thru the process of getting some of them made. But need some guidance
on how to go about it.
Maybe if you have some extra time, you could post or e-mail me how to
get a Atari hardware project made/re-produced.

Barry

To be honest I don't know.  I think there are gerber files and drill
files that are common amongst them all.  I think from a scooter PCB file or
an eagle file you can generate the gerber and drill files.  I will be
experimenting a bit with this.
Thanks,
Mark

Well, I'm still here, although I don't visit CSAST much anymore. When I got DSL about a year ago I stopped using my Falcon for Internet work, and most new documents are being done on my Macs. However, I still print older documents on the Falcon from time to time, use my SCSI scanner and SCANX often, and play the occasional game of Railroad Tycoon. Right now I'm visiting because I'm looking for documentation on Mint. It's time to try installing it on my CT60, which arose from the dead a few hours ago. (Still don't know what I did, but it's working.)

Glad you're all still here.

Galen

I've just rebuilt a Falcon 030 and have been looking over some of the Modifications and Upgrades that one could get for it.

I left the motherboard in the factory condition.
It has a FPU, 14megs, TOS 4.04, Expose' Digitiser, 2.5 IDE Hard Disk. The motherboard has no past modifications.

I'm looking at increasing the BUS Speed if possible without doing a major upgrade involving alot of wires or replacing the CPU.

Have some Questions, for the most part they have to do with a Stock Factory Falcon with TOS 4.04. No other Software involved/installed except for the original Disk Software from Atari. Such as the Control Panel, GDOS and etc.

What hardware on the motherboard is considered the actual Bus?

Where does it actually start and to what parts/chips does it branch out to if it does branch out?

The AES

On a Stock Falcon using TOS 4.04 what does the AES actually mean/do?

NVRAM

I remember alot of discussion over the NVRAM.
To my knowledge, the clock which keeps the date/time is located in the NVRAM Chip.
If so, can one remove the Top of the Chip and replace the battery?
And what does the Battery look like, is it the Top part of the chip or some type of watch battery??

Does this battery also keep the NVRAM settings when the machine is OFF?

Does the NVRAM have anything to do with the Factory Control Panel software or the Newdesk.INF file?

Are there any other things that the NVRAM does that could cause trouble if the battery is bad/weak?

I remember a collection of Falcon modifications and fixes that were in a .ZIP format. Really well done. I think it created by someone in Germany and may have been called DOITF030. Anyone know if this is still available?

Any help with the above is much appreciated.
Any suggestions on a good solid BUS Upgrade or other modifications for a Stock Falcon?

We have been working on a ST-Falcon CD for a few weeks now.
And Prior to the release of CD #1 we are going to release a
Special Intro CD.

In order to get the Special Intro CD, contact us by e-mail for details.

Put INTRO CD as the Subject and send us a brief message and we
will contact you by e-mail on how to get this Special Intro CD.

The Intro CD will help determine what goes on the Main CD #1.
So if you want this CD then let us know.

e-mail us at: No Spam)phantomm@suddenlink.net(No Spam

I've been looking at PCBoard Designer by Abacus Software.
It's abit old, but if a PCB House can use the Printout that it does
then that will be half the battle.

Hi,

I've been asked how to install them on the french atari newsgroup.
I thought it could be of any interest for you to get the informations.

Follow that link for explanations and download:

http://pagesperso-orange.fr/gtello/mint.htm

I've added a table with the memory occupation according to each system.

Guillaume.

I have a MSTE/TT version of the Nova, I would think one could use it in a
Falcon with
the Correct Adapter. Does anyone happen to have a spare Adapter?

Can you tell me what wire 3 from the CT2B is for?

Some sources have it connected to pin 1 of socket U63 and some well...

If my sources are correct, The Nova Falcon was sold with either 1MB or 2MB
at the
start. It was really expensive, and the cost between a 1MB or 2MB Nova was
alot.

There seems to be a few different models of the Nova card, such as the
SuperNova.
Memory and graphics power determine the name of the graphics card.

The info I have is,
The SUPERNOVA 64 was a 2 or 4 meg VRAM and the NOVA PLUS 64 was 1 or 2 meg
DRAM.
```

Also, there seems to be a Mach 32 version, 1 or 2 meg D/VRAM.

There were versions for the Falcon, MSTE/TT. It also came in the "EAGLE" at
one time so say
some.
The Nova could also be used in a Mega ST using a Mega Bus adapter.

I'd like to find a source for all the software drivers and etc that were
created for the Novas.
I'd like to see a few good close up pics of the Mega Bus adapter and the
Falcon adapter.

```

I've a few projects that I've been working on, and after going thru some boxes,
I have located my fairly large Atari software collection.
Alot of Atari ST/E related software on disks already in the .ST file format.
Many of these programs especially the games have been cracked and have nice demos, intros and etc that run before the games loads up or at the title screen.

Alot of effort went into doing these and I must have several thousand files in the .ST
format. (I've collected this stuff for years)

Is there enough interest in these files for me to create a few CDs and make available?

Or should I just leave them in the boxes?

Many are games, but also have alot of apps/utilities/fonts/text files and
etc.
These are from the 80s and early 90s.

INFO : it will possible to cut the PCI slots board to use only 3 or 2 slots.
It will be possible too to cut for only 1 slot BUT you will need to solder a big wire between CT60/63 & the PCI slot to furnish the +3.3V.

Some modifications on the CTPCI and the ATX tower drilling draft is available in the technics area :
http://www.czuba-tech.com/CTPCI/english/welcome.htm

Hi,

I have the answer now: The NOVA is limited to 32k colors and the SuperNOVA can go up to 24 bits or 32 bits resolutions (800x600x32b requieres 2Mb of VRAM)

Pretty cool. First impression and tests: the drivers have been improved in speed and the TT with SuperNOVA is as fast as my other TT with Nova and Cattamaran (concerning GEM/VDI calls).

Guillaume.

I'm on thin ice here, but I don't think you can. IIRC there was a
successor to the Mighty Mic 32 that was limited to 64Mb.

Hi,

There is already a lot of SW downloadable on WEB. Practically all menu disks (games with intros, apps) and programs separately. For instance on planetemu.net . Some CDs, DVDs are still available too.

Of course, there is always interest for good stuff, especially if it can not find easy. It would be good if you make some list before writing CD, DVD. Best if you post about this on Atari forum: http://www.atari-forum.com/index.php

Fair enough, I'll go ahead and put 'em on CDs and make a list available
for comment.
This way at least, the files will be on a safer media. It will take some
time however.
Even though most are already in the .ST format, the shear number of
disks to copy over
and sort makes it a huge task.

I'm not sure that the NOVA is limited to 32k colors.

The NOVA Plus 32 with 1 meg of Ram will get you....
640x480x24bit
800x600x32k
1024x768x256

Also the graphics cards memory effects the number of colors you can get,
in a particular resolution.
My understanding of this is that if you upgrade the Nova's Memory, you can
get
more Colors in Higher Resolutions.

I think that any Nova will give you at least 640x480x24bit,
but I may be wrong as I have no info on a graphics card called just
a "NOVA".

BTW, anyone know about a graphics card with the main chip labeled as
TRIDENT?

Bonsoir

Bug report on my Cr�sus (banks accounts manager) : while waiting for the patch/next release this december, please,

-> do not sort/change order in the transactions types table
-> do not create and do not delete a type of transaction

These actions desynchronize the files STREAM.CBD and STREAM2.CDB
When using accounts transfer, wrong type of transaction may be written of the account target, or a crash (null-pointer) could happen when selecting a type in the types list or when creating/modifying a transaction.

The bug is fixed on my computers, but please wait for the next release this end of december. I have to implement archiving inside Cr�sus, using DEFLATE.LDG (the helper ZIPJR.TTP is not CT60-friendly and cannot be done if pathnames are too long)

Sorry for the inconvenience.

I possibly would be interested. Can you provide a partial list of the programs that are on the disks?

To me, the more the merrier. I would not want to delete any of the slots. I
had four slots on my Hades and that was not enough. I would have loved to have
more.

Out of curiosity: what did you have in them? I had no idea there even was a many as 4 PCI cards available for Atari hardware.

Cheers,
JFL

Not at the moment, sorry.
But, alot of it I have not seen anywhere else.

Not saying that someone doesn't have it, but there is some really interesting
software and etc.
Alot of the files are in .MSA format too.
In the games, what I find interesting besides the games themselves, are the
built in cheat modes, and demos/music.

If I have to test every .MSA file, by making a working ST disk, then it's
really going to take some time. I've already made a shoebox full of games
from .MSA files and haven't really made a dent into it.
These all worked on my 1040STE, except for a few which I suspect will only
work on a ST/STFM.

To speed it up, I'll have to just copy them over to CD/DVD make a list
and get someone to help check the files before a final release if it comes
to that.

Also there seems to be a ton of Music related software.

I can't say what Edward had in his Hades, but in my Milan I have a
graphics card, two network cards and a PCI Soundblaster. I also have a
SCSI card and a TV card I'm not using.

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Hi charles,

Sounds fimilar to me...not sure at the moment, I'd have to do some searching for it.
I'm guessing that its sometype of application?
Can you tell me about what year it was made and if it was a commercial release?
Also, what does it suppose to do?

I've seen you post this request for a factory MegaST4 before.
Have you not been able to locate one?

Are factory MegaST4's abit rare?

Just curious, I have one of these, but don't want to part with
it at the moment.

BTW, do you have any motherboard parts for a Mega ST?
I'm looking for a Video Shifter chip. Normally these are socketed.

I havent ran this post in a long time, but yes, I was able to locate one.

I need them for my own personal use. I need to setup some Mega ST4s for myself! I also need Backups. My own personal Mega ST4 needs to be replaced. I'm looking for Mega STs like the ones listed below for my own personal use. But if someone should offer me a different Mega ST, I'd still be interested!

> Are factory MegaST4's abit rare?

Not really.

> Just curious, I have one of these, but don't want to part with

Good for you.

> BTW, do you have any motherboard parts for a Mega ST?

I'm so very sorry, I dont have a Mega ST motherboard.

> I'm looking for a Video Shifter chip. Normally these are socketed.

I can only recommend Best Electronics or B & C ComputerVisions. On the other hand, I have some 520s and 1040s I can sell, as is. For Parts! Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

From: Bravo Sierra Computers <atari@aracnet.com>
Newsgroups: comp.sys.atari.st, pdx.forsale
Subject: Wanted: Atari Mega ST4!

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a
stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6
Chip TOS set as laid out on the MotherBoard. The important feature is this. The
built-in floppy must be the Chinon. You can tell, the drive has an eject button
centered under the floppy slot. The button is wide, short height & slanted on
both the left & right side. This Chinon Drive is the Most Common ST Disk Drive!
And the case needs to be unaltered, not cut up to replace a drive with an
incompatible eject button. Please direct All
replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I
need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer:
I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that
again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it.
I want the Mega to come that way from the factory. I don't trust most other
peoples tech work. I'd rather have the RAM put in at the Factory.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

I want to use my ST Xformer to move Atari 8 Bit files onto a 5.25" Diskette! I want to hook up an 8 Bit Disk Drive like an Indus GT or an Atari 1050 using the Xformer Cable and emulator software. I dont want to run 8 Bit Software on my ST, I just want to transfer files to 8 Bit 5.25" Disk so I can run Software on my Atari 800xl! Is this possible with the ST Xformer Cable? Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

IIRC, there must be a folder nammed STIK_CFG at the root of your
boot partition, which should contain the config file, something
like DEFAULT.CFG.

May this help.:-)

Although it is good to see a new Atari programmer if you are looking to make money programming for the Atari you are on a fools errand IMO as most new software released is done so freely. There is some application software such as HD Driver that are good enough and used often enough to warrent paying for them but they are in the minority.
If you have not found them you might want to try asking your questions somewhere like Atari Age, or Atari forum as forums are now more popular than newsgroups, primarily becasue thay do not get spammed.

Stephen Moss

JayMSA works good. If you work under TOS, make sure to disable the CRC
feature (both for imaging and writing). This did boost the tool's
reliability for me by several 100%.

I've always used ImageCopy for this.

Has someone seen this card with "PROTAR VME ECME VIDEO" on it?
```

A VME graphic card for Atari Mega STE with VGA output and the serial output too.

Guillaume.

Hi,

Most likely the "serial port" is a 9 pin video port. So just a video
card.

     We found what it was (on the french Atari news group)
     a ProScreen VME graphic card that gives to the Mega STE the TT High
resolution (1280*960 mono).

     Guillaume.

I checked some of my software storage for this, I've alot of DTP/WP packages
for the Atari.
I located, TimeWorks Publisher ST package. It has 5 Master disks, a

Samples/Artwork disk,
and 3 Graphics disks, such as People,Places & Things.
I have the original Manual and Reference Card which are in a 3 ring
binder/book.

Is this one the same as TimeWorks Publisher 2, or is this a older version?

I used this for awhile, until I got PageStream.
Also, have Partner ST, another TimeWorks program, which has a nice Thesaurus
among other
things, that can be used with other programs or by itself.
All of the TimeWorks packages are good stuff, IMO.

If this manual is the one you need, I can let you borrow it.
If it's the wrong one, then I'll look and see if I have it.

It is refreshing to read that you are programming on the Atari, this
platform can
use all the programmers we can get.

If you want to make money with a program. I would go with something that
could be
transported over to the other platforms, PC/Apple.  Such as an original
game, or a useful
application/utility. Do it on the Atari and get feedback from users to see
what they think of it.

If it's good, then look into doing a version for another platform where the
number of users is larger.
Best of Luck and keep programming.

In my opinion it is a great loss, to just give up posting to the Atari
NewsGroups.
I've not seen alot of spamming in here, and one can use filters and etc to
block
spam.
I'd really like to see some activity in here for a change. Getting together
to exchange
info, ideas and etc is the best way to keep this Platform fun and exciting.

And for the formats Imagecopy doesn't handle, try Smurf. There is
also a set of FALCON IMAGE UTILITIES by SKWare One, meant for the
Falcon but some working on other STs as well. Other options are
GemView and Nview.

Regards, /Peter/

I ended up finding that I couldn't run the diag on this particular computer with the ST 2MB RAM expansion board. If I had the board remove the diagnostic software would run. Quite weird.

Hey Jim,

Do you have a website with photos to help show what you did? Maybe some component references. Trying to follow your instructions is a little difficult without some additional clues to the specific locations you're referring to.

Thanks,
Glenn

No, not yet, but I did mail myself a copy. It probably helps to have a field service manual, and secondly, I am not sure I solved all the bus problems. The DMA port supplies most of the printer port, and that does not work, possibly because I killed it. And, after getting all the screws back in, something came loose in the floppy drive circuit, and right now I have little time, and somehow, more important things to do.

If you do not want things on the external SCSI bus, the problems are fewer.

I do have a digital camera that should work with photopc for MiNT, batteries, and a storage card. Just not enough time at the moment.

Jim

Bonjour

Download on my homepage or directly in the folder
http://rajah.atari.org/files/ -> kkcmd14_uk.zip (160KB)

News for this bad clone of Total Commander:

- less memory usage (when long list of file to transfer)

- ZIP archive files support (PKZIP). STORE and DEFLATE methods only.

The zip file is opened as it was a folder. Carefull when adding a file, if same name, the old one will be deleted.

When deleting, zip file is copied into a temp (.zmp) to take only the wanted zipentries. So you should have a hard disk drive.

DEFLATE archiving and INFLATE extraction are managed by a LDG library called deflate.ldg (zlib port, see the KKcmd sources), so install the LDG system. What you need is in the GOODIES folder of KKcmd.

CAREFULL: DEFLATE compression is not yet reliable. Seems to work okay.
Winzip, Macoxs, unzip (from zlib) inflate well, but STZIP fails very very badly.
So if you have to make public releases, keep using STZIP (carefull also there, STZIP corrupts zip files when modifications/deletes).
Or tell explicitly to use KKcmd.

INFLATE seems to work well.

Generally speaking, perform some tests with KKcmd before giving important files (ie test with winzip, macosx unzippers, zlib, infoZip...).

One more remark: in Options, misc, unselect free disk space verification under MiNT or Aranym or MagiCMac. If there's too much space, the function returns false.

Voil�.

Greetings,

Have a question regarding the Centurbo II B version.

Does the 32Mhz Clock signal from the DSP have to be connected
to the Videl Chip in order for the CT2B to work correctly?

Thanks.

Please, do some hard tests on your machines/environments before
you consider KKcmd to be reliable.

Except STZIP unzipping, it's working as expected at home, but the thing
is still experimental.

Regards

Pierre

Hello,

Does anyone know the difference between the NOVA graphic card and the NOVA Plus Graphic card?

Is the difference in the VME adapter? or is it in the ISA graphic card itself?

Guillaume.

I believe the difference is in the ISA card. A friend of mine had a Nova
Falcon with a 4Mb ATI Mach 64 with VRAM, I had one with a 1Mb ATI Mach 64
with RAM. The former was (IIRC) a Nova Plus.

Yes. Good luck in finding an ISA Mach 64 with VRAM though ;-) I found one
on eBay a while ago, with a starting price of $199!

May not be 100% true IIRC.  I have a super nova that was originally a
Nova TT.  It wasn't originally mine and the original owner had to get
replacement GAL's from the manufacturer for the VME card to complete the
upgrade.

Thanks,
Mark

The CTB2 is not "aware" of whether the 32mhz clock is connected to anything or not. The absence of this clock will only effect VIDEL modes that enable the external video clock input. The default TOS resolutions do not use the external clock, but you'll need it if you want the higher resolutions/bit depth the VIDEL is capable of.

If you use a screenblaster or equivilent device you can feed the VIDEL an external clock via the video port of the falcon and achieve higher resolutions even though the CT2B clock is not connected.

Hi,

I run atari-source.org and it loads for me. It's not loading for you?
I know it hasn't had updates for some time :-/

Thanks,
Mark

There are probably differences between the TT and Falcon versions. I'm
only familiar with the Falcon version, and the same interface works with
both RAM and VRAM versions of the ISA card.

But only with 2MB. I have a spare 4MB isa card and it does not work with
NOVA falcon. ;-(

Hi,

We are more than proud to announce the release of Ultimate Loading System (or ULS) version 3!

What is this you ask? Simply put, it's a set of routines that let any piece of code run in any part of the system's memory. Not impressive? What about if that piece of code wants to load or save something? What if that code trashes system memory and/or hard disk driver (typically loaded at low memory)?

While this is a generic description, it is meant mostly for making games/demos work from hard drive! This is not an automated process by any means, but it helps a lot in making that possible.

v3 adds Falcon/TT compatibility, picture dumping to disk (.pi1 format), state save/load (if you used it in MAME then you'll be familiar with this!) and more!

Plus! It's open sourced, which means all people can benefit from it!

Head over to http://dbug-automation.co.uk/, we already released the first title using that system, Formula One Grand Prix by Geoff Crammond, fully HD/Falcon/TT/etc patched!

Hi,

You you say "fully HD/Falcon/TT/etc patched", does it still run on a STE with a Hard drive, or is it now reserved to Falcon and TT?

Guillaume.

I mean it should run on any atari with a hard disk driver.

If it doesn't, we'd appreciate feedback on our forum!

For auction, a deluxe option 2 Discovery Cartridge by Happy Computers, this is the 2 switch deluxe model with Mac Roms (for Macintosh disk copying and loading) and extra disk drive port on the back for hooking up a second drive (discovery cart can also copy with a single drive as well) and a battery on the motherboard (for a battery backed clock I presume but I am not sure, I do not have the original manual)

This cartridge is tested and working and in excellent condition!

It is possible top use the joystick as a mouse and I used a small software utility which achieved it but that was a long time ago! I think it was called mouse stick and I probably got it from one of the ST magazines cover disks?

To use the keyboard to move the mouse pointer hold down the alternate key and use the arrow keys and the insert key acts as the left mouse button.

     Tested on TT and STE: cool!
     Great work.

     On the TT I had to remove the CD driver and GDOS to get it running.
Else it hangs after the first screen.

     Guillaume.

Bonsoir

Download on my homepage or directly in the folder
http://rajah.atari.org/files -> litchi11e_uk.zip (110KB)

Changes in this GEM FTP client for STinG:

- fixed crash under MiNT with Memory Protection after file upload or download
  (av_path_update should use global malloc).

"Merci" to Jean Fran�ois LEMAIRE.

Regards

Hi all,

To Jean-Luc and everybody who contributed to the discussion of MiNT not
accepting a FAT32 partition of 4095 MB created by HDDRUTIL:
I finally checked HDDRUTIL's FAT size calculation and did not find
anything wrong, even though MiNT reports "FAT too small".

Let me summarize the calculation, so that you can comment on it:

When creating a FAT32 partition of 4095 MB HDDRUTIL allocates 8386528 sectors of 512 bytes for the FATs and the actual data area. 8174 sectors are allocated for each FAT, which means that 8386528-2*8174=8370180 sectors remain for the actual data. There are 8 sectors per cluster, which means that there are 8386528/8=1046272 data clusters. For each of these 1046272 clusters a 32 bit FAT entry is required, which means that 1046272*4=4185088 bytes are needed per FAT. This is exactly what 8174 sectors per FAT amount to: 8174*512=4185088.

This calculation shows that the number of FAT sectors allocated by HDDRUTIL is exactly the number of sectors needed.
If my calculation is right MiNT is wrong and should be fixed. If my calculation is wrong please point out the error so that I can fix my code.

Best regards   Uwe

I may produce some CT63.
If you want one (SURE), please contact be asap.

Regards

User-Agent: tinx (NetBSD 1.5.4) 1.2.12
Xref: g2news1.google.com comp.sys.atari.st:727

Having had a lot of trouble getting hard drives bigger than 4 gig to work on a TT030, I thought I would try a Compact Flash card, which does not draw much current, and to my surprise, I still had bus problems.

This problem has been getting worse, and having worked as a failure analysis engineer, I thought I knew what the problem was, and I was right, one more time. I went into great detail the first time through, but the process is easy and quick.

Five lengths of number 26 stranded wire, or metric equivalent, in two colors, about 18 inches, or metric equivalent. Strip one end of each, for a half inch (12 mm) twist together, and tin. One color gets laid across the bottom end of pins 1 to 3 of the bottom of the power connector, and soldered to them. The other color gets laid across the bottom ends of pins 5 to 8. Avoid pin 4, which is -5 v.

Pins 1-3 are +5, pins 5-8 are ground. The empty pin is at the other end.

The free ends of one color, mine was green, and leaving one spare, were connected to the plus ends of bypass caps geographically closest to the SCSI chip, the TT memory socket, the back ST memory socket, and the front ST memory socket.

The free ends of the other color, mine was black, were connected to the ground ends of those bypass caps.

When I did this, for the first time, I measured resistance between caps and socket pins, and found that the closest had the least resistance.

The cap ends, after measuring, using a DVM with a semiconductor setting, to see which end was closer to power or ground, were marked with two different colors of paint pen, although anything that does not interfere with soldering can be used. After that, the solution went fast.

This is all done on the bottom side of the board. Having done this, everything seems to work fine, and I have a DVD writer and one ZIP drive on the external bus, and they both work. There is no sign of anything wrong now, and if the printer port fouls up, I have a set of spare wires for connecting to a bypass cap in that area.

If you look at a TT030 motherboard, you will see wide power traces disappearing down very small plated through holes. If they were not heavily plated, a little bit of corrosion, and a lot of power is lost, and things that drive the bus do not get enough to drive it to full voltage. If I had designed that board, the holes would have been much bigger, and the plating thicker.

I have not loaded this machine to its historical full, which was a DVD writer, two ZIP drives, one tape backup, and a scanner, but will get to that, and if on the slight chance that does not work, I will find how to fix that. And I will report on how to do that.

I use a windoze machine at work, and do get work done, but for personal purposes, a TTM 195 monitor on a TT030 is the perfect tool.

This done in pico from MiNT 1.15.12.

Rodolphe,

I love my CT60 and it would be nice to buy another CT63 and
falcon, but
Falcons are going for $400+ on eBay and are way too
expensive. I'm
really not even sure who is buying them! Add to that $200+
for another
CT63, tower case, etc, and there is simply no way I can sneak
this past
my sanity checker (wife). Anyway, I have 2 TT's a Mega STe
(and a spare
fried mega ste board that I can ravage for parts) and ST's
are pretty
easy to find.

What are the chances that we could get a
CT60 for TT? I know this was
discussed repeatedly and you said no before,
but maybe worth bringing up
again. You know I think people with TT's
would be willing to send you
perhaps 250+EUR for a TT accelerator since
we would be just that happy ;)
A Mega STe 68030 board with fast

ram
Mega STe/TT VME video card
ST RAM expansion (16MB)
ST 68030
board...
Newer faster DSP for falcon/ct60 to play with
DSP card for TT
IDE for any of
the above accelerators.

And finally - very interesting to me. A
powerpc expansion for the
falcon. Similar to the blizzard cards for the
amiga. It'd be nice to
have a way to get us all used to PPC to move on
the platform in the
future. The coldfire is very expensive and as tested
barely has more
power than a CT60. Maybe it would be better to
develop for old apple
g3/g4's but just feels fake ;)

I can't help but to
think that after the CT60, such a board would be
easy for you, and I
also can't help but to think every single person who
bought a CT60 from
you has at least one lonely ST lying around that
would love to scream in
ST high with XaAES and MiNT on it and plenty of
spare RAM.

It's just
an idea and of course you should work on what you want to ;)

I know
someone made some board called the Magnum for Mega STe which
allowed 16MB
of ram, but I wouldn't be able to buy this right now for
any amount of
money. A sad situation, especially when you query ebay
for amiga
accelerators and ram boards. Even original A500 can easily
have 8MB.

I am
curious above what you think of all of this and what you want to do
in
the future.

Thanks,
Mark

When you write "first screen", do you mean our intro?

Also, could you state the CD driver and GDOS version? As we are
working on fixing some bugs, we can investigate your problems.

Yes! Exactly.

> Also, could you state the CD driver and GDOS version? As we are
> working on fixing some bugs, we can investigate your problems.

In fact the GDOS is not a problem, only the CD Driver makes the program stop (Juste after your intro, I type "space" and the screen remains white, no answer to the keyboard (even Ctrl+Alt+Del), no sound)

The driver is:
Extendos Pro 2.4
with CD.BOS 3.2B and UNIDRIVE.DOS 2.4A.

The TT has 4Mb ST Ram and 16MB TT Ram and french TOS 3.05.

Other question: no way to play with the keyboard? Only the joystick is supported in this game? It runs really well on a TT, I remember I played with the PC/DOS version and I have the same feeling with this one!

Guillaume.

Well, I'm afraid I don't have those software around here.

Are you a member of the MiNT mailing list? Frank Naumann posted a reply today:

"What about the two empty (unused) entries at the start of each FAT table?"

I don't have a clue what you're guys are talking about, but as he's the one who's written the FAT-code in MiNT he does atleast know how MiNT expects things. I suggest you contact him so you can sort out the correct way to calculate FAT size.

Do these utilities work on a Falcon?  I've tried both to get .msa
images back to floppies so that I can use them, but it never seems to
work.  When I look at the floppy directory, all I see is msa.app.
What am I doing wrong?  Keep in mind that I have never before worked
with .st or .msa files.

Thanks

JayMSA is solid PRG, but has some flaws.
I can recommend to try my PRG of similar purpose, but solved
differently. It works by creating RAMDISK 'O' with content of loaded
ST or MSA image file, or readen from floppy. Then you may write it to
(another) floppy, or modifying content of RAMDISk under regular
Desktop, and then save somehow (to floppy or image file).

> one who's written the FAT-code in MiNT he does atleast know how MiNT
> expects things. I suggest you contact him so you can sort out the correct
> way to calculate FAT size.

I do not have his current email address. Can you please give him my
email address that he can contact me? Thanks!

Thank you, I will keep his address in mind. For now there is no need anymore to contact him. After sitting in front of my TT with a pocket calculator I figured out what was wrong in my FAT size calculation.
The bug is fixed now and MiNT is happy again.
The new release HDDRIVER 8.23 is already available. Details are available on http://www.seimet.de/atari/en/hddrivernews.html

You can also use a program called DCMSTICK which lets you use a joystick in place of a mouse. I used it when my cat chewed the mouse cable all up until I got a replacement. I recommend using a Sega gamepad as it's better for diagonal movement and it's easier to hold in one hand when also using the keyboard.

It is possible to use the joystick as a mouse and I used a small software
utility which achieved it but that was a long time ago! I think it was
called mouse stick and I probably got it from one of the ST magazines
cover disks?
>
> To use the keyboard to move the mouse pointer hold down the alternate key
> and use the arrow keys and the insert key acts as the left mouse button.

Bravo Sierra wrote:

I think I know what you mean by two speeds. Alt + Arrow Key moves faster or, lets say each key click moves farther on the screen, or coarser. If you add the shift key, like Alt + shift + Arrow Key, you have a key click that moves closer together on the screen, or finer.

Also, an ST Mouse has another use for the Right Mouse Key. 1st) Open two Disk directories on your ST Desktop. Now you can interact with the Directory that is not active without activating it. Usually if you try to drag a file off the directory, the directory becomes active! Unless you first hold down the Right Mouse button + Left Mouse button while continuing holding down Right Mouse Button. This allows you to interact with a disk directory without activating the directory making it the default directory.

==Thanx==

HI,

Anyone have the manual for this program?

```
Thanks

I should be able to find the complete package, if you haven't already
found it.

In order for me to get to it, I have to go on a quest which involves
vultures,
and unseen monsters. Reminds me of Temple of Apshai or Alternate Reality.

Hi,

There's a new 0.9.7beta release of ARAnyM <http://aranym.org/>,
so the *miniPack* <http://eureka.atari.org/miniPack.zip> was
updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on MacIntel with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy =3D)

You must live very near me. I live a few miles from that very mall.
But I never went there as a kid because my parents never went there.
So I have never sen the display you are taking about.

Heck, I'm in the phone book!<grin>

Not exactly a public person but not very hard to find because of my
career, memberships, and posts. I mean I've posted I was a member of
BAAUG, SLCC, visited Mike at FTE in Scott's Valley, Met both Wooley
and Wilkinson, worked for Alza, et cetera. Can't get much more SF Bay
area then that. Patents even list my city of residence too.

Rick

No, that's a different company. Best was (is?) a department/catalog
store sort of like Sears, etc, just not quite as big. I think central
states only? I'm not sure how far east/west they spread. They were
well known for some of their very unusual buildings. One in Houston,
TX looked like it was falling down. Big pile of bricks tumbling down
from the top of the building and such.

There's another one that from the outside the building looked like it
was sinking into the ground on one corner and was tipped about 5-10
degrees. Crazy architecture... The buildings were featured on an
episode of Ripley's or That's Incredible or something like that back
in the 80's...

Best Electronics I think has always been just the one company in CA...

Rik

I can still remember the first computer program I ever learned:

```
10 PRINT "WELCOME TO RADIO SHACK";
20 GOTO 10
```

:)

The RS I used to hang out at all the time always had that scrolling diagonally across the screen of the demo model TRS-80 Model 1. I actually had to write it down so I wouldn't forget it... I probably still have the piece of paper somewhere.

Rik

On Sep 24, 11:52 pm, joecass...@mac.com wrote:

> If anyone has photographs of computer retail setups from the 80s and early 90s, I urge you to post them to the web somewhere. It would be particularly nice to see the old Sears setups and the showrooms of stores local to your home town, for nostalgia.

I can go back a few years more and recall the Santa Rosa Computer Center (I think that's what it was called), BYTE Shop and ComputerLand (when they had Ataris and PETs) A lot of various computers S100s, Ataris, PETs, Compucolor (ooohhh such nice color back then, even the keys were colorful!), and Apple [[s. Tons of cool computer books and magazines and uber cool devices like wide carriage dot matrix printers and flatbed pen plotters. Also the full wall wallpaper of the moon (lunar surface and forest scene wallpaper was one of those 80s fads) at one had a dot-matrix mural of the moon. Those got my introduction to creative computing magazine and BASIC computer Games.

I used to write BASIC demos on the Sears/Kmart 64s, while my folks were shopping something like:

```
10 for x = 0 to 25
20 ? tab(x);:? "Larry Was Here"
30 next
40 for x = 25 to 0 step -1
50 ? tab(x);:"Larry Was Here"
70 next
```

Later on I had memorized how to code a sine wave and would write a sine messages instead of a zig zag, also changing text color, etc.

One xmas we went to my brother's place in Oregon and I got to get to play an Atari 800 w/ Asteroids and Missile Command at a store (most didn't have Ataris as accessible as 64s), that was something.   I also remember in the same mall there was an arcade with tail gunner and some other great Cinematronic games (new then, classic now)

I worked at a computer store in Germany on Ramstein AB. The Audio/Photo Center.

We had Vextrex, Kaypro, Zenith Z-100, Z-150, Apple IIe, IIC, C64, Epson and a few others, but of
course the commodore 64 was my choice.

I used to put up a color bar program. With the Apple IIC and the crappy little green monitor, we always sold out of Commodore equipment before anything else.

```
10 PRINT"{Clr Screen}{Rev On}";:FOR x = 0 to 15:POKE 646,x:FOR y = 0 to 39:print
"{Space}";:next y,x
```

16 rows of color bars

Nice one liner that sold many a 64 back in the day. Not to mention the disk of the day I would leave in the 1541 which of course had a disk copier on it....

Nice subject on this thread.   It brings back a lot of good memories.

Keep the stories coming.

Are the vertical lines on colour or mono monitor?
If colour, it might be a power supply problem.

>my 1040-STfm display 1985, 87). Not sure if I can use the 1.04
>ROMs, I seem to remember the motherboard layout being very

There were multiple PCB layouts, some with different numbering for the ROM sockets (and all other parts).

However, the ROMs work in all models, and a 1.04 ROM set should work in all machines where the same number of 1.00 ROMs are used. If you have a two-chip 1.04 set, you will need to adjust 2-3 resistors on the PCB to use them instead of a 6-chip set.

Here in the UK your best bet for playing on machines was the independent computer shops. One of my particular memories of shopping

in a major chain - Boots the chemists, whose larger stores used to
have an electronics section - is of setting off the "trembler" alarm
attached to a C64 and its Music Expansion System. Very high-pitched.

I nearly missed the bus home once because I was too busy playing Mr Do
on the Atari 800XL in that store, too...

I have vague memories of watching someone play Hitchhiker's Guide to
the Galaxy on some kind of Apple back when... In Finland. But I don't
think Apples sold that well here, with the usual "Europe pays double"
pricing they must've been really expensive...

Well, they were already double or triple the cost of a comparible
Commodore 8-bit setup, so if they were sold for double in Europe, then
I can't imagine how much they would have cost.

It's on the color monitor. The lines are very subtle though, not something immediately noticable unless you look closely. I've seen the same effect on old VGA cards and a genlock video card on my Apple II.

Speaking of monochrome screens, I passed up a 12" Atari monochrome screen with this system (may be too late to get it now, the owner said he was throwing it out if I didn't take it). Is it possible to hook up the ST to a VGA screen to display its 640x400 mode? I even have some that sync down to 15 kHz, but then I suppose finding a DIN 13-pin to VGA adapter is not going to be easy.

>instead of a 6-chip set.

The last time I opened my Atari 1040-STfm I jotted down the motherboard part number: "C070789-001 Revision D/Action D2". I vaguely remember the DRAM chips were underneath the power-supply (rather than the front end) and it's likely it may only have 2 sockets for ROMs rather than 6. How would you go about getting it to use 6 chips if there's only 2 sockets? A plug-in daughterboard? Or just a different set of ROMs?

My main concern with the 1040-STfm is it's RF modulator has sound but no picture--I just get a black screen. I'd like to repair it so I can get composite output working. Any tips on how to go about repairing that?

Mitchell Spector

Heh. Excuse me for not stalking you. ;)

FWIW, I'll be down in the Bay Area for the Google Summer of Code
'Mentor Summit' in late October.  Maybe we can grab coffee or something.

Or... maybe I should just plan a separate trip.  (I'm a bit of an over-planner,
and end up trying to do way too many things at the same time, rather than just
make a couple of separate, focused trips. :) )

> They are gone too.   :-(

The Montgomery Ward store in Hulen Mall in Fort Worth was the only place I ever saw a Bally Astrocade home video game system set up and turned on.

You may remember that Sears used to be the 800-pound gorilla in the shopping world, and if you wanted to sell anything at Sears, it had to have their name on it. That's why Atari manufactured the "Sears Tele-Games System" or whatever they called it, which was just an Atari VCS with a different label slapped on it. Nobody was really fooled, and I think I may have seen one such system set up for play in one of their stores at what was then called Seminary South mall in Fort Worth. But our family never had any pleasant memories of dealing with Sears, and for us Sears was just something we walked through in order to get to the rest of the mall. (Come to think of it, I can say the same thing about the Montgomery Ward store at Hulen Mall.)

When I grew older I went to work in a Sears service center, repairing various electronic items. Much of the stuff that came in for repair arrived from various Sears stores, and they were either customer items or devices that still belonged to the stores but hadn't been sold yet (or were showroom demos). VCRs were still pricey enough to warrant repair back then. We never fixed any video games, but I do recall seeing some very strange, early attempts at custom word-processors that we had to fix. I have no information on any of these, unfortunately. But I feel sorry for the poor dopes who bought them. Not compatible with anything else on planet Earth, and totally useless now. Some even used their own custom forms of floppy diskettes. These were self-contained computers, with their own internal video monitors.

I think it was a BEST store by Ridgmar Mall on Fort Worth's west side where I bought my first electronic typewriter in the mid-1980s. I'd saved up some money (I was still in high school and not rolling in cash) and bought an Olivetti Praxis 20. It used a daisy wheel with film ribbons to allow you to back up and correct mistakes, but it was no computer by today's standards;

no video display or anything. But I didn't do my homework before I plunked down the cash; I did not realize until I got it home that those ribbons were not re-usable. One ribbon was good for about 20 pages, and that was it. If that wasn't bad enough, I also discovered that replacement ribbons were available ONLY from that BEST store! Nobody else in town carried them. And BEST only had a few extras on hand at any given time. I eventually was able to buy a cloth-ribbon cartridge, which was re-usable, but the experience turned me off on BEST and Olivetti products forever. When the typewriter eventually broke I took it completely apart and salvaged it for parts. Taught me a bitter lesson. The store closed long ago and I don't miss it one bit.

Today I live in Arlington, TX, but my parents still live near Hulen Mall. But I haven't been inside the mall for ages. My sister used to work at the Hulen 6 movie theater, which has since been closed and boarded up. The mall has been expanded at least once since I was a youngster, too. I seriously doubt that Video Concepts is still there, given the horrendous turnover of stores in malls. Hulen Mall opened in 1977. I don't think there's a single original tenant left in there. Stores come and go. There used to be a video game store on the second floor where I sometimes bought Atari 2600 cartridges, but at the time I couldn't afford the $50 they wanted for the "Le Stick" Atari 2600 joystick that used mercury switches and allowed you to play games in midair. I have no idea what video game stores are in Hulen Mall now.

When the Atari 5200 system came out, the only place I could find that carried it was Toys R Us at I-30 and Cherry Lane, on the west side near Ridgmar Mall. Is that Toys R Us still there?

There used to be a good computer store on Camp Bowie Blvd. where I actually plunked down the money to buy a software package for my Tandy 1000 computer (an IBM PC clone). Can't remember the name of the store but I bought a copy of a word processor called "Professional Write 2.0." Can't remember how much it was, but it had to have been good for me to go out and buy it. Still have it on the shelf, too, with the 5.25" and 3.5" floppies inside. :) Haven't used it in many moons, however. Too sentimental to get rid of it. I started out on WordPerfect but my pirated copy started acting strange. I got my money's worth out of "Professional Write," however.

I remember Professional Write. A copy came packaged with an XT Clone that I bought. One thing I liked about it was that it could take full advantage of the proportional fonts in my Epson printer. Or on the other end of the spectrum, it could print to file and create a nicely formatted pure ASCII file which could be easily converted to a nice looking CBM text file. I'll hazard a guess that such files would be easy to convert to an Atari format also.

Sure, Starbucks is good for me or whatever is local. I'm guessing summit
will be in Mt. View? That'll give me a month to get a functioning 1200XL
for you.

In that case, it might be tolarances - however, bad capacitors in the power
supply or on the mainboard, or bad cabling might also be the cause.

It works, but you will probably have to build that adapter yourself - wire
mono out to all three (RGB) video inputs on the VGA monitor, connect HSYNC
and VSYNC, and ground the mono detect pin on the atari side.

Most VGA monitors will sync to the ST's frequencies, although on some you
can't get the image to fill the screen completely.

>motherboard part number: "C070789-001 Revision D/Action D2".

>it to use 6 chips if there's only 2 sockets? A plug-in daughterboard?
>Or just a different set of ROMs?

If there are provisions for 6 ROMS, but only 2 sockets, you could retrofit
the missing sockets. On later machines, there were really only 2 sockets
supported - in that case, you need a set of 2 (bigger) ROMs, or EPROMs.
27C010 EPROMs have 32 pins instead of the ROM's 28 pins, so you need a tiny
bit of wiring (or an adapter socket) to match the pinouts.

>sound but no picture--I just get a black screen. I'd like to repair it
>so I can get composite output working. Any tips on how to go
>about repairing that?

I never used modulators - FBAS input to a TV gives much better quality.

An oscilloscope and schematics will be helpful, but I am not sure if
schematics of the modulator box itself were available - I can not currently
find my collection of printed ST schematics. If RGB output works, there is
not much outside the modulator box that could cause the problem.

They were sold in Europe (at least in the Netherlands), but one had to
look real hard to find a shop that sold Apple computers. Apple wasn't
nearly as popular as Commodore, MSX, Atari and even Sinclair in this area.

Hi,

I recently sent a news to <news://comp.sys.atari.announce>

Sujet: ST> ATARI Search Engine
Date: Fri, 26 Sep 2008 23:32:55 +0200
De: Francois LE COAT <lecoat@atari.org>
Forums de discussion: comp.sys.atari.announce

but the publication seems to be delayed. I already sent about
this topic 19/05/2007 1:50 and it was delivered correctly.

Maybe the newsgroup is not so regularly moderated as it used
to be in the past. In case may we have news from moderators ?

Thanks for any useful information about the way it works.

ATARIstically yours =3D)

Greetings everyone!

Here is the lucky winner for August 2008 at The DarkForce! BBS:

August 2008
1. kb7sqi - wins the partially populated Mega STe motherboard
            with TOS 2.06 ROMs (courtesy of Techie_Allison)

Also, here is September's prize:

September 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
   subscription.

Congratulations to our winner, and good luck to this months callers!

 :)

Earlier 520 STf had a 360KB internal floppy, this switch was used to boot
on an external 720KB floppy.
Well... it's strange, coz I thought that all the 1040 STf had an internal
720KB floppy...

```

She had, therefore, returned to Paris for a few days, and taken up her abode in her dwelling, whose present dreariness recalled, with sorrowful eloquence, the grandeur of the past.

These drawing-rooms, once the rendezvous of so many kings and princes, were now desolate, and bore on their soiled floors the footprints of the hostile soldiers who had recently been quartered there. At the czar's solicitation, they had now been removed; but the queen's household servants had also left it. Faithless and ungrateful, they had turned their backs on the setting sun, and fled from the storm that had burst over the head of their mistress.

The Emperor Alexander hastened to the queen's dwelling as soon as her arrival in Paris was announced, the queen advancing to meet him as far as the outermost antechamber.

"Sire," said she, with a soft smile, "I have no means of receiving you with due ceremony; my antechambers are deserted."

The appearance of this solitary woman, this queen without a crown, without fortune, and without protection and support, who nevertheless

    COuld it be to boot on an external 5"1/4 drive with an emulator for
example? But I think that PC emulators can make a soft swap of A: and B:.

Bonsoir

As usual, download on my homepage or directly in the folder
```

http://rajah.atari.org/files/ -> kkcmd12_uk.zip (70 KB)

News in this Total Commander mock-up:

- fix: when copying/moving, correct dates of files and folders
- fix: when already existing formular - exit click and Enter works
- fix: better disk informations (Ctrl+I)

In icons list, on A or B:
+ floppy disk format
+ floppy disk quick format (FAT erase, keeping bad sectors positions)
+ convert floppy disk to .MSA file (with RLE compression)

In files list, on .MSA or .ST file:
+ can open a floppy disk image as if it was a folder (delay of work if
  compressed .MSA file), can walk throught folders and list files.
+ can copy those folders and files to a real folder/disk (ie files extraction)

Ctrl+M is key shortcut on floppy disk or .MSA or .ST files.

Thanks Frost242 and Zerosquare

Voil�

Expected for the next upgrade:
- files/folders selection �-la-Total-Commander, to manage Insert selection
  (ie selected files will appear in red, different from the black cursor).
- split/unsplit of files �-la-Total-Commander.
- PKZIP ? (at least, trying to list files inside as if the .ZIP was a folder).

> also.

I bought Professional Write because it was very easy to learn and use. You probably heard scary stories about how WordStar was to learn; never even touched that. Professional Write was primitive by today's standards (didn't even use a mouse, I don't think, and had no real graphics capability), but it worked quite well. I really loved the cut & paste feature, and programmed some of my own macros to speed up a few cumbersome processes. There was one tiny bug in the program that irked me a little... if you were writing fiction with characters who spoke a lot, using the Tab key so often would cause the program to think you wanted to change the left margin (I may be wrong about the precise details on this... it's been so long ago).

I forget the name of the company that produced Professional Write. They've probably been bought up, sold, merged, split up, bought up again, stock split, folded, spindled, and mutilated several times by now.

I never owned an Atari home computer simply because they were so expensive at the time. And I wasn't that good at typing out demo BASIC programs on them on store displays. Each type of home computer had its own verion of

BASIC, and of course not every single command was necessarily transferable.
I do remember seeing some TV commercials for the 400/800 computers, such as
a father teaching his son how to speak French with an Atari home computer.

Most (?all?) of the early 1040 STf machines had single-sided
drives built in. The switch allows you to boot of DS diskettes.

```

Something weird has started happening with my Milan keyboard.

Last week I was having problems getting some keys to respond. I assumed it was the batteries in the wireless keyboard but the leds on the receiver puck wer falshing every time I tapped a key. I changed the batteries anyway.

It has happened intermittently since but today it was working fine as I was using Texel. Then it suddenly stopped responding to lots of keys, particularly up, down, left right but Shift-up, down, left and right still worked.

It is fine in other apps (I'm using Everest now) but if I restart Texel it behaves oddly again.

Any ideas ?

Have you tried with a different keyboard? Have you tried Texel in TOS (I guess you're still using MiNT)?

I was hoping for a pre-build VGA adapter. I did a search and
found someone who hooked up their NEC MultiSync 3D (which
I happen to have) and got 320x200, 640x200 and 640x400/mono
to all display through the *same* cable.

>Most VGA monitors will sync to the ST's frequencies, although on some you

Probably should've just grabbed the Atari monochrome screen,
but I'm just trying to limit the number of CRT's I keep on hand.

>>motherboard part number: "C070789-001 Revision D/Action D2".

    I opened up my 1040-STfm, there are only 2 sockets in place. I did
see solder pad locations for adding 4 more sockets, along with a trace
you can cut/open to select what density ROMs are being used.

    For the moment I'm stuck with the 1.02 ROMs in this system. Not
sure what features 1.04 adds but much like the monochrome screen
to display 640x400, I don't think it's absolutely necessary for what I'm
doing with it at the moment....just exploring and tinkering. Apart from
seeing magazine ads back in the mid 80's, I never had a chance to
check out the Atari ST back in the day (or the Amiga for that matter)
as I went with Apple IIGS instead. Catching up now. :)

    I'd like to fix the RF modulator, because, apparently, it's tied in
to the machine's ability to display composite video. I much rather
use the RGB display, but it'd be nice to have composite if I wanted
to bring the ST to other locations and hook it up to a TV set or LCD
screen (certainly won't look all that great, but at least it's some
kind of video output).

I have a few old broken 1040's . I might be able to remove for you a working
RF modulator from one and send it to you.

I got to dig them out of storage first.

I got my brother's Timex Sinclair 1000 when he got a C=64, and played on both a little. At Sears(?) one day, I tried to program a little program in BASIC on an Atari 800XL or 600XL, and because I didn't know about the string restriction (you need to DIMension them first), the program didn't run, so I thought "fooey!"

Then for Christmas (or was it birthday?) I got a 1200XL. Most awesomest machine ever. Except that the Rev. B BASIC cart. I had ate my most-excellent Pac-Man clone. :^(

An 800XL I picked up years later is currently hooked up in the drawer of our TV stand, with an SIO2SD connected to it, and a bunch of random game and demo disk images loaded onto the SD card. Sweet and self-contained. ;)

(And above that are the Jaguar, Dreamcast, Atari 7800 and Sony PS2)

Does this still happen if you remove the mouse?

I have seen erratic keyboard/mouse behaviour when the +5V supply for the
PS/2 ports (keyboard and mouse) is broken: if a device draws too much
current, a PCB trace may blow. In that case, the +5V supply to both ports is
broken, and keyboard/mouse get their power only from the pullup resistors on
the data lines. If this works depends on the exact model of keyboard/mouse,
and usually it works better when only one device is plugged in.

Anyway, you should try:
- a different keyboard/mouse, preferrably a non-wireless model
- measuring the +5V on either port when both keyboard and mouse are plugged in

If the +5V supply is faulty, this can be fixed by soldering a small wire on
the PCB.

cu

This previously priceless collectors item,modified at huge cost is now a
landfill item, sad or what?

If you'd only offered to ship it. But I wouldn't travel from south
Germany to the UK for a defunct Stacy, sorry.

Mit freundlichen Gr=C3=BC=C3=9Fen,
Dennis Schulmeister

I can't even begin to express how I feel about someone who would
deliberately do something like this, knowing how many people would give
their left testicle to own one of these machines!

The GP2X Wiz and Pandora units will open up the face of homebrew
games, one is a pure Gaming console, with hundreds of emulators
written for, the other is a console/UMPC

Check the data here:
http://gp2xwiznpandora.blog.co.uk/

For any interested it's on eBay here:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=170268238854

I can optionally ship the dongle alone for much cheaper... but the manual is the only help with this software.

Thanks for reading!

Fun indeed. My favorite gag was to find an MS-DOS machine and run the
following commands from Debug at the DOS prompt...

```
C:\>debug
-a
137B:0100 mov ax,13
137B:0103 int 10
137B:0105 mov ax,a000
137B:0108 mov es,ax
137B:010A mov dx,3
137B:010D mov cl,dl
137B:010F mov di,0
137B:0112 add dx,9248
137B:0116 ror dx,cl
```

```
137B:0118 mov ax,dx
137B:011A stosw
137B:011B cmp di,fa00
137B:011F jne 112
13CE:0121 jmp 10f
13CE:0123
-g
```

Nothing harmful, but made it look like something was _seriously_ wrong with the monitor.

They take a laptop sized IDE, I have replaced many, but over the years they have grown from 250meg, to many gig, I suppose it will depend on the tos limit? or driver software limit., HD Driver was the top dog when I was into the falc

When small laptop drives were very expensive, I shoehorned a 3gig 3.5 into a Falcon with adaptor lead and a bit of plastic removal,

anyone else any ideas?

 In year 2008 is much wiser to buy and use some Compact Flash card on
Falcon instead 2.5 inch hard disk.

The reasons: it is cheaper, it consumes less power, it is faster, it
is total quiet...
 Easy to attach on PC - good for data transfer.
```

Contras: needs adapter.

Just avoid cheap no-name cards. Buy some Sandisk of 2-4GB. It is very
reliable and compatible.
Together with adapter it should cost 25-35 Euros.

I did check my e-mail. 8-)
If you are refering to Mike of FTE, that was back years before I even
had internet access. I am glad to hear that you are so interested in
my past business. And you seem to know it so well too.

No Rick, your words were keep it for a year or so.
I did buy another one after you sent yours so update your records.
You didn't seem to want it and I just put it in a box.
You will need to give me your addess again if you want it returned.
I know you have mine.

I don't know of what Mike you are speaking of in July 2005.
Do post that E-mail as I don't seem to have that one.
You seem eager to drag other people into to this.
I've nothing to hide.

I don't fancy threats, however.

Mike sent me a 4.21 upgrade chip that didn;t work. He finally ended up sending me a complete 4.21 cart. I was very greatful for that.

But ya know, I really didn't see the difference in day to day use.
Unless it was something that I normally didn"t use.

I just ordered a Willem Programmer, that does Eproms, EEproms and a bunch of other chips. It works on a PC.   I ordered it especially for Atari 8 and 16 projects. But I will need to order a cheap adapter to do 16 bit Eproms.

I should have it in about a week. Maybe I can burn a 4.21 chip?
I have a copy of the ROM Image.

I can see how that would work. However, on the SDX chip, there were actually
some rust and corosion that was touching other pins.

I just took a pencil eraser and gently clean that off.

I think it will be ok, I will try it out today.

If the wife doesn't throw a fit.
Dam she hates Computers!

WOW, almost sounds like my situation at times.

BTW is she on Anti-Depression medication?

My wife like to play hide and seek with my computer stuff.

She will hide it, and I'll have to seek it out. Especially with
anything new that I get it. As I have a room full of stuff.

Hopefully this Fall, this will change. I have a building beside
of my dads business, that i plan to move all my computer
stuff into, so that I can do as I please without the
disruptions.
My kid will be in school, so I will have sometime for projects
and stuff.

My wife is pretty cool about stuff, It's just she wants no more
computers and things of that sort in the house.
Big waste of time in her opinion.

I have lost a Falcon 14meg memory board, PowerSupply and
a few other goodies that I know she must have threw out as
I can find anywhere. I have backups but God those can be
hard to find and expensive.

> > I found it. Some water damage/mold but none of the pages are stuck

>>

Great about the manual! That will be a big help.

Ahaa haa hee hee, thats funny.

Want to play with her mind? Start hiding her panties and personal
things. She will go nutts!!!

Anyway, I'll take care of the SDX cart for ya. And if all goes well I'll
try it out
today. I need to hook my 8-bit up to a TV as my monitor went out on me.
I think I can fix it, but I found a similar one forsale cheap and bought
it.
It will be a week or so before it arrives.

If ya need anything or just want to chat, just hollar.

Barry

I guess your wife would rather you spent your free time in front of the TV scratching your arse, and eating chips and sucking soda pop. ;-)

Don't mess with her stuff, because then she'll do more than hide yours, she'll destroy it.

This is just one more reason that I don't have a partner living with me.   ;-)

Very funny.
Anyone can edit a e-mail and post it.
It's a shame you have nothing better to do
than post lies about someone.
About what I expected,

I'll tell you what, instead of me mailing the cartridge,
How about I come in person and deliver it.

For some strange reason it is only my Atari stuff. I mean she is sort'a tolerant of my other stuff. I have several motorcyles, two boats, a dog, fishing poles, , tools, garden, what have you. Something with an Atari logo on it is like waving a red flag in front of a bull! It ain't natural.

Rick

Here is a post on the internet from you:
http://newsgroups.derkeiler.com/Archive/Comp/comp.sys.atari.8bit/2006-02/
msg00034.html

Over a year after you said my 4.19 version was flaky and unusable. Can't
fake Google archive. Sorry, you lose.
> I'll tell you what, instead of me mailing the cartridge,
> How about I come in person and deliver it.

LOL! Look, here is my problem. There are only two options here

1) You are going through dementia for one reason or another. I suspect drugs and alcohol. In that case I should let it slide since my friends in RL and the newsgroup who know me expect me to be a bigger person. Beating up on an obvious mental defective would be out of character for me.

2) Terry Ortman has gotten out of prison and is using

Barry Shortridge
P.O. Box 210
Mouth Card KY 41548

As a new identity.

In any event, Terry Ortman or Terry Ortman work alike, people will consider this a fair warning not to deal with you. Our unofficial policy is not to feed the trolls or reply to the Terry Ortmans of this world.

You have no intention of giving me my cartridge back, I've figured that much out. You're just a small time liar and petty thief, not John Gotti. You have no intention of showing up here as at this stage I doubt if you have a drivers license, car, or money for air fare. You don't evoke any response from me but pity. I wish you much healing from whatever daemons are plaguing you.

Rick

You're right. There is something whacked out there.
Have you tried to discuss that with her? Does she say
something like "I don't know, it just makes me nuts?"

Bill Garber from GS-Electronics

More like "The topic is not even open for discussion"

I figure it is something primal like ~nest building. She needs her beading room, although she has not beaded anything in maybe 10 years and a sewing table, although she has not sewn anything in 7 years. We both get computer desks in her scheme of things but I am limited to my Windows computer.

When I built a small cabin for her "beading and sewing" hobbies in the hope I could use some of the freed up room in the house for hobbies I actually do, I kind of got read the riot act about how clueless I am. Something about how I'm subverting the whole point of being together.

It's probably one of those things you have to be a woman to understand. I mean if someone would have spent weeks and thousand of dollars building me an extra room for my hobbies I would have been tickled pink! But then I am a guy so I am not familiar with the ways of a woman. Near as I can figure out is we are supposed to have male and female hobbies and exercise them in the same general area. Almost seems to make sense in some Martha Stewart/Good Housekeeping type ethos. I know of at least one other Atarian certainly better known and more talented then myself that is relegated to his attic.

But heck, I will occupy the cabin and see if my ST still boots and get at least one of my 8 bits running. I know there is something that will jump up and bite me, like I was supposed to build his and her cabins because of the Martha Stewart togetherness thing.<grin>

Fortunately my wife understands that Atari was my first love, so while she does suggest culling things now and then, she actually prevents me from getting rid of some stuff sometimes. (Why I still have an Atari 2600 TV Paddle Games.)

Right now, though, mostly because of our baby, my Atari computer is living inside a drawer under the TV. And mostly it's the baby's poking at things that prevents me from using it much right now. When he grows up a bit, and can actually enjoy video games (more than the amazingly fun power switch), I think he and I will both enjoy all my old toys. :)

BTW - There was an article in some magazine recently about how men need
their "man cave" in their home... be it the underground bar and pool room,
or the computer dungeon, or the workshop in the garage. I guess my 'man cave'
is my laptop + local coffee shop, for now. :)

I"ve been married forty-five years, and feel I should
share some experienced wisdom here.
However, all I can say is 'I know nothing.' in
a Charles Shulz sorta way (Hogan's heros).
I can say I enjoyed my Ataris more with my
grandson than I did with my son. My grandson
went through about a 6 month investigation of
Atari, and got me to give him a 1200XL, and
an old notebook to APE with. He used it some,
but the Wii and internet real-time games are the
present interest, along with Magic cards (1000s of
them.)
I hope I've given you some sound information.

I need to give my son credit for getting an Atari in
the first place. I got three Coleco Adams and
all of them smoked, and my son told me to get
an Atari, which I did, and the odyessey began.
This was January, 1984.

Just received an Atari 1040 STf over the weekend, with the catch being the previous owner mixed up the six ROM chips and put them in random sockets! I'm trying to figure out which sockets each chip plugs back into to resurrect the machine.

The sockets are labeled: U2, U3, U4, U5, U6 and U7

The (version 1.02?) ROM chips are labeled:

- C026160-001
- C026161-001
- C026162-001
- C026163-001
- C026164-001
- C026165-001

I tried the most logical thing and put the lowest number in the lowest socket (i.e. 60=U2, 61=U3, 62, U4, etc) but it just powers up to a white screen and the floppy drive won't load. He also included the 1.04 ROMs but I haven't tried installing those yet.

Interesting, on a side topic, it looks like someone modded this. There's 3 phone 1/4" audio plugs drilled into the back with wires leading to the motherboard (best guess, it tapped into the AY-3812 sound chip?). Also a toggle switch next to the floppy drive, with the wire leading to the far end of the floppy ribbon cable (something around pin number 47 or 48 I guess). I wonder if it overrides the write-protect mechanism or helped by-pass copy protection. :)

Oh, got an SC-1224 monitor with it, and a "Monitor Master" switch box, but it doesn't seem to work as a stand alone video adapter for composite out to a TV. Passed up a monochrome Atari monitor which is getting thrown out if I don't take it, just on the fence if I should get it or not. I know it's needed to do 640x400 modes but I just don't have the room for more CRT's. The color screen is rather nice, I'd swear it uses the same picture tube as my old Apple IIGS monitor (nice deep blacks and color saturation!).

Mitchell Spector

This can be a switch to swap A: and B: to boot on the external drive for example.

Guillaume.

Way back in 1987, I remember seeing a demo produced by Atari themselves for showing off the ST series in stores. Basically it was a reflective metallic ball rolling over a flat surface covered in Atari logos. I vaguely remember the ball moving side to side as it rolled, or at least spinning.

Anyone know the name of this demo, and if it's available for download? I'd love to see it again all these years later!

Hmm, you sure it wasn't multiple balls? That makes me think of Xanths
"Shiny Bubbles" demo. You could use the keyboard to control it - for
example, increase/decrease the speed, start/stop/pause, etc,...

I'm pretty sure I've got that in the files section on my BBS - if you
want, send me an e-mail and I'll try to get it to you.

    Ahh, sounds very much like it! My memory was a bit fuzzy, it was
21 years ago that I last saw it--on display at a local Compucentre, next
to an Amiga and Apple IIgs. It wasn't one ball going side to side, it was
```

multiple balls! (and it was the "Atari" name on the surface, not logo).

Did a quick search, the demo was released in 1987, same year I saw it on display so chances are good that's it!

>I'm pretty sure I've got that in the files section on my BBS - if you
>want, send me an e-mail and I'll try to get it to you.

Found it and downloaded it already (using a program called Floppy Image & File Transfer 0.97 to get it over to the ST). Yep, *awesome*, definitely the same demo! I'm sure there are much more interesting things to look at, but I just had to see this again for a bit of a nostaligic flashback! :) Thanks!

Just finally getting a chance to explore the Atari ST all these years later, it's an pretty interesting machine and more capable than I originally thought!

Mitchell Spector

>CO26165 ST U.S. TOS 1.0 256K (L0) ROM

So these are 1.00 versions of the firmware? That's definitely interesting to know, but that still doesn't help me as far as which sockets they plug into. Then again, if H2=[U2], H1=[U3], etc, then I had them in the right sockets afterall.

Did some searching and found this link:
http://www.atari-forum.com/viewtopic.php?f=15&t=10542&p=84174&hilit=tos+chips#p84174

According the photo (http://www.galaxyzone.net/images/DSC01537.JPG) I have the ROMs plugged into the right sockets. I also tried the order listed down the page, in the white box marked "code: select all". Just get the same results, a white screen, no audio and no floppy activity. Getting a bit desperate, I plugged in the 1.04 ROM chips, using the order shown on the same link and that didn't work either.

I'm beginning to think this Atari ST is dead, despite what the seller claimed. That would be disappointing, but it wouldn't be a total loss as I did get a working SC1224 monitor, 3 boxes of copied disks, a video switch box, mouse and a perfect condition keyboard.

Is it possible the guide I used is wrong for the ROMs? Do they plug into different sockets than what I tried? I hate to throw away a perfectly good Atari ST over mis-socketed chips.

Mitchell Spector

According to a script which I used to split modified TOS images long ago:

```
 load tos14x.img 0 64k all -> 0 all
 save romh0.u4 32k <- 0 high
 save roml0.u7 32k <- 0 low

 load tos14x.img 64k 64k all -> 0 all
 save romh1.u3 32k <- 0 high
 save roml1.u6 32k <- 0 low

 load tos14x.img 128k 64k all -> 0 all
 save romh2.u2 32k <- 0 high
 save roml2.u5 32k <- 0 low
```

that does indeed look correct.

Did you pick it up yourself, or was the unit shipped? Either case, it might be bad contact on one of the PLCC sockets - that was a frequent problem even when the machines were newer. It might help to

- remove the PLCC chips from their sockets (use a PLCC extractor in order not to damage the socket!)

- carefully clean the sides of the PLCC chip pins and the contacts in the socket using a fiber-glass eraser pen

 - If that does not fix it, *very* carefully pull the contacts in the (empty) PLCC sockets inwards a tiny bit to increase contact pressure. A very small hook (like a 0204 resistor with one lead bent into a very small, sharp hook) helps.

Guess those displays must have been a happier memory for people in the States,
were you allowed to use the computers on display?

Here in the UK a particular consumer electronics chain put a bunch of systems
ready to use within easy access of people, and then the store assistants
were told to go ballistic if anyone even touched the things.
How sad is that?

> Guess those displays must have been a happier memory for people in the States,
> were you allowed to use the computers on display?

I live in the USA and as I recall, we were always allowed to play with the machines. I specifically remember playing with them in Sears, Radio Shack, BEST, Service Merchandise, Electronics Boutique, and Target. Although, most of the Targets did not have the machines operational. I also remember seeing the machines in Toys R Us, but I can't remember if they could be touched or not.

In fact, I would venture to say that as a kid, my favorite store to go to was Service Merchandise. The reason is that they actually had computer tables setup with chairs and everything where you could comfortably sit down and use the computers. They stores weren't busy usually, and there were very few kids. So unlike today with the game machines, there were no fights over who was going to play on them next. I sat down in front of the machines for hours sometimes while my parents shopped around. The employees never seemed to car as long as I was just sitting there typing.   They had 3 or 4 different desks and computers setup. Usually they had a Commodore 128, a Commodore Colt, and some other kind of PC setup on a different table that had VGA graphics as I recall. That was the setup for the longest time.

Unfortunately, none of the stores ever had any software running on them, so I usually just played in BASIC on the Commodore units. Sometimes I'd write programs and leave them running for other customers to find.

I do recall that Electronics Boutique had Amigas on display and they would actually have games running on them.

Yes.

> How sad is that?

Our local Atari dealer was Software Alternatives. Had a really great guy for the owner - encouraged everyone coming through the door to grab stuff and play with it. He sold hardware, software, and did repairs. One time, I managed to blow parts of a SC1224 monitor and my ST's sound chip up, when I tried to put stereo speakers in the monitor. I took it to him for repairs and he had it done the next day - he asked me if I had tried to hook the monitor up to an Amiga...I laughed so hard I almost cried. :)

One of the saddest days ever for me, when he announced he was closing up shop. Still, it was a happy ending of sorts. This guy made a small fortune off Atari, and when he read the writing on the wall, he managed to get out while the getting was good and retired to somewhere in Florida. Last I heard, he was still doing great. I'm always glad to hear those kinds of stories, instead of the usual "I lost xxx money with Atari" kind. :)

 Trash Taken Out

>You have no intention of giving me my cartridge back,
> Rick

*
I've done a little research, apparently you thought I didn't know anyone
or anything.
Last time I am going to attempt to return this cartridge to you.
If you want it returned then you must send me your snail mail address.
Call it a Security Measure or what-ever you want.
I will not return it without you providing a address.
If you do not send/post the address then you can blame no one
but yourself. I'm done with this.
*

I liked the Kmart - they had nice kiosks of Commodore and TI equipment. And this was '82, when TI hired nice-looking young ladies to demo their equipment! I remember the one at our Kmart gave me her home phone number!

Stupid me, being the uber-geek I was, I called her alright! To ask her more about the TI-99! (argh!)

I, too, liked to key in programs on unattended displays, like a FOR-NEXT loop that would give me long enough to vacate the store, then a CALL SOUND with all the voices set to full blast. I'd turn the volume up on the monitor/tv just as I left...

I don't remember Service Merchandise having computers - ISTR that the one in our area closed about two years after I got my telescope through them (this was probably 1979).

I did a lot of shopping at Toys-R-Us (got my Extended Basic cartridge there - $99) and Eckerd's (got Tunnels of Doom there, for $29, it was supposed to be $60 but my friend at the register sold it to me for a sale price that did NOT apply to Tunnels of Doom)...

These days you can walk into a Best Buy and play with the computers, but it isn't the same. The computers are too much alike, and their demo videos are way too boring.

And their "extras" are too "end-user", meaning I was shopping for either a NAS hard drive solution or USB/Firewire. Only the $300+ NAS one was RAID capable, the others were not. I'd like to find a store with hard drive enclosures that offer RAID or not that would allow me to insert my hard drives of choice and do some configuration. We are not *all* blooming idiots these days, some of us still like to choose!

Definately. I never play on demo computers. I mean, once you've
played with Windows on one computer, there isn't much difference on a
different one.   I used to like to play on the computers in the stores
because the only platform I knew was the C64 and Vic-20 and so this is
how I first played with MS-DOS, the C128, and even the Amiga for that
matter. Can't remember ever seeing any Apples or Macs on store
displays, but we had those at school and I didn't like them at the
time. I also briefly played with some Atari 8-bit computers at some
store, but I can't remember which store it was. Never could do much
more than type in a few rudimentary BASIC programs, though.

The machines were usually behind clear plastic locked doors, mounted on giant racks. Remember plucking the cards off of their rings and waiting in line at the merchandise booth to pick up your goods? There was fun in that anticipation, lost in this age of instant gratification!

> In fact, I would venture to say that as a kid, my favorite store to go

I spent a summer writing, in BASIC, demonstration software for the C64 and C128 that I would slip into any machines that happened to be running. A curious SM floor manager accosted me, in a very friendly fashion mind you, to ask what I was up to. After I explained myself, he was so delighted he gave me my choice of any piece of software for free. I think they ran my demo until the very last day they sold 8-bit machines.

>How sad is that?

I remember back then, anyone could touch it and even play with it a bit. Game carts were chained in to prevent theft but the main systems were often not chained so if you had bulky coat you could probably grab a free C64 back then.

The last time I saw any Commodore stuff at Sears, it was the newer C64-C and a 1541-II drive missing the disk latch lever.

Stores still leave the PCs out on display today but they are often password protected to prevent software tampering and the keyboard and mouse were strapped down. Laptops were also bolted in a security case that allows only the keyboard to be touched.

Was that the same BEST as this?

  http://www.best-electronics-ca.com/

They're still down in San Jose. I sadly failed to go visit them during
business hours during the coupla years I lived near SJ.

There's also B & C ComputerVisions, who are still around, and moved out
to El Dorado, California.

    Picked it up myself, although this was done using a fold up cart and
dragging it home by bus and subway. I was fairly careful, though come
to think of it, I had to get it down an entire flight of stairs, one push at
a time (rather bumpy there!), getting out of the guy's apartment.

    Well, I'll be...your solution fixed it! Pulled out my PLCC extractor, cleaned the pin's edges with a Q-tip and rubbing alcohol, firmly resocketed them and viola, it suddenly works!

I think I'm going to stick with my 1040-STfm though. While it does have a damaged RF modulator (hmm, wonder if that's repairable, it prevents me getting composite video!) it has a better quality image. After repairing this 1040-STf and powering it up, I noticed it has faint vertical lines running through the screen, plus the previous owner rewired the audio to a 1/4" audio jack on the back (which is nice but then you can't get audio output from the Atari RGB monitor!).

Now that the 1040-STf is working, I found out the toggle switch on the side does indeed change the internal floppy drive mapping from "A" to "B". Not sure what use that is. Also looks like it has the original 1.00 GEM firmware, I only see a 1985 copyright (whereas my 1040-STfm display 1985, 87). Not sure if I can use the 1.04 ROMs, I seem to remember the motherboard layout being very different last time I opened it. Weird since they're both revision D.

I'll probably give away/trade the 1040-STf, along with the 520-STfm I got several years ago (never really did much with that, since it had only 512K RAM and a 360K floppy).

Here in Melbourne Australia where I live, back in the 80s we used to ride our bikes down to Myers (massive dept store) where they had most of the 8bit machines in display. The TI, Sega and Spectrum computers mattered little to us because we were C64 owners and were there to check out the latest game(s) that came in stock. The display computers were all powered up and functioning and the staff almost never left the counter, i guess they figured kids weren't going to buy the hardware so why bother. They would happily open a software package for us to "try" if they thought there was a sale in it though.

What they didn't realise is we often went down there with a copy of Fast Hack'Em, asked to see the latest game then copied it and went home :)

In earlier times before I got my C64, I would go to K-Mart with my parents and while they sought out whatever it was they were going to buy I sat myself down in front of the demo C64 and kept myself busy. After a full year or so of doing that one turned up for Christmas :)

Mike

Don't have pictures but do have plenty of memories.

The store called Video Concepts in Hulen Mall in southwest Fort Worth always had an Atari 800 system set up in the rear of the store, hooked up to a big projection TV with _Star Raiders_ playing. This was in the early to mid 1980s. They also kept the ceiling lights dimmed back there to enhance the effect. I think this is the same store where I also saw audio CDs for sale for the very first time, when they were brand-new. Extremely expensive then. I never bought anything at this store because they were so expensive.

ComputerCraft was a rather large store in a shopping center a couple of miles down the road. They had a few high-end PCs or clones on display there. It was geared more towards the professional business computer user and not kids. The entire store was carpeted and resembled an office environment, IIRC. (Back then an IBM PC XT with a 10 MB hard disk cost well over $2,500!) Today that store, if not the entire chain, is long gone.

I used to haunt the local Radio Shack because they almost always had some computers up and running on the showroom floor. Usually it was the Color Computer. At this time (early 1980s), RS also sold some books filled with short BASIC programs. I enjoyed typing those into the demo units.

Some of the Best stores in Texas are still open. However, K-Mart closed all of their Texas stores several years ago. Service Merchandise is gone too.

In this area, Montgomery Ward used to have good computer displays set up.
They are gone too.   :-(

"David Murray" <adric22@yahoo.com> wrote ...

> Unfortunately, none of the stores ever had any software running on
> them, so I usually just played in BASIC on the Commodore units.
> Sometimes I'd write programs and leave them running for other
> customers to find.

I used to type in a program something like this (C128 version)

```
10 SCNCLR
20 PRINT "TYPE YOUR NAME AND PRESS RETURN"
30 INPUT A$
40 PRINT A$+"   ";
50 GOTO 40
```

The fun was in lurking nearby to watch as someone fell for the bait. First they would stare in awe as their name filled the screen. Most had no idea how to stop the programs endless loop. Then as their name continued to scroll all over the screen, many would become nervous, thinking they had broken the computer.

Some would sneak away as if trying to escape before their blunder was discovered. An occasional honest soul would ask the clerk if they would have to pay for the computer they had just broken.

Some of the clerks were wise to me, and would grin at the customer, then point at me and tell the customer, "I saw him playing with the computer just before you came along. I think he may have done it!"

Computers were more fun back then.   ;-)

http://www.ppest.org/atari/fromhd.php

Statistic: total 82 titles for DL. 21 was just checked and ZIPPED, 24
easy adaptation and 37 hard adaptation - for running from hard disk,
TOS 2.06 , STE and Falcon compatibility, as is in table.
Launchers for many games are redone for easier usage, with some anim.
and HW detection. Will be so for almost all.

On page are some demo videos taken from diverse Atari machines with
diverse hard disks/cards. + some supporting utils.

Future plans: playing multi-floppy games from hard disk even on
machines with not much RAM (512KB, 1MB). It means that no RAMDISK will
be used for storing floppy contents but special game cache area on
hard disks/cards. It is now part of hard disk driver and partitioner
under development. Done 3 titles for GAC: F1 GP (only 512KB is
enough), Purple Saturn Day and Battle Command. Soon: Dragon's Lair (7
floppies). It will work with ACSI attached (Satandisk, SCSI drives via
adapters - both tested) and IDE (tested too) interfaces. Titles for
gamecache will be available for DL as soon as driver will be finished.
And of corse, more adaptation will coming...

as for me, you don't need to set such hard conditions -- asking for
1-2 MB machine is quite OK as well. Imagine what kind of users own/use
harddisk? Certainly not guys with 520 ST :)

I recently acquired an Atari 1040 STe. I would love to use it but do
not have the OS on floppy. I only have the computer itself.

Where may i acquire images of GEM OS and how can i write them to a
floppy disk in Windows XP or Linux?

Any resources would be helpful as i do not require a lengthy decription. I really just dont know where to start.

Also, Am i considering the right path when looking to make a floppy of
GEM OS, or did the Atari 1040 STe come with the OS on ROM?

I had a 1040 STe years ago but am ignorant to all of these things. Any
point in the right direction would be helpful and appreciated.

Thank you.
Nathan

GEM isn't the OS. It's part of the OS. And it's embedded into any TOS
machine since 1987.
As it's a ST*e*, it's been manufactured after 1987, so all you need
to start and use it is plug and switch it on.
Moreover, bootable OS floppies wouldn't run fine on such a machine,
as they were made for early STs, which had a slightly different HW.

See above.

Regards,

J.-Luc

Arari ST machines have TOS, GEM, Desktop, all in ROM. Only very early versions from 1985 were without ROM TOS, and required bootable floppy with OS.

I gues that you want to do some file transfer in relations PC-Atari ST. I wrote program for that, about 2 years ago :

http://www.ppest.org/atari/floimgd.php

In archive you may find even image files of empty floppies, usable on PC and Atari. 720KB in DOS format, and 800KB in Atari format, but readable under WinXP with Floppy Imager.

If you want to make TOS floppy, bootable, it is possible too (although no need for it, really).

http://www.ppest.org/atari/tosload.htm - Get CREDISK.ZIP . Need some TOS image too. It can be found on diverse places for DL.

Note: with TOS itself, regardless is it in ROM, or booted from floppy you can not do much. You need aplications, games for Atari ST.

PP

Thank you very much, i looked some more information up and i realised
now that GEM is just the GUI for TOS. thanks again for pointing me in
the right direction.

Anyone here know why a the TT030 diagnostic cart would refuse to boot up when a 2MB ST RAM expansion board is plugged in?

I have a TT030 that I'm looking at. When I first was working on it the machine would just turn on with a grey screen (no Atari logo and memtest bootup). I eventually found that there was some corrosion built up on the two FUNNEL chips in the machine. After that the machine would successfully boot.

Then I tried using the diagnostic hardware to put the machine thru an overnight test to test it. But I could never get the machine to boot up with the diagnostic cart but it would boot up with the Terminal Emulator cart. I had installed a TT RAM expansion board and a ST RAM expansion board so that the testing would exercise the expansion slots. It wasn't until yesterday that I discovered this weird issue with the expansion board.

I believe the machine was converted from a UK model (ROMs replaced with US verison of TOS). I'm wondering if there is anything else that would've needed replacement/upgrade when converting from a UK model to a US model?

Regards,
Glenn

I have an Atari Falcon 030 in a Desktopper case. It has a 16 Mhz CPU,
8 MB memeory, and a 3GB hard drive.

I live in the Washington, DC area.

Steve

Any of those desktopper cases available anymore? Gotta be easiers
that everything involved in transferring the falcon sysboard to a
tower case.....sure been a pain for me!!

Sure like to see some photos of your Falcon if you don't mind.

Just out of curiosity, how much would you want for your Falcon? I
live in Ashburn, Va.

Thanks

Bonsoir

Download on my homepage or directly in the folder:
http://rajah.atari.org/files/ -> kkcmd_uk.zip (75KB)

New features for this bad Total Commander clone:

+ ST-Guide documentation
+ iconification
+ use of AVSERVER to open non-executable files
+ Ctrl+S = save preferences ad paths
+ '�-la-Total-Commander' file selection: red or gris�,
  when playing with keys, a framing cursor is used.
+ the 'Insert' key selects the file/folder under the cursor
  (Merci MiKRO)
+ split file like in Total Commander
+ unsplit file (double-click on .CRC file)
  split/unsplit results are created in the opposite window.
  (Thanks Dbug/NeXT)

Voil�.

I have to study the .ZIP file format. It's a big piece of cake, so I
prefer to release something now. I'm not sure I will be able to
implement the .ZIP compression in the KKcmd.

Regards.

Hopefully the attachment will come through, I haven't tried to do this
before. The photo shows the Desktopper case plus the separate
keyboard.

I will give the Falcon away to a good home for free. I don't use it
anymore and it is just taking up room. I also have a tremndous amount
of software installed with all of the original disks.

If you are interested, contact me via email and we can arrange a
meeting.

Steve

"Piece of cake" means that it's an easy job, which I don't think you
meant to say ;-)

You can't send attachments to text-only groups such as this - you'll
have to bung the pic onto a web site or email it directly.

Yes, you understand my meaning. Sorry for the bad translation.

I though about "gros morceau" ("big part/slice), and had in mind the
expression "�touffe-chr�tien" (choke a christian believer), which is
said when the cake is really hard to eat, so dry and copious to chew
that you have the feeling of Death coming near you just before you
swallow the stuff.

Regards

Pierre

I'd call that sort of cake "worthy" I think, with nothing about it to
make it palatable :-)

Lovely expression though, can't think of an equivalent one from England ATM!

Great job! Thanks for that.
According to ZIP, What do you think about plugin's implementation?

Cheers
Cyprian

Hmm, I've got a picture of it using PAN - kinda darkish, but its there. :)

Hey guys,

Long ago I was just 14 years old and was forced (and I could have
pitched a fit but stupidly did not) to throw away a Mega ST2 with Xtram ram
deluxe, megafile 30, 520 ST and an SC1224 monitor. I've long since
realized how stupid this was and I'd like to acquire the following machines to
complete my collection
520 ST (preferably STe)
1040 ST (preferably STe)
Mega ST
SC1224 monitor (and SM124 if available)
Original Mega STe case (but I have the machine)
external DSDD floppy drive(s)
crazydots cards or other obscure video/network cards
accelerators like icd adspeed
ram expansions...
magazines, disks, software packages, etc. I've been collecting
everything. I even have a 1995 toad computers catalog.and finally - anything that
would allow me to run more than 4MB of ram
in an ST/e based machine. The one that comes to mind is the Magnum
series of ram boards.
I'd like to acquire these machines dirt cheap as I don't have a lot of
money right now. They don't have to be perfect and it's ok if they need
a cleaning or small repairs. I have an extra TT I would consider giving
up in trade but I'd rather not. The TT has broken video (the video is
very dark) and I believe the 5V going to the keyboard needs to be fixed.
It's best suited for remote access running mint or using a video card
like a nova.
It'd probably be best to deal semi-locally only ... I live in Hatfield,
PA
If you want to communicate via email, I'm mducksub and that's at
atari-source.org
Thanks,
Mark

I have a MegaSTE for spares I might part with. its got a standard PC
1.44 (in Atari grey) fitted and milled out professionally as well as a
spare standard Megaste top. Just no ashtray. I will rat thru my parts
for you if you like and see what I have spare. I do have a few modded
STFM's sitting around somewhere.

I'm in Australia tho mate. So monitors may not be practical;-)

Mark

The shipping from Australia would preclude me giving you what the
machines are worth unfortunately. But maybe not for the mega ste case.   I'd
really like a proper Mega STe case.
Thanks,
Mark

I've used Papyrus, Tempus Word, and AtariWorks. Papyrus seemed to work best for my purposes (MS Word compatibility and Web publishing). Tempus Word was good, but lacked some features I needed in some areas and had too many features in others, and the UI was hard to look at (small, jumbled together black and white icons bug out my eyes). AtariWorks was decent, but very basic. If you're not looking for "bells and whistles", then it might work best for you. It all depends on what you're looking for. If you're more into DTP, PageStream was good.

"That's Write" from Compo in the UK was superb and I wish Pagestream
was still around it was great for it's day and they were going to port
it to the Mac - dunno wot happened with that

Can i use an atari joystick for mouse funcionality in GEM OS?
Is this possible? I havent tried it yet.

I do not have an atari mouse but have an atari joystick.

just asking out of curiosity, i cannot find much information about
this.

thanks.

Bonsoir

Download on my homepage or directly in the folder
http://rajah.atari.org/files/ if you are used to the archives names

> Litchi 1.1D (GEM ftp client)
- no more crash under monoTOS after upload or download file (av_path_update should not have been called under monoTOS)
(thanks Cooper and SimonSunnyBoy).
- Tab instead of Space to swap windows

> KK Commander 1.1C (Total Commander mock-up)
- fix: correct options if right-click/pop-up menu in disks list
- confirm is now by default, in the copy/move formular
- space: no more swap windows, now select file under the mouse pointer
- fix: column positions correctly saved/read
- fix: font height correctly saved/read
- add .APP as launchable
- F2: swap windows contents and new dir

For KKcmd, I will keep this version on my website, for people who need
a small and not-too-fat program.
I'm working on floopy disk hard and soft format, and CRC32. KK will grow
a bit fat: want to add floppy format and MSA management (including opening
a MSA file and list files and extract them).
Studying also: split/unsplit �-la-Total-Commander and maybe pkzip
managment if I find some understandable C source or PKZIP.LDG

Voil� !

Hello,

I think I have some problems with time server. Thoug the clock in my
computer displays the correct hour, the one displayed on the messages
I post is shifted -1. I think this was due to the data in the config
file for STiK.
I've currently changed for fr.pool.ntp.org, and I hope the hour for
this post will be correct.
Should this not be, could someone advice me a correct timeserver ?

Regards,

J.-Luc

I don't know anything about Eiffel, but I've tested KeyEdit on a Falcon040
with a TT keyboard, running the current FreeMiNT kernel and Alt-keys work
fine. The Eiffel interface is very configurable, I recommend studying the
docs thoroughly.

Yep, I can at least attest to this with Leonard. Found a few JPEG pictures
stored on his hard drive. But then again, other male employees at Atari did
this too on TT030 workstations.

It's obviously nothing to do with the timeserver that is declared
into STiK's config file. :-(
In everything I post, the hour is wrong (-1 hour), though the one
displayed on the taskbar is right (as well as the one that fastly
appears when booting).
So, it isn't a matter of a timeserver, but something that isn't set
correctly. Unfortunately, I couldn't find it so far. :-(
Any idea where I should look for - before I get nuts - ?

Regards,

J.-Luc

   BigDOS can work with max 2GB partitions. And itself supports not
long filenames.
 So, you will not be happy with it. 4GB FAT16 is barely used, only
under Win NT, as I know,
Not much support for it.
  Btw. BigDOS sets not all partitions as GEMDOS, only Big FAT16
partitions from >32MB   and <2GB.
 Is it FAT16 for sure? Not FAT32 ?

  PP

What system? If SpareMiNT, you might have an incorrect timezone
in /etc/sparemint/timezone. If not, I don't know.

Lichti works just fine. The problem was mine. The configuration file had
two different configurations in it. Cleared it, started over, and it
worked.

Will get the newer version, which does not quit after working in single
TOS. My MiNT box died in its sleep, then its power supply went up in real
flames, and is in the process of being fixed.

Of course I will register it, as soon as I get some Euro to do it with.

Jim

Even when I was until now to leave any feedback, I'm regular
downloader / user of KKCMD and Litchi.

First -- many thanks for this nice software!

Second -- do you think it would be problem (for both products) to make
just one window instead of two as it is now. Of course, both
approaches have their advantages but I don't know... it feels strange,
esp. with that KKCMD in comparing to TC (which is your model). Another
thing would be use of Insert / ClrHome keys -- esp. that Insert is
more intuitive than shift+arrows.

```
But this is only my opinion, feel free to ignore it ;-)

Good to hear it.

No really need for that. I say it's a shareware, but in fact, it's more
like a 'donation-ware' (we don't have a translation/habits for that sort
of thing).

Regards

Bonjour

MiKRO / Mystic Bytes a �crit :
> First -- many thanks for this nice software!

Merci for your thanks. I'm happy to release something useful.

> Second -- do you think it would be problem (for both products) to make
> just one window instead of two as it is now. Of course, both
> approaches have their advantages but I don't know... it feels strange,
> esp. with that KKCMD in comparing to TC (which is your model).

For the Litchi, I prefer to keep two windows, because the local files
window can be closed and you can replace it by interacting directly with
the desktop, as the old aFTP way.
In the lastest bugfixed version, 1.1D, you can use Tab on every window,
it will top the distant files one, then swap with the local files one.

For KKcmd, well, the problem is that i do not use TC myself...

If in one window, the part of code to manage all GEM objects
(scrollbars, object positions, etc) would be a great deal of work. Two
windows and using Tab is easier and produce smaller code.

So it's possible for KKcmd, maybe in the future, but now I have some
other tasks: floopy formating (finished), floopy quick format, MSA
(should be very easy now i understand floopy format), slipt/unslipt, etc.

> Another
> thing would be use of Insert / ClrHome keys -- esp. that Insert is

> more intuitive than shift+arrows.

I'll study that. Thanks for the suggestions.

Regards

Pierre

Er... it seems far more weird that I thought :
- the hour on my FalCT60 is correct (boot time, taskbar, aso.),
- the hour of a post I sent, when displayed by Troll, is -1, but
- the hour of the same post when I use Google groups is OK!
So... ??? Where do I have to search for ?

Easymint is an installer for Sparemint, so your system is really
SpareMiNT. I think you need to edit the file /etc/sparemint/timezone
before running the command you write above.

>
Yes, of course, I didn't mention it, but I did it before running
the command.
However, if I correctly understood the help text into the file,
it says that it operates at install.
Anyway... the time displayed on my computer is OK, as well as the
one reported when I read the posts straight from internet, and as
well as the time of the mail I send.
But, the time reported by Troll is wrong!
If someone can confirm that the time of this message is something
near 23:57, then Troll is faulty, as it will display 22:57.
Am I the only Troll user that noticed that ? Or, am I the only one
whom it happens to ?

That's it : the time in the header is 23:57, but Troll reports 22:57!
I don't know how it can be! :-/
I think this thread should end...

The user is faulty not to fix in the options (display > hours or misc)
the value for the GMT "offset" / "decalage" / "lag"...

Depends of winter/summer, the offset in Paris is +2/+1

As my Granny said, u have brain, so use headology.

Regards

Pierre

Yes, that's right : I thought that one had to adjust the time shift
from greenwich with the function above, then Troll did manage the
summertime itself. I was wrong, obviously. :-(

I don't see why not. When the ST was launched there was a good range of
office software, including databases and spread sheets.

I have long since stopped using Ataris , I have a STacey that I bought for
an arm and a leg, I put the full 4 meg memory in and broke my nuckles
fitting a one gig internal drive and HD floppy,the whole thing cost crazy
money,plus due to a wrong repair diagnosis there is a spare screen, It has
sat under my desk for many years, is it of interest to anyone?.I would not
be willing to post such an old rare item, I live in greater manchester and a
buyer would have to pick it up and try it out,I have forgot more than I ever
learned about Ataris so no questions please,At the moment I don't wish to

leave a real e.mail addy, if anyone is interested I will sort out a contact
Cheers K

Hi folks, I wanted to step in here and give you folk a quick update on the ACEC Vintage Computer and Video Game Swap Meet being held on Saturday 09-13-08 from 9 am to 3 pm in Columbus Ohio. I found out that the westbound lane of Cooke Rd has been closed for construction between
Maize Rd. and I-71. I don't know if this effects the eastbound lane or not. There may be some construction delays. I would suggest that anybody going to the swap meet use the E. N. Broadway exit of I-71.

Please see our website at acec.atari.org. for more information about the ACEC Vintage Computer and Video Game Swap Meet. Or you can email me
at colonel_charles@yahoo.com.

We are still taking reservations for

Hi,

I've got a Netusbee connecting my 4mb Mega-STe to my PC.

I've connected the Ethernet cable from the Netus to my Netgear router. My ST has an IP address 192.168.02. I've tried pinging my ST from my PC and this works.

So far, so good.

Now the dodgy bit. Can anyone give me simple step of how to transfer files between the two ? I've tried FTPing 192.168.02 from my PC, no success. I then tried using Litchi but again I'm not sure what to do.

My MSTE is TOS only, is there a solution for this... or must I use Mint?

Any help appreciated.... had my Netus for over a year and not used it yet (flooded house problems!)

First off, IP's should have 4 numbers, not 3. My guess is the IP is actually 192.168.0.2, *not* 192.168.02 (unless this was a typo).

> My MSTE is TOS only, is there a solution for this... or must I use
> Mint?

This depends on what drivers and TCP/IP stack you have for your computer. If NetUSBee comes with a STiK/STing driver, you should be ok with TOS and those programs. If it only comes with a MintNet driver, you'll have to use Mint (it is possible to have a minimal Mint setup with MintNet on a slim system), or it might even work with Magic if you have that and MagicNet. I've not used a NetUSBee, so I can't say what drivers it needs. As for networking, once the drivers are running properly, setup is pretty much system independent, and I could help you with that end.

> Any help appreciated.... had my Netus for over a year and not used it

Since you're mentioning TOS i assume you're using STiNG. Do have an
FTP-server installed on your ST?

Try to run a FTP client on the ST with TYPSoft FTP server running on the PC (http://en.typsoft.com// a free program).

Guillaume.

Thanks for all your speedy relies :)

Yes, just to clarify....

Firstly my ST is 192.168.0.2 (missed a 0 out there)
I have Sting up and running, I followed the guide here :-
http://hardware.atari.org/manuals/netsting.htm

So as I mentioned by PC can 'ping' my ST. This works under normal TOS.

As for FTP servers.. I guess this maybe the *slight* problem ;) So I
need a FTP server set up on my PC..... this is were I need help I
think, plus easy steps on the ST side of things to connect to my PC
(or vice versa)....

I must admit when I bought the NetusBee I thought it would be similar
to PC2Amiga were things ran in the background (TSR) and the PC or ST
drive showed up on each machine.. .but we can all dream :)

Cheers
Phil

It might not matter so much which end is the server, and which the client.

So if you decide that the PC is to be the server, then you'll probably want to give it a fixed IP address. Ask again if you need help for this.

Then, armed with whatever ST ftp client, you will know what address to type into it.

There is a solution for this, but IIRC you need to be running MagiC (or
maybe MiNT, just in case anyone is about to jump up and down!) :-)

Hello,

I have done this many times with great success using the FTP protacol. You first have to run a ftp server program on either machine. Get it up and running and then run a ftp program on the other computer and set it to the address of the other computer. The file should come up and you can then either download or upload the files you want.

Sorry but the brain fades. I am sure there is a background FTP server. I
think the one I used came from here:-

http://www.ettnet.se/~dlanor/sting/html/file.htm

And I used that with a windows graphical FTP client, but again I forget
which one...
.. arrggh but I dod remember I tried a number before I got a pair that
worked well together.,...

Any Falcon owners left that have a original Factory 2.5 internal
IDE hard drive, that still works?

If you have one or more, and don't need it, I'm the person you
should contact if you want to get rid of it.
Only need working or was working last time I used it models. 8-)

Also, anyone recently replaced/upgraded a Falcon Internal IDE type

Hard Drive?

I'm interested in known good 2.5, IDE type replacement models
for Atari Falcon 030s. Need Brand, Model number, and size info
for future reference.

You can e-mail me the info, if you do not want to post.

I have a few, not original Atari models but the same Seagate and Conner
models from that era. 45mb, 65mb and 80mb iirc. I'll see if I can find them.

I have an 2.5 4.3gig in my little Falcon and a 3.5 6.5gig in my towered
falcon. No wukka's there.

Mark

Most models from that time that I have seen are SeaGate or Conner.
If you can find those, I'd much appreciate it.

Time to try again. You said you would return my SDX as soon as you found
another one. It has now been over three years and I know you have at
least two from your posts.

Rick

Hi,

On Sat, 2008-09-13 at 18:58 -0400, phantomm_1 wrote:
> Any Falcon owners left that have a original Factory 2.5 internal
> IDE hard drive, that still works?

I have a spare one lying around from last year when I switched my Falcon
from HDD to Compact Flash. It's a Toshiba with 40 Meg or so.

But be aware that those little suckers can become quite loud once the

Falcon is running for a while. That's why I replaced it anyway. Ah,
gotta love that absolutely quiet sound ...

With kind regards,
Dennis Schulmeister

Hi Rick,

I have no problem returning the worn out, water damaged SDX cartridge that
you sent me.

I never could get it fully working. You knew the condition of it when you
sent it.
If you like, I can post your exact e-mails here.
I did remove the case to get at the PCB, to see if a good cleaning could get
it working.

If you like I can fix it, but it will cost you and I don't work cheap, not
anymore.

Sigh.
```

It is against my principles to post your private emails to a public forem. People in the Atari communitee have known me for over 20 years and I have met many of them face to face in user group meetings. My personality is not in question.

If you would like, I will pull up one of your own posts where you said you preferred my SDX to a later version. If it is so damaged, I don't see why you never returned it. You told me all it needed was the contacts cleaned. Now your telling me you want to pay you to fix it before you return it?

Look if you busted my cart just admit it and return it. I don't hold grudges for stuff like that as I am sure it was unintentional but drop the insults.

Rick

Well it's not against my principles when TRUTH is being distorted.
I'm not asking you to pay anything. Because I refuse to work on it.
It has been in a box for along time. I did attempt to clean it and it did
work for awhile but due to the rust and water damage it was not
stable to use. Why you think I bought another one.

I can reburn the chip or replace the chip, which is the problem.
But that will cost you if I do it. Which I am not going to do for free
and then simply return it to you.

I'll send you the cartridge as it arrived to me, No charge for the
cleaning.
I really don't know why you have made such a big deal over it.
You knew it was damaged when you sent it.

BTW,
I've put up with your cross posting this matter into newsgroups.
The matter should have been kept in E-mail. Things would have
went much smoother.
If you have 20 years experience in the Atari commuity, then you
should know better than to start crap in a Public Forem.

You need to check your email on the topic since your memory seems to be failing. IIRC: You did not buy a new one, you tried to get an upgrade ROM and when it didn't work, Mike sent you a free SDX cartridge.

I only asked in the two Atari newsgroups which isn't exactly wild cross posting.

You really need to take a deep breath and count to 10. Like I said, you told me you would return the borrowed cart to me as soon as you got a replacement. Once again, you said you have a replacement that Mike sent you in July 2005, so what is the problem with returning my cart? I would venture to guess that most people would consider me to be rather patient under the circumstances. I will warn you that you are quickly running out of my good will.

Rick

Hello,

I need some help to setup an Ethernec Card:

http://pagesperso-orange.fr/gtello/ethernec.jpg

Can you, looking at the picture, tell me:
- what is the good orientation to plug it into the rom port? (A or B?)
- what is the correct orientation of the ISA card? (C or D?)

What kind of Ethernet card can be used? I have:
- an Etherlink III (3Com)
- a common ethernet with chip APX EDI 95C02

What cable must be used for a computer to computer link? (no computer to modem).

Thanks!

Guillaume.

D looks right, could I cant 100% say as I've not seen this version
before.

> What kind of Ethernet card can be used? I have:

Use Realtek RTL8019AS and if it is jumperless, use a PC to set it up
to port 0x300.

> What cable must be used for a computer to computer link? (no computer to
> modem).

Crossover network cable.

I've been reading that Atari manufactures two Atari TT Models. The early 16Mhz models and the later 32mhz editions. How can one tell the CPU speed of the TT they are running? Also, did the later TT's have the 1.44 MB drives or the 720KB? Thanks.

You can use a program like sysinfo to check out the cpu frequency I guess.

Only CPU is 32 MHz on some late machines... the bus is 16 MHz on all TT.
And the ST-RAM & TT-RAM accesses are 16 MHz....on all machines....
I just heart at the moment that the last rev of the mb (rev. H) are 20%
faster....but I never get the info WHY.

TT was a bad machine in 1990, surely a good in 1988.

Last I knew Apple will not allow emulators on the iPhone platform so
any port would require a jail-broken iPhone.

The first MSTE & TT were with 720 KB units because of the TOS 2.01 and 3.01 that was not able to manage 1.44.
With TOS 2.05/2.06 & 3.05/3.06 (for TT), the floppy is ok with 1.44. But sure you need a 1.44 unit AND to put ON the 6 th dip switch under the

HDD place on the mb.

PS : The first MSTE mb have a hardware bug with a missing trace on the
PCB AND a bug in the UA02 GAL.

"Staycation"? I love it.

I don't think Bravo Sierra Computers gets enough recognition for some
of the best Atari marketing continuing in the tradition of the classic
Atari commercials.

I ran Sysinfo on my TT and it always saus "32 MHz" even with my CaTTamaran 48 MHz...

You can use Speedo Meter and you should have a value of 550% (with cache ON). I can send you this little tool.

Guillaume.

Sorry for taking so long to reply to this, I thought I had replied earlier.

When it tries to load the tbl file it shows a -26 error.

Peter

No, I have only two mesaages:

$4f4d	20301	M_ASKVAR	Interface
$4f4e	20302	M_SENDVAR	Interface

But I don't know where I found them. :-(

> author but all attempts to mail him bounce.

The address in the printed manual is old. I ask Michael Bernau, author from the MyDials, if he have more information.

Bonsoir

Download on my homepage or directly in the folder:
http://rajah.atari.org/files/ -> kkcmd11_uk.zip (~50KB)

New features:
- disk list (with icons, up in the partition root or use Alt+F1/F2)
- font size can be choosen (of none selected, then default size)
- some changes in the key shortcuts (taken from similar programs,

careful, the GEM shortcuts prevail. See text file)

Merci Didier, Dma-Sc et Arklif

Voil�

Gerhard Stoll <Gerhard Stoll @ B> worte:

> I ask Michael Bernau, author from the MyDials, if he have more
> information.

He have no more infos, but I found an old manual from 1992.

In short form:

A program send M_ASKVAR to Interface, this answer with M_SENDVAR. In the bytes 8-11 is a pointer to struktur with many functions.

```
LOCAL VOID *funcptr[] =
{
  0L,
  &rsd_namen,
  &sel_window,
  &sel_objs,
  search_window,
  find_window,
  find_top,
  is_top,
  .
  .
  .
  normkey,
  find_rsc,
};
```

The functions a from the book "Vom Anf�nger zum GEM-Profi" [1]

In the bytes 12-15 is a pointer to Interface variables.

Do you need more?

Gerhard

[1] Phoenix use also this library.

Version 3.97 of TeraDesk open-source desktop for the 16-bit and 32-bit lines of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release brings fixes to some not-very-critical problems that have been detected, and also a couple of small cosmetic improvements. Work on some other fixes and improvements is in progress. See the development history file for details.

Have fun.

Greetings everyone!

Here is the lucky winner for July 2008 at The DarkForce! BBS:

July 2008
1. TOS 2.06 chipset - jimarm wins this for his ST!

Also, here is the prize for August:

August 2008
1) A Mega STE motherboard (partially populated). This will
   include a TOS 2.06 chipset - courtesy of Techie_Allison!

Check AtariAge and the AtariForums for a picture.

Congratulations to our winner, and good luck to this months callers!

 :)

Folks, I've been unable to deliver last months prize, despite repeated attempts. The user "Cedric" posted an invalid address to his account.

Now I understand everyone's need for privacy these days, and it doesn't bother me a bit if a user starts an account with bogus information, like their age, phone number, birthday, etc, etc...

BUT...if you're expecting to win *and* receive a prize from us, then the least you can do is have an accurate address. I have a full time job, 84 hours every 2 weeks/12 hour nightshifts, plus a family of 5 and honestly, I don't have the time to chase everyone down. I've left e-mail with Cedric on the BBS and I hope he gets and returns it. Until then, there's nothing else I can do.

Just for the record - DarkForce has never lost any user information, due to being hacked, nor have we ever give out information to a third party.

Nor shall we ever.

Thanks to all our dedicated users and the Atari community.

Hi,

a friend of mine is to leave the Atari world totally. So he will offer all of his stuff to anyone interested.

At least 10 b/w monitors SM 124, more than 4 1040STF, about the same quantity of MEGA ST4, some hard disks some removable disks with cartridges, of course, and and and...

If interested, send an email to *m.hosry@t-online.de* and be prepared to get to Berlin or Stuttgart.

Und TTsch�

I am having problems running Pixart 4 under MagiC 6.01 on my 14MB
Nemesised Falcon. It loads OK, but trying to use any of the tools
fails - I can't draw, or drag out a box for cutting etc. at all.
Without MagiC (but leaving NVDI running) all is OK.

Anyone else have this problem? And found a solution? (other than
booting without MagiC, which is what I do when I need to use Pixart)

Regards, /Peter/

Hello

Has anyone got Lichti running to a shell host, such as shell.panix.com, yet?

It tries to log in, and gets timeout errors. It may be that my shell's response time is too short for it.

So far I am clueless, and any clues would be appreciated. It sure looks like a very useful program.

Jim

Only FTP protocol. SSH is not supported, and may never will be.

Does anyone have a copy of MT C-Shell that I could get a ZIP file of the
install disks for? I got a copy along with the manual, but the install
disks are unreadable for the MT version, leaving me with only the Micro
C-Shell version working..

I would be most appreciative if anyone could provide this.

Thanks.

Jason

Hello everyone,

Overvoltage during a storm 2 months ago killed many devices, including
my computers.
I received my fixed FalCT60 from Rodolphe last saturday, and I'm on my
way rebuilding my system.

I found my HD suffered from the surge, so I'm currently running from a backup drive with only minimal data - because too few space : the other was 20 GB, this one only 5, so I can't restore the data from my backup on tape -.
Now, I own another 20 GB HD, and my wish would be to install the MiNT stuff on partition Q:\, thus still being able to access data from other partitions when running plain TOS - unless someone can manage to make Cubase run under MiNT, which I strongly doubt -.
All my attempts for installing MiNT on a partition over P:\ failed.
Did anyone manage to do so ? Did I forget something ? Did I miss something among the many pages I browsed ?

Thanks in advance,

J.-Luc

Ouch! Very very bad news, Jean-Luc. Really sorry for you.

TOS only allows partitions A through P. It is MiNT and Magic that extend
that limit to the letter Z. Unless HDDRIVER extends that limit also for
TOS? Not sure there. Anyway, you would probably be safer just
installing on a lower letter partition, if you can.

Cheers,
JFL

Hello J.-F.,

Well, all partitions up to P: ought to be TOS compatible, until I can
finaly fix my SCSI transfer problems.
I wonder whether it wouldn't be possible to force the installation on
a partition beyond P:...

What do you mean when you say "installing MiNT on a partition over P"? As
other have said, MiNT is started from TOS, and TOS does not recognise
partitions beyond P:. So your BOOT-partition must be between A: and P:.
This means that mint.prg and the mint-folder must be on your
boot-partition.

However, nothing prevents you from installing the rest of the system on a
partition beyond P:.

I was refering to the LNX partition : if I set it for instance to Q:\ or
R:\ (those exist on my disk), then it refuses to install the stuff.
>
> However, nothing prevents you from installing the rest of the system on a
> partition beyond P:.

So something must be wrong wit my system : it states that there is no
LNX partition, though Q:\ is set as such.
So, I'm going to repartition my disk, give it another try and then come
back here and report.

Have a nice day,

J.-Luc

From the time before I put a full ext2 Easymint distribuion on my Milan
I have a tar.ttp and version of gzip on a TOS partition that woul extract
this but I can do it with FreeMint now unless someone has beat me to it.

I'm pretty sure one can extract this kind of archives using plain TOS.
Look for gzip124b.zoo, gtarbin.zoo, sttar.arc, packshell. These utils can
be found on almost every Atari ftp-server

I have Atari 800XL system, main, CPU or "console" unit - whatever it was called (I am not an expert on vintage computers/games). Owner claims it WORKS FINE, but since Chess Game memory cartridge failed they never used it, chess was the only thing they cared for. There's another cartridge from Citibank and I dont know wha tit does, I am quite sure main unit works. Video cable is included, even monitor is available but I doubt anyone wants a small CRT whitish monitor these days, it's probbaly better to hook up to a modern monitor thru some sort of connector adapter. I have connectorized videocable for it.

Main unit looks like a keyboard integrated with CPU/mainboard, it's clean and owner says it works. Any interest?

Do NOT reply on Newsgroup, email instead and REMOVE "NOJUNK" strings in my address.

Best if transaction is conducted on Ebay 9for safety) - my Ebay feedback is 100% positive, not to mention a DECADE of Newsgroups trading without any complains.

Is it a spam? I not see any relation with Atari computing.
We often see discussion change with time but directly have no relation
at all this is not so usual.

Plain TOS with standard filesystem does not support a filename like
mypdf.tar.gz to start with. Renaming to mypdf.tgz first should not be a
problem even on a Windows machine. I have not looked inside the archive
yet if it uses long(er) filenames.

The Atari link would be that the Alone in the Dark series is/was produced by
Infograms, the company that has been trading under the Atari name for the
last few years.

This the C-Lab Combiner that allows you to switch and swap protection
dongles without shutting down your Atari computer. Useful if you use
several different dongle protected softwares.

Cool, Didier!

> Now Links displays background images.
> More informations here:http://links2.atari.org

It sort of saved my life. I was sans PC/Mac for a while and needed a way to access my Gmail account (to have some degree of contact with the outside world besides IRC & ICQ).

It actually works (bit tricky though):
- go to http://gmail.com/app
- select log on via browser
- enter your login info
- reject the javascript
- a weird link appears in the upper part of the page. Click it.
- Another weird link appears in the upper part of the page. Click it.

TA-DA! There you have it!

Hello,

Here's what I've found:

http://pagesperso-orange.fr/gtello/new.htm

The inside is dirt, no metal cover. I'll have to clean it before switching
it on to test the computer.
The mother has little modifications: 3 resistors cut and a strap.

Guillaume.

Hi again:

SYSINFO83 tells me:
- bank0 : 512 kb
- bank1 : 2048 kb

But it is a 1040 with full ram on the mother board, so I expected bank0:
1024kb, am I right?

And the expansion board says 4MB exp ram, so, why only 2048?

Is there a software driver with this board to configure correctly the RAM?

Guillaume.

i have steinberg cubeat , the older model of cubase!

its version 2 and just recentlly fell into my possesion
but the disk has decayed and won;t boot correctly...

my request is for a copy of the original disk..

if any body has a copy could they please forward to me..

this would be a huge help..

thanks
charles

Hello,

I have added another photo, closer.

http://pagesperso-orange.fr/gtello/new.htm

Looks like there are only 4 ram chips for 4Mb... So 1Mb eache? Was it possible at the time?

Guillaume.

I have done this under Magic with some success. I just run gzip first to get the tar file and then use Arcview.

>
> Regarding Disk Drive STEP RATE,

  Steprate is solved very 'elegant' in TOS 2.06 - it is set to fixed 6mS- So, good for HD, good for DD floppies. Not good for ears. For 5 1/4 drives 12 mS steprate is required - not problem, just need to set some system variable, or use some prg. for that. I remember about it - we connected some PC drive in time when PC Ditto arrived, some 20 years ago ? Of course, TOS sets not steprate automatically. I don't know about Falcon and TT, but Mega STE with TOS 2.06 certainly sets nothing automatically.

Actually, all TOS support 2.88 MB drives - TOS is very flexible considering diverse disk formats. Some people reported succesful usage of ED floppies. (and needed to set steprate to 12mS, likely) .

Btw. I just read on Atari forum that only dip switch 7 is used from whole block. Others are unused in Mega STE.

PP

Hmmm...6mS standard Step Rate???
Not on my Ataris...
All are 3ms, even the Falcons.
I have never used 12ms.
But have used 6mS for 5 1/4 drives.

Don't know if anyone is looking for this, but I've got Cubase 3.1 with
dongle and manual on eBay.

I can also ship without the manual, which will make it a lot cheaper
to ship.

Details here:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=170231714139

Thanks for reading.

There is 512k per bank. 1040 and 520 is Bank0 512k, 1040 is Bank1 512k.
So 2.5MB is correct.

I had a Marpet board that used a similar PCB. You might have to track down the instructions to see if the second bank is usable. It is also possible that it is only a 2mb board. It may be that the designers just used a single PCB for 2/4mb ram.

Mark

Hello,

So what I'll call the IC controler (40 pins) is labelled:
C025914-38A
PH23-024
7M2-10

And each of the 4 RAM chips (20 pins):
M5M44400AL
115SD50-8

That's it!

Guillaume.

Hi there,

time for another realease of good software. dialog is a tool to display a nice user interface for your shell scripts.

Get it at the usual place at : http://ragnars-world.homelinux.org/atari/

Bye

This is a 1Mx4 FP MITSUBISHI RAM chip with each 4 MBit which gives you
2048 KBytes total for your 4 chips.

I did not say that 6mS is standard step rate. It is just how is set in
TOS 2.06 to avoid bad work with HD floppies. Problem is that by DD
floppies it produces nasty sound.
What Ataris?  I didn't talk about Falcon, what btw, works not with TOS
2.06.
Will some 5 1/4' drive work with 6mS steprate depends on it's
mechanic. What I tried somewhere in 1988 worked only with 12mS well.

Hello all.

I'm cleaning house and getting rid of some old software for the ST. I want them to go to a good home but I really don't want to piece it out so if anyone is interested, you gotta take it all. All I ask is to pay actual shipping costs via Google checkout. The titles are as follows:

Games:
Amazon
TerrorPods
Batman the Caped Crusader
AB Zoo (educational)
Crack Down
Dick Tracy
Road Blasters
Road Warrior 2000

Development:
GFA 2.0 + compiler
DevPac ST 2
DevPac 3

Other:
Hippo Disk Utilities

If interested please send an email to :
last_atarian(at)yahoo(dot)com

and we'll make arrangements.

Thanks!

My it's quiet in here.

I had a Lite-On CD and whatever reader-writer box in a Syqyest 44 case, which worked for a while, and then halted booting. Thought it was a bus problem.

Thought I had solved most bus problems, so tried again, by changing ACARD cards. A version 3.79 came out, a version 3.64 went in, and all is well again. I do not think it is a version problem, but a dead card. It prevented proper booting with the card connected to the scsi bus but not to the IDE drive. That should be a major clue to a dead ACARD problem.

Do not give up yet.

Jim

Hi all,

Yet another NAS has passed and all of us who attended had a great time. This year we had 8 player games going, Jaguar gaming, a Coldfire experiement board booting up a patched TOS, standard ST, MegaSTe and Falcons as well as accelerated models, and more.

PHOTOS:

Photo gallery with pics by GokMasE from NAS2008 can be viewed here:
http://www.ataricq.org/pictures/2008-06-27/thumb.html

This years event was a pretty productive one, with some software and stuff being finished:

GFX:

Bear used a Tabby on his Falcon to produce a nice piece of gfx for NAS2008:
http://www.sak.nu/cutenews/data/upimages/NAS08.png

GAMES:

PeP released preview of "PeNES", his experimental NES emulator for 060-

equipped machines. It's based on a heavily modified version of NESCore, a nice open source NES emulation library. PeP says: "Don't ask me where to find NES ROMs etc. I have no idea."

kRadD released his new multiplayer game for 8 players, Grenz=FCberschreitung.
http://www.npoi.de/download.php?view.4

GAMING:

kRadD arranged a STOT competition for Kick Off 2, Speedball 2 and Grenz=FCberschreitung v1.0.
http://www.npoi.de/e107_plugins/content/content.php?content.32
http://www.npoi.de/e107_plugins/content/content.php?content.33
http://www.npoi.de/e107_plugins/content/content.php?content.34

DEMO:

STOS Bestens karma - the one and only demo that was made at NAS! A beta version of the demo was shown, and it contained music-synchronized text. The music was made by J in Triplex and the STOS-code was made by Kl0tt. An official version will be released later.

OTHER:

AtarICQ goes freeware. The most noticeable change with the AtarICQ 0.173 release is indeed in the change of the program license - it has now become freeware. The application is by no means discontinued, the change just reflects the fact that the program now no longer has any restrictions or naggings. In fact, the registration process has been completely removed. Some other small tweaks and fixes were also added, like for example the new feature that aICQ will now recall which TABs were open during the last session.
http://www.ataricq.org/ataricq/

Litchi-patches. Since Rajah was kind enough to supply GFA sources, GokMasE took the opportunity to tweak some stuff in the prog, most noticebly the possibility to drag files from the remote window to desktop directory windows was added.
http://topp.atari-users.net/litchgok1.zip (needs original archive at http://rajah.atari.org)

Thanks all who attended and made this years event a nice weekend! :)
See you all next year.

Regards,

/Joakim

And more XaAES (+ MyAES ?) friendly, as i saw the patches in the LST source.
Very nice work, thanks you.

Remarks:
- the text for FORM_ALERT is located is the RSC, for translation purposes.
- desktop windows to Litchi remote window Drag&Drop is possible, if the
desktop supports the Atari Drag&Drop. Magxdesk and multiTOS desk do.

The Drag&Drop from Litchi remote window to desktop windows is also
possible, but i have found no desktop using the Drag&Drop "PATH" method.
But you have implemented it via the AV_Protocol...

Since the schmilblick goes forward, i should be happy. Though feeling a
little suprised having not been asked an authorization for some
modifications; i suppose you decided to patch the Litchi to kill a bit
of time in the NAS party.

And feeling also a bit "deprecated" myself. And i do not know what to do
with Litchi developpment now. Include your patches in the official

release? Add some improvements to justity a new update? i have no idea
of new funtions, and nobody mailed some suggestions since a long time.

Best regards

Pierre

There were problems with WM_ARROWED and WM_BOTTEMED, nothing serious,
but should work a tad better with at least XaAES now :)

Yes, AV-Protocol seems like a solution that ought to work with the more recent desktops such as Jinnee and Thing.

> Since the schmilblick goes forward, i should be happy. Though feeling a

Indeed, these were some ideas I had, and NAS seemed a nice opportunity to test them a bit.

> And feeling also a bit "deprecated" myself. And i do not know what to do

Feel free to use the patches any way you please. If more ideas comes to mind, I will of course submit them to you. Thanks again for supplying the sources, allowing others to pitch in and help out with the program.

Okay, thank you very much. I will include your patches in the next
official release, keeping yours comments and adding your name/nickname
in the credits in the program info window.

I'll think of some new features, to justify a new release, and verify
under MagiC.

Best regards

Pierre

That is really nice that the Coldfire project is still going. I would love to get my hands on a finished one.

Lee,
 I have an Mega ST2 which sadly only produces green video. I keep meaning to get it fixed, but every time I plan a drive across to Barry at Keychange something crops up. I used to have a "BBDP" hard drive adaptor and their own software. These days I use HD Driver, but to be honest I don't really have time to fiddle with my Ataries :-(
Dave

Hi;

When displaying the contents of a directory, or information about a selection of files to be e.g. copied (in a desktop program or in a file copy program), it is usual to display the total count of "bytes used" in the selection. This number is (almost always?) obtained by summing the "useful" bytes of all relevant files, which can results in numbers of a magnitude of several billions that appear to be accurate down to the last byte.

It might be argued that this is not always the best approach, because each file actually occupies an integer number of clusters on the disk, and a cluster can have a size of several kilobytes. The count of used clusters, multiplied by cluster size in KB, may actually give a more meaningful and easier-readable information about the really occupied space on the disk. It would be a more accurate measure of the effort required to perform a copy (or other similar) opeation and enable easier estimate of wheter free space on the target location is sufficient. Beside that, it would in a simple way avoid the problem of overflowing the 2 GB or 4 GB limit for total byte count that appears when using simple 32-bit integer arithmetic.

On the down side, this approach would be contrary to the "tradition" originating from MS-DOS (or CP/M ?) o displaying the sum of "useful" bytes.

It may be noted that, on large disk volumes with large cluster sizes the difference between summation of "useful" bytes and calculation based on summation of used clusters can be significant.

The proposition therefore is that, when a desktop program displays information about "bytes used" in a directory or "bytes to be copied", the used clusters are to be counted and summary information is expressed in kilobytes (except in very rare cases, cluster sizes appear always to be at least 1KB). Individual file sizes would still be displayed as "useful byte" counts.

Any opinions?

cu;

Mega STe, TT030, Stacy needing new hard drive, and an ST or so, including one with a memory upgrade by JRI (John Russel Industries) personally, and more than one Portfolio.

My problem has been finding drives that do not drag down the machine bus, and make unpredictable things not work. When 4 gig drives were first made, 4 out of 12 worked on any Unix system, including Atari MiNT.

What I have found are marginal. I have bought many, through E-Bay, and scrapped most of them. The ones I kept HDDriver recognizes, formats, but will not partition, since some of the full command set do not work on these drives. So, I use ICD Pro Tools to format and partition, and if for more than four partitions, I add two partitions not enabled, and the fact that the last two partitions are not recognized when one boots into HDDriver has no effect.

This is from a TT030, running MiNT, with an internal 4-gig drive partitioned to C-J with ICD Pro Tools, with two extra not-enabled partitions, (K and L) and a 4-gig external drive partitioned to K and L as LNX partitions with ICD Pro Tools, and all of this boots and runs under HDDriver.

My SCSI bus at the moment has that external MiNT drive, and the newest Phillips IDE DVD and whatever drive on a icd to scsi bridge card.

This is all at the cost of about thirty scsi 4-gig hard drives, which hit the trash, all to get me back to where I was years ago, with all bus slots filled with something useful.

Mega Ste has a 2-gig drive. I do not remember the details, but DISCUS tells me that ICD Pro Tools once partitioned it. It boots from HDDriver 8.20.

Hi;

I have an opinion, and it seems to match. My partitions are 525 meg, so my cluster size is something bigger than 1024 bytes. So, if calculating bytes used or space used, I need probably 16K clusters.

On the other hand, I move what files will move by Kobold by Kobold, and that moves files by actual bytes, to another partition of 16K clusters.

Anyway, the tradition from MS-DOS (which was CP/M with a relocating
loader) no longer is relevant.

I like your idea.

Jim

I wrote long ago an article about this problem in the french ST Magazine.

I used the following formula:

(bytes used) + (number of files)*(cluster size)/2 + (number of folders)*(cluster size)

Estimating that the mean error on each file can be cluster/2. This gives a good approximation of the real used size.

For example, to copy 200 files and 15 folders with a total of 1.000.000 bytes on a partition with cluster size = 4Kb:

1.000.000 + 200*4096/2 + 15*4096 = 1.471.040 bytes.

But that's not exact!

The article can be found at:
http://pagesperso-orange.fr/gtello/downld_f.htm

In the first list, download the file named FICHIERS (13Kb), but the article is in french...!

Guillaume.

> Any opinions?

I don't like this very much, because the size of the FILES is not the same as the space they occupy on a certain partition or filesystem. Your proposition means that the exact same selection of files will be displayed with different size on different partitions - not very logical to me.

Also, if you attempt to copy 10000 files with a total size of 97Mb from a partition with 16kb clusters to a partition with 1Kb clusters and 100Mb free, you're not allowed to do this because your way of calculating the size of the files on the 16kb-cluster partition indicates a total size of 105Mb...

Hello,

How to set, by software (not using a CPX) the serial speed of the TT/MSTE ports to a speed greater than 19200?
For example, I'd like to communicate at 115200 bauds, how can I do it?

Guillaume.

I agree with Jo. There will be ptoblems when copying to partition
with different cluster size, even on floppy from HD...

Probably is best to give both sum - of filelengths and occupied spaces
on partition.

 Mega ST with 4MB upgrade. IDE adapter in expansion slot - there may
attach any IDE drive, CD ROM, Compact Flash cards...  Driver SW is
same as HW - made by me :)  For CD ROM or DVD used MetaDOS.

Well, I've got a Mega ST2, upgraded to 4 megs of RAM, ADSpeed accelerator
(16mhz), TOS v1.04, 4 gig hard drive, with a SCSI CD-Writer, in an
external box. I use it to run DarkForce (my BBS). :)

Rsconf() XBIOS function only supports up to 19200 bauds.

As far as I remember, most high speed serial TSR (like HSmodem) replace the slower speeds (50,75) with high speed ones (115200,230400). But I don't know if you can query the new/real baud rate.

If you really want to set high speed on a serial port, you'll have to resort to call Fcntl() on a serial port device (HSModem provides it for TOS, you have it by default under MiNT).

Hello,

I have read about a beta version of AtariWorks 2.0, anyone has it?

And I have also read about a book "Papa's Grafik Guide to AtariWorks ", anyone willing to sell it?

Guillaume.

Here is the newest version I've found, 1.207

http://atariforce.free.fr/falcapuk.htm

You can substitute the English language files from earlier versions iirc.

Mark

Hi,

According to the Atari Compendium, http://www.fortunecity.com/skyscraper/ap=
ple/308/html/chap4.htm#serial,
"Rsconf() and Iorec() set the communication mode and input/output
buffers of the currently mapped serial port. You should note that
while some ports support transfer rates of greater than 19200 baud,
this is the limit of the Rsconf() call. Other rates must currently be
set in hardware (or with the Fcntl() when MiNT is present)."

Unfortunately how it should be set in hardware is not clear. I guess
next ide would be taking a look at the mint sources to find any clues.

Regards,
George

Thanks, that's the one I have too.

Anyone knows how to print automatically the page number in Atari Works?
For example, I'd like to get at the bottom of every page:
Introduction, page n�#

Guillaume.

    The fact is that I have a very long document created with AW. And
translating it to another soft would be a long job!
    Unless Protext loads directly AW files?...

    Guillaume.

    Thanks a lot!

    I could get it to run under Multitos, but not plain TOS. And again the
french RSC files were not accepted.

    Guillaume.

"Possibly."

I regret I do not now have an Atari to try it out and I'm reluctant to say
it can unless I have tested it.

Anyone else here know?

> I agree with Jo. There will be ptoblems when copying to partition
>with different cluster size, even on floppy from HD...

He had a point here and I accept his argument. As I said, I did not intend
to forbid copying but only to issue a warning, but there is no use in
making that warning because very often it would not be appropriate.

>Probably is best to give both sum - of filelengths and occupied spaces
>on partition.

But the problem appared in the first place because, with increasing
partition sizes, it becomes difficult to give a sum of filelengths.
When a folder (or a partition) content is more than 4 GB one would
have to resort to the extravaganza of 48-bit (or 64-bit?) arithmetics.
When doing calculation based on cluster count the problem would
be deferred at least to capacities of several TB.

>> The proposition therefore is that, when a desktop program displays information about "bytes used" in a directory or "bytes to be copied", the used clusters are to be counted and summary information is expressed in kilobytes
>
>I don't like this very much, because the size of the FILES is not the same as the space they occupy on a certain partition or filesystem. Your proposition means that the exact same selection of files will be displayed with different size on different partitions - not very logical to me.

But, in fact, a certain selection of files -will- occupy different amount of space on different partitions, so the information I propose to present may not appear logical at first sight but would be true.

I would like to mention dat when used space on disk is calculated from information supplied by Dfree() the result is based on the number of used clusters and can differ significantly from the sum of "useful" bytes in all files. This, too, may appear ilogical and, in fact, some users of TeraDesk have reported it as an error.

>Also, if you attempt to copy 10000 files with a total size of 97Mb from a partition with 16kb clusters to a partition with 1Kb clusters and 100Mb free, you're not allowed to do this because your way of calculating the size of the files on the 16kb-cluster partition indicates a total size of 105Mb...

A good point. I did not intent to forbid copying anyway, just to issue a warning- but it seems that the warning would be pointless.

48-bit, or 64-bit atithmetic can be done with 68000. Little slower, of course.

Maybe wiser is to start rounding by so large partitions - no much sense to give exact sum in bytes.

I can imagine (actually I experienced it) how long takes Desktop partition info of some large part. with many files on Atari ST. It may take several minutes...

Ok, so I found LINKS and downloaded it, and unpacked it. It appears that it is useless to me. It cannot cannot handle a color depth of one. Is there a workaround for my problem?

This from a TT030 with a TTM 195 monitor. That is about 96.1 dpi, and a color depth of one. I can get 34 dpi in color, but I have one of those at work.

Jim

Thanks a lot. I'm maintaining <http://eureka.atari.org/atari.html>
including the ATARI Search Engine, and I'm always preoccupied with
broken links when it occurs, not so often thankfully. Because the
ATARI scene is quite international, it's not easy to find your way.

This is really interesting indeed.

Regards,

Bonsoir

Download on my homepage or directly from the folder
http://rajah.atari.org/files/ -> litchi11c_uk.fr (110KB)

New for this FTP client (STinG/STiK2/GlueSTiK):

+ GokMasE's patches (fixes under XaAES environment and AV enhancements)
  - Using the correct app name when signing up with AV_PROTOKOLL
    (Using "LITCHI " instead of "TROLL   ")
  + Dragging files from from REMOTE window to desktop window should work.
    (Involves improved AV-PROTOCOL support)
  + Refreshing the desktops directory window after downloading (AV_PATHUPDATE)
  - Sending Litchi's windows to bottom of window stack should work OK on all
    AES' now.
  + The application name is now correctly reported through MENU_REGISTER now.
  - WM_ARROWED problem under (at least) XaAES has been fixed now.
  + Added check if URL file was written OK to disk, else show an ALERT.
- bugfixes:
  - in the URLs window, alerts corresponds now this the blank text field.
  - also no more need to indicate username/password if anonymous access.
+ informations on a distant folder: numbers are more reliable. Scan is done in
  the remote folder to set correct number of files+subfolders and length of

  datas.

"Merci" to Joakim H�berg and Lars Schmidbauer

Voil�

Monday, July 14th 2008,

the long awaited cracked additional modules for Cubase sequencer are now out! All disk protections have been removed!

- Studio Module : The Total Recall Studio Organizer. Manages the settings for all your synthesizers and other MIDI Devices.
- StyleTrax : The Accompaniment Tool. Make music in seconds with the Styles that are included, or create your own in minutes.
- CueTrax : The Graphic MasterTrack Editor. An essential tool for anyone making music for film or video.

These modules are compatible with Atari versions of:
- Cubase Score
- Cubase Audio (CAFCRACK packages included)
- Later versions of Cubase 3.x (For example, 3.01 is excluded contrary to 3.10)

I advise to put STUDIO.MOD, CUETRAX.MOD and STYLTRAX.MOD files in MODULES folder. Before loading Studio Module, you MUST create a STUDIO.DAT folder in current Cubase program folder.

Studio Module (v1.02 package):
http://jeanpatatari.site.voila.fr/modules.add/STUDIOJP.ZIP

Studio Modules (v1.06a, v1.06c, v1.07a):
http://jeanpatatari.site.voila.fr/modules.add/STUDADJP.ZIP

Studio Module driver editor:
http://jeanpatatari.site.voila.fr/modules.add/DMAKER.ZIP

CueTrax Module:
http://jeanpatatari.site.voila.fr/modules.add/CUETRXJP.ZIP

StyleTrax Module:
http://jeanpatatari.site.voila.fr/modules.add/STYLTXJP.ZIP

Special thanks to JLC!

Jean Pat

Always available CAFCRACK v1 (M) Crack For Cubase Audio Falcon 2.06:

I don't agree. I'm not interested in the pecularities of the filesystem, I
want to know the size of the files. When manipulating/copying/moving files
around, there are two things of interest:

1. The size of the files themselves.
2. The amount of available space on the destination drive/partition.

You can sum the numbers of full clusters used in one 32 bit integer, and
the remainder in another 32 bit integer. Unless you have an awful amount
of very small (i.e. smaller than the size of a cluster) files this should
work with very large collections of files.

But much depends from file count too - lot of short files will occupy much more space on target. So, for exact prediction before starting copy you need to know cluster size of target, and size of each file to copy.

Then, information about how much space is allocated on drive by files, directories may be useful too. Not by copying exactly, but in partition Info certainly. Win XP gives both info: sums and allocated space.

Bonsoir

Download on my homepage or directly from the folder
http://rajah.atari.org/files/ -> litchi11c_de.fr (110KB)

Thanks to Lars Schimdbauer, a German translation of the RSC and BUB files.
(HYP STGuide is still en English, but no one reads the documentations)

Also GokMasE true name is corrected in the archives. Apologizes about the mistake.

```
Voil�.

I have some extra Atari ST items that haven't seen much use lately but that may of interest to someone on this list. All items in good shape and available for nominal cost plus shipping expenses. US addresses only please. E-mail me at lener@vt.edu if interested.

Alice, The Personal Pascal (boxed)
Tackle Box, for use with Personal Pascal (large binder with disks)
Laser DB, debugger for use with Laser C (manual with disks)
Mark Willims C (book with disks)
ST Developer's Kit (3 large binders)
Book, Mastering the 68000 Microprocessor

Other items:
I also have some duplicate cover disks and two large boxes of Atari
related magazines. E-mail with interests and I can send more details.

Greetings everyone!

Here are the lucky winners for June 2008 at The DarkForce! BBS:

June 2008
1. ST Magazine - Leehanken wins the free 3 mag. subscription

2. TOS 2.06 ROMs - Orion_ wins this for his Atari ST!

Congratulations to our winners!

Also, here are July's prizes:

July 2008

1. A complete TOS 2.06 ROM set for your ST, courtesy of Techie_Alison
   (thanks Alison!)

Congratulations to our winners, and good luck to this months callers!

 :)

PS Sorry about being late this month folks, vacation and all that :)

Hi,

I just bought an Apple 3G iPhone, and was wondering whether someone would be interested to port ARAnyM on this small computer hosted with a sort of Mac OS X, and having the power of a machine from year 2000.

There's an open SDK available for it, and I'm not measuring the effort at the moment. So if you have some experience with this kind of embedded developments please give ones opinion, you're welcome.

ARAnyM already runs on my Linux Vaio laptop, on my 1.25GHz G4 MDD and on my PlayStation 3 (Linux). The point is iPhone has a tactile interface.

ATARIstically yours =3D)

Regards,

Personnally Ihave some ideas for use another embbedded proccessor
(Freescale MPC5121e):

http://www.mtcera.com/product/img/05.jpg

there are more Mips by Mhz (Debian Linux).

Good luck!

How strange ! It would be the first time a big-endian configuration
embedding a Coldfire processor would be so called a "Personal Computer".

The 3G iPhone is powered with an ARM processor, and the hosted OS is
a Berkeley Software Distribution Unix, am I wrong ?

Big-endian Unices are coming back again, for everyday life customers.

That's really interesting, indeed.

ATARIstically yours =3D)

Hum.. before Feescale...
MCF was Motorola ColdFire.
MPC was Motorola PowerPC.

The fastest coldfire is always the v4e at 266 MHz (PFU & MMU), 3 or 4
years old now.
Here it's not a fastest PPC, it's an e300 core clocked at 400 MHz, but
it's an SOC (System On Chip) for reduce chips on the motherboard. It's a
tri-core because there are also on the chip an ALE (32 bits core for
audio), and a 3D graphics engine. On the chip because it's a
microcontroller there are also (like the colfire) CAN, ethernet, PSC
(programmable serial controllers), USB, SDRAM DDR controller, DMA, PCI.
But here also on the chip PATA, SATA, S/PDIF, DIU (display interface
unit), etc.. A total of 516 pins on the chip.

Regards,

Didier.

iPhone (3G and first 2G version are same) run iPhone OS which is
cutdown version od Mac OS X. So probably Hatari could be ported to
iPhone o:)

beside iPhone has ARM11 CPU downlocked to ~417MHz from 670MHz, it also
has PowerVR 3D chip, support core animation in Mac OS X....

so is it possible to make e.g. Hatari to run on iPhone??

Hi Didier,
```

Didier M=E9quignon wrote :
> MCF was Motorola ColdFire.
> MPC was Motorola PowerPC.

I was making a confusion between those two kind of CPU references.

So, Freescale is designing PowerPCs, while IBM rather promote Cells.

That's interesting. So you're interested in PPC CPUs though Apple switched to Intel, and no major informatics companies are still now ?

May we wish one day ATARI will propose their own hardware again ;-)

Best regards,

Heres your excuse to buy Books for your Atari! Classic Atari 8 Bit & Atari
ST for 20% off in this Back 2 School Atari Book Sale!

I have Boxes and Boxes of Atari Books for Sale! Some I have Lots of and
some I have 1 or 2 left!I have more Atari Books than anywhere else. Atari,
one of the most well documented Computers ever! I have them Both for 8 Bit
& ST! Some you wont find anywhere else but here! On sale, all my Atari
Books, 20% off. E-Mail Atari@aracnet.com or call Ben 24/7 @(503)256-9974!

http://BensCatalogs.Atari.org   DOWNLOAD FREE ATARI CATALOGS!
http://www.aracnet.com/~atari/8btbooks.htm 20% OFF ALL ATARI 8BIT BOOKS!

```
http://www.aracnet.com/~atari/stbooks.htm   20% OFF ALL ATARI ST BOOKS!
http://www.aracnet.com/~atari/specials.htm  ALL ABOUT CURRENT ATARI SALES!
```

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

You're not clear: what refuses to install the stuff? The Easymint
installer?

>> However, nothing prevents you from installing the rest of the system

Once again you're not very clear: what system (What OS)? TOS won't show
you Q: because Q: does not exist for it. On the other hand, MiNT will
show you Q: but then, it means that MiNT is already installed.

That's it. :-(
So, is there any way to install the stuff on partition L:\ and then,
when running MiNT, tranfer it on Q:\, then make it know it has to
look for it on Q:\ and not on L:\ anymore?

Okay. If you want to install the MINT folder on C: and the Unix partition on Q:, then yes, I can't see why you wouldn't be able to install the Unix folder first on L: then, when everything is running fine, move the content of L: on Q: and modify the links in MINT.CNF. As long as both L: and Q: are set to LNX and the copy is done properly this should pose no problem at all.

Hope this is clear now :-)

Cheers,
JFL

I tried to copy from L:\ to Q:\, unfortunately Kobold seems to have
problems, as it stated some files were duplicate, though they are in
distinct folders. :-/
I found that there are folders with same name but different case too,

```
particularily in usr/share/terminfo where we can find folders nammed
"a", "e", "l", "n", "p", "q", "x" and the same ones but in uppercase.
Any idea ?

Regards,

J.-Luc

We don't speak about an emulator, so far as I understand the aim.

"
ARAnyM is an acronym : Atari Running on Any Machine. It is a virtual
machine software for running the Atari ST/TT/Falcon operating systems
(TOS, FreeMiNT, MagiC and others) and TOS/GEM applications on any kind
of hardware - be it an IBM clone (read it as "PC" :-), an Apple, an Unix
server, a graphics workstation or even a portable computer.
"

<http://aranym.org/>

This isn't excluding the iPhone, supporting all kind of softwares.

ATARIstically yours =3D)

Wow. Stop right there. Don't expect Kobold to handle ext2 filesystems.
That's what I meant by performing the copy properly. Use the shell with
the command "cp -au /l/* /q" so that symbolic links are correctly
recreated. TeraDesk or Thing may also be able to handle this finely but
I personally wouldn't bother.

> Any idea ?

ext2 filesystems are case sensitive so "a" and "A" aren't the same file.

Cheers,
JFL

Don't use Kobold. Unless it's been updated since I used it about 8 years
ago, it doesn't understand the access flags correctly and also has
problems with symbolic links. Use cp or tar instead.

> I found that there are folders with same name but different case too,

This is correct. Perhaps Kobold isn't case sensitive?

My TT (and maybe soon my MSTE) has a SCSI->IDE interface, on which a
CF IDE adapter is plugged in, and a 2GB CF card is attached. Works

```

OK, I finally found that when all seems to go wrong, it's best restarting from scratch and follow each step so closely so possible.
So, I repartitionned my HD, copyed the necessary stuff to boot from (this means all MagiC!) and install from - that is : EasyMiNT packages -.
Then I booted from MagiC! and started EasyMiNT, which started doing its job. But then, it seemed to stop at the point where it displays "Copying AUTO folder". After more than 30 minutes, nothing had changed, and I was going to turn the computer off, when I rememberred that it did it either the first time I tried to install it, about 3 monthes ago. I rememberred too that I had to strike the "Esc" key to go further, which I did. The HD led lit, then stopped. Then I stroke Esc 2 more times, and it displayed "Sorting AUTO folder", then I had to strike "Esc" 2 more times and it went on the screen where it displays it must reboot, aso.
The new installer seems to set up correctly the netware data, but I copied the ones I had saved from my previous install, thus being sure it would work straight after. ;-)
So, no more need to copy from l: to r: and then modify config files. Just install and copy 8 (or, at least, 2) files, and all runs fine. :-)
Forget Kobold problems with following some links. :-/
Just a minor problem with a partition, but this will be asked in another post... ;-)

Thanks to both,

J.-Luc

OK, now I have MiNT running from r:\. :-)
When preparing my disk, I set a partition with 4094 kB. It is for
very large data that I will not have to access under plain TOS, so
it is Q:\ - just before the lnx one ;-) -.
I tested it under MagiC!, which let me copy/retrieve data to/from
it with no problem.
But MiNT seems not to like it, stating something about fat being
too small, and this is reported when trying to access the drive
too (I use Thing as a desktop).
There are 2 alertboxes displayed then :
- for Thing, "No information available about drive Q:! (TOS -46)"
- for XaAES , "pid 104 (thing): FATFS (Q): FAT too small (FAT
  size = 8174, minfat = 8175)"
I tried to change the value of cache into mint.cnf from 4096 to
6144, then to 8192, but it didn't help. :-(
What might I have done wrong ?

Regards,

J.-Luc

What type is the partition? If you just want the data to be accessible
only by mint, you should go for ext2. For MagiC/Mint I guess F32
should work, but I never tried it.

 J. Luc , you should give more datas here.
Not to mention that 4094kB is too small for anything :-)
I assume that it is 4GB. Is it FAT32? With what SW you created that
partition?

Very likely, not the size of partition is the problem, but parameters
of it.

As I tested Mint works well with FAT32 partitions up to 16GB, even
32GB , depending on sluster sizes.

Well, I use HD-Driver in its latest release - 8.22- from Uwe Seimet,
and it is a f32 partition.
But what do you mean by parameters of partition being the problem ?
HD-Driver manages all by itself, just tell it the size and type of
the partition you want to create
What puzzles me is that MagiC! can read it correctly, but not MiNT.

If he even uses a computer at all, he probably uses a Mac. Wonder if he
ever actually used an ST/e/Mega/TT/Falcon?

My ATARI STs have been dormant for many, many years. I turn them on
every once in a while just to see if they still work (they do!). Now my
wife asks me how can she have a small setup in her office at school to
record a few MIDI tracks and playback through her keyboard.

She was talking about buying a MIDI interface for the Windows PC they
gave her and some sequencing software. Now, we are really Macintosh
people here and I just know that she would keep calling me all day long
with questions about why this doesn't work or that.

Then I remembered that I used to use Dr. T's 'Tiger' to record. And since the ST has a MIDI interface built-in it would be easy to setup. I went searching for the Tiger original floppy - which I actually found. It works fine. And I can launch Tiger from the hard disk, too, as long as the original floppy is in drive A. The problem is, I would rather not give my wife the original floppy because after such a long time it might just go flop!

Since I have not worked on an ST in about a decade I am not in the picture anymore how to cope with this situation. It would be a great opportunity to put that good old ST back in business.

Thanks

Peter

If you go to the console and try commands like "ls", does it work?
"df" would be a good idea too. If those work then it might be the
desktop's fault and not the OS'.

Good luck

Well, I remembered that ST Format had put Tiger and Omega on one of
their coverdisks. Have a look here: http://stos.atari.st/stf.htm,
download the disk with a greek omega and try it out, maybe it doesn't
have protection (because I assume that this is the issue here).

As I know we need to init FAT32 partitions after partitioning with Hddrutil, before using with Mint. There is mkfs util for that. I did not test latest V., 8.22, but no reason to think that FAT32 init is changed.

FAT32 partitions may have diverse parameters as cluster sizes, reserved sector count, number of bootsectors, some IDs, etc... As I see, Mint32 works well with partitions created with Windows. Myself made partitioner which can init FAT32 parts., but their format is taken from sample FAT32 partitions made with WinXP. As authors of Magic and Uwe Seimet worked tight together it is normal that Magic and Hddriver understand each good. Btw. Uwe said that he even did not test latest hddriver with Mint.

So, you need mkfs for Atari.

Oooooooops! As it was accessable under MagiC!, I thought it would
be under MiNT as well. :-/
A little "mkfatfs Q:" made it MiNT readable.

This might explain that. ;-)
Thanks for the tip,

J.-Luc

His sons were computer savvy and undoubtably used them.

FWIW: A president/CEO using a computer in the 1980s would have been considered something like handing George Bush a shovel to fix New Orleans.<Not that it isn't a reasonable idea but for punitive value>

The computer tasks available like word processing or spreadsheets would have been considered a waste of a CEO's time. That is what they have minions for; secretaries, bean counters, that kind of thing. Least we forget, there were Atari PCs so there is a good chance they were in play as opposed to STs.

CEOs only look at distilled data if they are doing their job. Balance sheets vs. individual accounts or paychecks.

Rick

Hello,

Is it possible to extract files from an ST or MSA image without
having to restore it onto a floppy ?
Are there tools allowing that ?

Regards,

J.-Luc

  Yes.    http://www.ppest.org/atari/floimgd.php

 Or may do it with Steem emulator. There are even some programs for
Ataris. But it is for hard disk users.

Good point. I forget that things like the WWW and email weren't a part of the corporate head's arsenal of business tools back then. I'm sure corporate heads use computers for more than communication (email) now though.

Thanks

I'll check that out. I believe the copy protection is the reason I don't
have a safety copy of the Tiger disk.

In the meantime I also found my original disk of Cubase lite - manual
and everything. This one I have copies of. And it runs fine. Except:
It bombs on my MEGA STe (Tos 2.0).
It works fine on my 1040 (Tos 2.05)
Even works under Nostalgia 1.4 on my Mac (ok, I haven't tried the MIDI
part, but it doesn't bomb. I tried that under TOS 1.62 & TOS 2.05.
DIdn't have a TOS image of 2.0 to test that.

Any thoughts? The MEGA STe would be better for the setup.

Thanks

Peter

Any idea what the difference might be between a partition initialized by
MiNT and the partition created by HDDRUTIL?
This is the first time I hear that MiNT needs a special treatment for
FAT32 partitions.

Maybe it's a cache issue. Try turning it off (on 16mhz) or forcing 8mhz.

I really don't know.
I thought that either setting the partition a&s F32 while creating
it or converting it as F32 afterwards would make it readable for
MiNT, but unfortunately not. I had to convert it using the right
command under MiNT.
Maybe might I make 2 partitions on a spare drive, one just created
as F32 and the second converted under MiNT, then save the MBR, FAT
and DIR entries into a file and send it to you ?
Unless someone near you can create the partitions and bring you the
drive so you can explore it ?

Regards,

J.-Luc

Thanks

Figured it out. Man, it's been sooo long. Atari is so hands-on! Cubase Lite doesn't like Universal Item Selector 3.

Peter

Yes I remember Tiger and Tiger Cub. I have both and they are great MIDI programs. I have used them with my old MT-32 MIDI module. They both workgreat with it. Too bad no Atari MIDI programs that are still supported. The last one that I know of that was, was Sweet 16 which I also own. Sweet 16 may still be suported, it is just I have not been to their website in a while. I bought it about 3-4 years ago. Nice program.

Hello all,

I finally received my CT63 upgrade for my FalconI will soon start the long task of putting my upgrade Falcon motherboard in my older Hades tower. Extending most of the ports should be no problem as I have most of the stuff I need to do this. There is one thing I can think of that I need some advice. I bought an Effiel (sp) interface. I need something plastic to attach it to and then be able to attach it to the back of the tower. Anyone know of anything I can use?

Total Commander ? Isn't that PeeCee stuff ?
Anyway, JayMSA suits my needs well. Thanks to Adam who pointed
me to the link.

Hello,

I'm currently doing some testings, which need that I can use lfn
straight from TOS.
This is only possible running a small utility nammed BigDos. Or,
should I write, it ought to be possible.
Because the utility needs to be configured using another samll
utility nammed Setter, from HS-Modem package - yes, I know, that's
all remind everyone here very old memories ;-) -.
The only problem is that all versions of setter I tried report

the file being dammaged or needing the use of a newer version of
Setter. :-(
The ugly thing is, that there is no newer version of setter than
the one I found on the net - and that I already owned anyway -.
Any idea about this ?

Regards,

J.-Luc

OK, I own another utility nammed Setter.PRG (not TTP!).
When I used it first, I saw what I thought to be garbage. In fact,
I just realized it actually displays the same strings as the TTP
version, but with no CR - that is, the CRs are displayed as part
of the string, as characters -.
Now, when I open BigDos and then double click on the first line,
it opens a window with 3 x 4 fields.
What I don't understand, as it is to set up drives type, and as
the accepted values are stated to be from -32768 to 32767 though
there can only be 4 drives types (0 to 3), is how I must fill the
fields.
Must I name the drive and then assign it a type, typing something
like "D=1", "F=3", etc. Or must I assume that the first field is
for the first drive and so on ?

It would be good if you write little more relevant details. For
instance what exactly want to do with BigDOS...

I worked a lot with BigDOS, and never needed Setter. But user must
know what are the limits of BigDOS, FAT16 filesystem and TOS.

Btw. I tried to contact Reiner Seitel to ask him some things about
BigDOS and Setter, but it is impossible.
Nobody knows his working e-mail or where is he... And I'm afraid that
nobody other will tell you about setings. But maybe you don't need it
at all...

I need to access and modify many files with a software that only runs
under plain TOS.

Those are lfn, with names that beginning is the same.
They represent about 3 GB total space for about 13000 files in
something like 1700 folders and subfolders.
If I edit them under TOS, their names are truncated when saving.
One solution would be to rename them under MagiC!, then edit them
under TOS, and them rename them again under MagiC!.
This would need to transfer some files to a partition that TOS can
handle, then edit, and so on... it would take me ages before I have
achieved tenth of the job. And that can't be automated, because it's
highly "human-brain-dependant". :-(

> I worked a lot with BigDOS, and never needed Setter. But user must
> know what are the limits of BigDOS, FAT16 filesystem and TOS.

From what I understood, if I let it as-is, BigDos will set all the
partitions to GEMDOS type, and my need is to access one 4 GB lfn
partition, which I think must be ISO-something.
Last time I tried to use BigDos - loooong time ago -, it corrupted
my entire disk. :-(I think, now, that was because it wasn't set up
correctly. I don't want it to happen once again. :-8

> Btw. I tried to contact Reiner Seitel to ask him some things about

Hello,

I hope this issue will be the last one...
I use a PC keyboard via Eiffel on my FalCT60.
Under MiNT, despites KeyEdit with which I created the Keyboard.tbl
that I placed in c:/mint/1-16-cur/, it just behaves as a plain
Falcon keyboard for Alt-chars, so I can't access them the way I used
before (when I ran MagiC!). :-(
Any idea what I should do to correct this ?

Regards,

not really an answer to your question but:
(Free)MiNT has evolved a lot since then. I don't think there is much on
that CD that hasn't been surpassed by better and newer versions ?

If you mean background images in windows, you need version 1.29beta,
available only, officially, from the Author, and only in German.

The problem I ran into is with the IDE hard drive.
I had a old Factory IDE here, that I put in a Falcon.
It was working when it was stored.
Now, when installed the Falcon will not see it unless
I have a HD Driver Boot Disk.
(Displays the IDE make but will not boot the drive)
I have tried using AHDI.PRG in Auto Folder on a
Disk. Which helped get it started when I switched
Memory boards. As Boot up is Faster with a 4meg
board. Unless you hit space bar.
But it still will not see the partitions.
With this drive installed, it causes the disk drive
not to work. I'll get a message that data on the
disk is damaged for any disk I try to read.
And it will not boot from Floppy, with this drive
installed!
If I remove the ribbon cable from the IDE, then
It will boot from Floppy.
I tried current versions of HD Driver to try getting it
going.
Well after much work, I did get it working. then, shut it
down and re-booted (cold) several times. Worked fine.
Left it alone for 2 days and same problem returned.

The IDE HD is probably Bad, unless there is something in
NVRAM thats gotten screwed up.
The IDE HD is rather old, I'm not worried about losing it.
But does raise concerns with these older ide drives that
are around.
I'd like to know for sure, that's its the IDE hard drive
and not something in NVRAM.

Does the NVRAM have anything to do with the Falcon seeing the IDE?

And doesn't the Falcon suppose to check the IDE before
looking at SCSI?

It seems that the Falcon is looking at SCSI first, then IDE
which I think is wrong if you are booting from an IDE.

Have a question, When the Falcon Boots up, does it suppose
to display a message showing the Falcon's ID number?

Or does this depend on what type of Driver Software
that you are using?

I know that normally you get a message displaying type of
IDE/SCSI.

No. Detection is written in stone.

yes, always.

>
> It seems that the Falcon is looking at SCSI first, then IDE
> which I think is wrong if you are booting from an IDE.

It shouldn't be. The only way you can do that is with a boot floppy
where the boot sector forces it the other way round.

>
> Have a question, When the Falcon Boots up, does it suppose

No.

A little yes.
>

not on a stock Falcon. My CT2 does. But that's because of the firmware.

I'm guessing you may have stiction on the old drive. Its a condition
where it doesn't get out of bed quickly enough for the system to
recognise it, tho it improves if the drive has already spun up. There is
a floppy you could create with a boot delay that gives the drive a
second or two longer to boot allowing the system time to detect it. I
can't remember what it was called tho.

Mark

Or Barry could just leave the 14 meg RAM board in, and not hit the space
key to bypass the memory check at startup. See if that gives the older
drive enough time to "spin up". Not really helpful, but might show if
stiction really is the problem or not... :)

Hello,

I have two Atari TT Ram boards, one with 4Mb and the other with 16Mb.
I noticed that they share the same square IC C300869-001A. So I'm wondering
if the 4Mb one can be upgraded to a 16Mb by changing the SIMMs
(you can say: just do it and you'll know... but they are soldered! and it's
too long a work if the answer is NO).
The 4Mb has number CA400312 and only three jumpers W,W2,W3.

Guillaume.

I had the exact same thing happen to me. I thought the 16meg
board was bad, but installed it later after I had used the 4meg
board and it worked fine.

Hello,

With the acquisition of a new floppy drive I decided to try and get my Mega Ste up and running. I was wondering what the jumper settings should be on the mother board connector for the Atari hard dish controller when the controller is removed? Are there any other dip switches on the mother board that must be flipped when the controller is removed?. I want to use my ICD Link II in its place. All of this was because I thought the controller might have been at the origin of some of my problems with getting the hard disk to work properly. However, when I opened the case a red resistor pack (at least that's what I am calling it) fell out. It has 8 pins with a shiny red housing that covers them across the top. There are other similar ones on the mother board. The questions is did it fall out of the mother board from somewhere or was it a leftover during fabrication? Are there any schematics of the Mega Ste that might tell me where it might have come from or where they should be? Google turned up some references but nothing concrete. It could be at the origin of all my problems. The last series of numbers on the resistor are 311J213.

Thanks

Alyre

One thing to note if this is a standard 3.5 inch drive (especially 7200 rpm). It may be necessary to remove a 1/4 of an inch or so from the ribbon cable just before the drive on pin #1. That would be the wire that has a red line down it. What does this do??? Most newer IDE drives do not like to wait for the signal from the falcon to boot. The Falcon just does not have as much BIOS crap to go through which makes it faster at starting the boot process. If the drive is not spun up first then the computer turned on then it wont boot. If the drive is hooked to an external power supply not used by the Falcon remove a small piece of wire from pin #1 and it will spin up and you can start the falcon normally without issue. This is the way I have to boot my CT60'ed Falcon and been doing it for 5+ years now with the same hard drive with NO issues.

Thanks,
Falcon060

hi,

yes it seem possible to upgrade this board.
Martin-�ric Racine web page wasn't online anymore but I put a
backup of this page here
< http://the.protos.free.fr/TT030/tt-ram.htm >

S.K.22.05.2008."P�lytt�jien t�yskato uhkaa vied� kes�n marjat. Omenapuut ja
herukat kukkivat monin paikoin jo t�ysill�, mutta puutarhoissa on hiljaista.
P�lytt�ji� ei ole liikkeell�. S��n l�mpeneminenk��n ei lupaa helpotusta,
sill� luonnonvaraisten p�lytt�jien kannat ovat romahtaneet l�hes
OLEMATTOMIIN! vaarassa ovat my�s mets�marjat, siel� esim. mustikan, puolukan
ja vadelman p�lytys on l�hes yksinomaan kimalaisten varassa.

Mehil�istenhoidonneuvoja Ari Sepp�l� on kartoittanut p�lytt�jien tilannetta
koko Suomessa. Uutiset ovat olleet yksinomaan HUONOJA! -arvioisin, ett�
kimalaisia ja ampiaisia on nyt korkeintaan KYMMENESOSA normaalista tasosta.
Tutulla omenanviljelij�ll� on tarhassaan tuhat kukivaa puuta. H�n ei ole
n�hnyt t�n� kev��n� ensimm�ist�k��n kimalaista. Kimalaiset ja ampiaiset
katosivat yll�tt�en Suomesta viime kes�m�. Syyt� katoon ei tiedet�. Sepp�l�
ei usko tilanteen korjaantuvan edes seuraavana kes�n�!"

Niin TUSKIN tarvitsee jatkaa? Poriin on yl�tuuleen matkaa TVO:lle jo yli
50km. Ja kuten todettiin 90% katoaluetta aina kukkak�rp�si� my�ten on aivan
hurjaa. (Huvittavinta, ett� kyseiselle kaverille l�hetin vain parisen viikoa
sitten tiedot ydinaavikoitumisfaktasta, ja KAS oivalteli! Ei sanan sanaa
siit�, ettei Suomella olisi mehil�isist� ongelmia. Kiitokset Ari n�in netin
kautta, oikeesti! no toisaalta kaverin netit kuulema turpoavat kiukkuisen
kent�n kommentteja aiemmasta virhetiedotuksista! Taisi ryhm�kuri olla
mukana.))) .. Ydinvoimalan p��st�t tappaa siis todetusti jo kautta Suomen!
Joten H�VETK�� muuta t��ll� aiemmin ved�telleet!

Vaikka t��ll� yritet��n pajunk�ytt�� ties mit� "varmaa"
virus,punkki,bakteri,mit�lie tekaisua" toteenn�ytetyksi niin Sepp�l� kuittaa
t�llaiset luulot jopa yll�tt�en ilmoittamalla, ettei syist� ole hajuja!
Porissa vain muutamasta talvipes�st� on jokusia punkkeja l�ytynmyt ja
mehil�iskato on edelleen mysteeri. Niin.. .? Tai oikeammin tarkoittaa sit�,
ett� YKSIK��N julkisuuden tautipelleilyharhautus ei vakuuta ket��n! Eli j��
j�ljelle j�lleen keran VAIN ne joista kuiskitaan ovien takana.
Ydinionisaation aiheuttama suunnistuseksymiselle j�lleen tutusti pojot!
Sanoi ydinklingonit mit� lyst��! Outoa kapinointia kent�lt�, jopa musta,
ettei jotain ole tekaistu syyksi klassisista huijauksista, vaikka ydinala on
parisen vuotta puukottanut? Lieneek� vaan niin, ettei valheet
mehil�iskasvattajiin en�� uoppoa, kun netiss� puhelevat tiet�v�mm�t syyksi
ydinavikoitumisia, ja beetasoihtup��st�j�?)

Alan arvostuksesta kertoo varsin suoraan se miten alan ammattity�v�est� suhtautuu tekemiseens�. Siit� voidaan ottaa esimerkkej� laajasti. Ammattilaiset haluavat usein my�s j�lkikasvustaan ty�ns� jatkajia. Yritysmaailma on pullollaan ty�st� ylpeit� is�lt� pojalle siirretty� sukuosaamista. Mutta yksi ala loistaa poissaolollaan. Yksik��n ydinalan ammattilainen ei kehu firmaansa julkisesti netiss�, lehdiss�, ei edes asiaa kyselev�lle lapselleen. Jos katsomme ketk� julkisuudessa ydinlobbailevat, niin yht��n alan ammattilaista ei taatusti n�y lehtiotsikoissa, netiss� saati mualla. Vain rahalla ostettavia politikkoja ja vastaavia, jotka eiv�t erota uraania hiilimustasta taatusti.

Rupesin todella ihmettelem��n miksi. Ja ennenkaikkea KETK� ovat maassamme nyky��n ydinalan ammattilaisia? Heit� on maassamme tietysti tuhansittain, mutta keit�? Heille on yhteinen piirre se, ettei n�ill� ole esim. perustuslakiemme mukaista lakko-oikeutta, kell��n! Toinen keskeinen piirre on niinik�� lainvastaiset ylipitk�t jopa 12h ty�vuorot ja loputtomat ylity�jaksot vailla omaa p��t�nt�oikeutta. Kolmas ominaisuus on tekem�ns� ty�n arkaluontoisuus, mik� tarkoittaa orjallista vaitiololupauspakotetta uhkailu-ukaaseineen ydinjohdolta. Esim. OL-1,OL-2 ja OL-3 ty�mailla ei KET��N saa menn� vapaasti jututtamaan tekemisist��n ja m��r�ys on ehdoton, vaikka maamme pit�isi olla demokratia. Mik� kertoo my�s alan valonarkuudesta ja h�m�ryydest� enemm�n kuin paljon.

Niinik�� ydinty�l�isten palkkataso on enmemm�n kuin romahtanut loistonsa p�ivist�. Jos lasketaan Suomen ydinty�l�isten ansiotasot saadaan tyyty� jopa 7 euron tuntipalkkoihin! Reippaasti alle jopa siivoojaminimist� puhutaan ydinalan ammattilaisistamme keskim��rin kautta maamme! Kun viel� 70-luvulla ydinosaaja oli huippupalkkalainen ja arvostettu, on h�n t�n��n l�hinn� kansan hyljeksim� reppupuolalainen, liettualaisorja, turkkilainen, yms. joita katsotaan pitkin nen�nvartta, jopa kaupan kassalla, koska heit� arvotetaan toki my�s olemattoman orjapalkkaostovopimansa mukaan olemattomuuksiin. Ja tieto siit�, ett� suurin osa ei maksa edes veroja,

saati sotuja ja vastaavia alentaa tasoa mutasarjaan kansan silmin.

Vaarallisesta ty�st� johtuvat moninkymmenkertaiset sairastumisriskit ty�tapaturmista, kielitaidottomuutensa takia tulee valtavasti onnettomuuslis�riskej�, samoin kouluttautumattomuuksistaan, s�teilyst� ja vastaavista lis�riskeist� kiistatta puhutaan ydinty�l�isiss�. Hyv�ll� ei n�ihin pitk�lti "slummiparakeissaan "huuhaileviin" ydinorjin suhtauduta en�� edes harmistuneitten kauppiaitten piiriss�. S�teilyvaaransa takia heill� on normaality�l�isi� ankarammat l��k�rintarkastusvaateet jne. Ydinty�l�iselle on kauhistus , jos lapsensa tulisivat samaan ty�h�n jatkajiksi.Voi vaan h�mm�stell� kuinka nopeasti ydinalan mega-arvostus on romahtanut nykyiseen mit��nsanomattomuuteensa. heijastellen sit� pettymyst� mit� ydinvoiman loisteliaitten lupausten romahdettua tshernobyliin on tuottanut. Voi vaan arvailla, ett� kuinkan n�in totaalisen pettymyksen ala saa en�� jatkossa KET��N kiinostumaan sen yll�pidosta?

Ian and Mark Baker have very kindly released the source code to their Family Tree application.

The source can be found at www.atari-family-tree.org.uk
and look in the 'Source' folder.

If you prefer CVS then

```
export CVSROOT=:pserver:anonymous@cvs.atari-family-tree.org.uk:/var/lib/cvs
cvs login
(hit return, no password required)
```

cvs get famtree

I hope people can make good use of this.

Peter

If you want to install rpm without a shell then have a look
for RPMtool by Marc-Anton Kehr.

You will still need to have a Mint filesystem though.

When I first upgraded my basic Mint install to use a Mint filesystem
I was put off by the rpm system but now I just try to ignore the
scary installation wizard aspect of letting something install stuff
for me.

I replaced my old EasyMint install with a complete new one last year and had the same problem. The files in u:\opt\toswin2\ should have the execute privilege. You can change it from Thing file Info.

This happens to me a lot when installing new software from a zip file
in ext2 partitions, i must set execute rights manually. I thought that
it happened because it was zipped in a NON ext2 partition and there
were no rights in the files, so they were set in my computer by
default with no execute attributes.

> >Make sure, you have execute right both on  "u:\opt
> >\toswin2\toswin2.prg" and "u:\opt\toswin2\tw-call.prg". Easymint
> >installs them without granting execute rights.

Mega STE schematic can DL here:

http://dev-docs.atariforge.org/

There you may find purposes of DIP Swithes (it's called so) in
machine.
I know only from memory that switch pos 7 is for activating high
density floppy mode - in case that you replaced your original one (for
instance EPSON SMD 380 was in mine, SD) with some HD floppy.

IIRC it only activates HD-mode in the desktop floppy formatter. HD-mode is
handled automatically.

Yes that's right. There was a auto folder program that used to assign the correct cookie too. For those with HD and no MegaSTE;-)

Hi,

Anyone knows the max speed of the LAN ports on TT and Mega STE ?

```
Any network software made?

Guillaume.

230k baud.

> Any network software made?

Nothing specific for the LAN-ports AFAIK. They're just ordinary
serial-ports (RS-422 I think), so you can run TCP/IP over SLIP or PPP like
on the normal serial port.

    Hello,

    Someone reported that OXO systems made "ITOS Lan". How is made the
connection? (direct link?) and any idea of where to find that software?

    Guillaume.

I have found DUETLANT for the TT, I can't get it to run...

I have on both TT:
- DUETLANT.PRG
- then DUETCONF.PRG & DUETCON.INF in the auto folder

DUETCONF.INF has:
SPEED 19200 (not too ambitious)
TIMEOUT 5 (cool, no hurry)
STATE 0 (read only)

And one of them has this line:
DRIVE N F (locally virtual drive N will be connected to distant existing drive F)

The boot is Ok, then when I try to reach drive N, 5 seconds after I get a message saying that data may be corrupted on drive N. But it exists!

Guillaume.

I found the program on http://www.umich.edu/~archive/atari/Network/Local/
and I'l give it a go when I get home - at work atm. Do I need a
special cable for the lan port? (I can't remember its shape atm)

    That's where I got it!
    I used the cable found between a MacIIsi and its printer. Is it the good
one? Don't know...

    Well if you can make a network even with another serial port (I have a
Modem 1 connection) with Duet, I'd like to know your settings.
    Does SERIAL.CPX interfere?
```

I tried with and without it, no change...

Guillaume.

That's not correct. With switch 7 at original pos. my machine
couldn't read HD floppies. When I moved it, then it started to read
HD, and formatting in HD as option appeared too.
Of course that HD is handled automatically, otherwise it wouldnt read
DD floppies. Under activating I meant not momentaly mode, but support
for HD mode...

I've had 3 MegaSTE's and they all behaved the same. I could format 1.44's with the switch off, but not from the desktop menu. The switch enables a cookie for TOS. It flags the drive basically. There is an auto folder cookie app that simulates the same thing for non MegaSTE/TT/Falcon owners.

What version of TOS were you using? I have only really tried with 2.06. I had a 2.05 Mega but upgraded it before I even used it. Also installed TOS 2.06 rom's in STE's and STFM's as well as a couple of HDD upgrades. Always the same. Step rate was really the only issue.

Mark

My Mega STE behaved exactly like yours. It was a rather early MSTE with a
standard DD floppy. When the floppy died I replaced it with a Sony
HD-drive. It worked fine without touching the dip-switch at all.

I used Links to access my office webmail system today. I can't get in with Highwire due to ssl and js.

It works but the layout is poor with some scetions missing.
It shows the list of emails but doesn't show the mail content.

I suspect that the lack of CSS support is the biggest problem.
Highwire has quite advanced CSS rendering.

As a user I have to ask which is easiest, adding CSS into Links or adding JS and SSL into Highwire ?

Well, I checked it again yesterday... (I don't use much floppies on it, there is hard disk of course). It worked not at all with HD floppies. So, I replaced drive and it worked. Then I checked problematic floppy (TEAC) and saw that HD sensor is little moved, and diskette with HD hole still pushes it down. I bend it with small screwdriver, so it is now OK.
And yes, switch pos 7 is only for extra format option.
It looks that when I put in TEAC (about year ago) it just had similar HD detection problem, and after moving DIP switch 7 it just happened that HD sensor switch worked good...
I have TOS 2.06 . It is some early Mega STE, was 2.05 in, but I replaced it immediately.

Yeah, step rate is solved very primitive, and with DD floppies we have horrible sounds - especially TEAC has loud one.
I patched TOS 2.06 earlier, and set there steprates to 3 mS, used some little proggies or bootsector of floppies to set 6 mS for HD diks. It was for 520ST with added simple circuit for supporting HD floppies. Of course, it offered not HD format from Desktop, because was no port and microswitches.

Btw. I solved steprate problem in STE with special HW adapter - it switches back FDC clock to 8MHz while stepping - done with monostable.
So, no SW fixing is required.

PP

Does your MSTE have a 1772-02-02 or an Ajax floppy controller? My had a
02-02 and HD did work fine. I'm just curious whether the Ajax solves the
step-rate-problem more elegantly than the 1772.

Hello,

Today, I tried DUET also, with 3 computers.

- between TT <-> MSTe 1
- between TT <-> MSTe 2
- between MSTe 2 <-> MSTe 1

Without success.
I used two different cables.

I disabled my normal AUTO folder, and booted the machine with minimum requirement.
I got drive N (mapped to drive C on both machines), but couldn't open the folder.

Mayby someone has more luck ?

In the near future, I'll try it again with sting, and bnet.

Kind regards,

Mark

It has Ajax. But that chip is nothing better considering steprate.
It is just guaranteed good for HD floppies and maybe for ED ones
(never saw such). In other words, it can reliabely work at 16 MHz or
even 32 MHz (for ED). But dumb FDC never knows with what MHz is
clocked, so steprate should be solved by OS. Atari could solve it with
little effort - just setting steprate according to what floppy is
inserted and/or at what clock FDC runs. Maybe it would require
additional bit on some port, don't know.

Thanks, so you get the same as I got.
If you have some other software to try...

Guillaume.

I've connected ethernec's to my falcons (2x) , and netusbee on my TT.
Under mint, I use mintnet and bnet for mint.
Under magic, I use sting and bnet for sting.
With bnet I've graphically access to the other computer. The other
computers are located on a 'p'-drive.
I can copy over the network, just by drag and drop, from one to
another window.
Bnet is for me a great piece of software. I like it a lot.
Unhappily, it don't work with samba drives.
For that I use Sharity-light (under mint, or under magic).
You must always use the command line for establishing a network
connection. Writing a startup script  would be  a good idea :)

Mark

Greetings everyone!

Here is the lucky winner for May 2008 at The DarkForce! BBS:

June 2008
1. ST Magazine - Doc Clu wins the free 3 mag. subscription

Congratulations to our winner!

Also, here are July's prizes:

July 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine subscription.

2. A complete TOS 2.06 ROM set for your ST, courtesy of Techie_Alison
(thanks Alison!)

Congratulations to our winner, and good luck to this months callers!

:)

Could someone kindly explain how to untar and compile this using plain
TOS? Although I understand the issues from my Linux days, I don't
have any Linux computers running right now, so instructions, or a
zipped binary would be most helpful.

Hi,

If you bought this MSTE new, it's strange that one of these would just
fall out.
The MSTE has these on the MB as you have already mentioned.
If you happen to have ST Format Issue 38, Sept. 1992, you will
find some color pics of the MSTE motherboard which may help
locate where this goes.
The MSTE HD Controller also has one or more of these IIRC.

BTW, are you sure this Red Resistor is 8 pins and not 9?

Also, it could have came from the internal Hard drive.
Not positive, but could be a termination resistor, if so, these
are sometimes soldered and sometimes fit into a small socket.

What kind of problems are/did you have with the internal hard drive?

I recently re-installed the stock HD in my MSTE, maybe I can
help you with yours if you need some.

It has Ajax. But that chip is nothing better considering steprate.
It is just guaranteed good for HD floppies and maybe for ED ones
(never saw such). In other words, it can reliabely work at 16 MHz or
even 32 MHz (for ED). But dumb FDC never knows with what MHz is
clocked, so steprate should be solved by OS. Atari could solve it with
little effort - just setting steprate according to what floppy is
inserted and/or at what clock FDC runs. Maybe it would require
additional bit on some port, don't know.

PP

Regarding Disk Drive STEP RATE,
I thought, that this was taken care of after STE TOS was introduced.
I've never really messed with the Step Rate on any Factory drives.
All my Falcons, MSTE, 1040STE have the same Step Rate set.
Even though the 1040STE has only a DD drive. Never had a known
problem from it. When attaching external DD Drives, the Step Rate
is the same as the internal DD Factory drive on my 1040STE.

Now when using my 5 1/4 Floppy Drive (made for use on an ST/E),
the step rate needs to be set different, if TOS doesn't do it automatically.
Can't recall if TOS set that drives Step Rate different Automatically or
not.

I don't use the TOS's built in Format/Copy function that much.
One of my Favorite replacements is FASTCOPY PRO, however the
version I have which is Original, doesn't work on the Falcon.
I think there was one more version better than my current one.

FastCopy Pro, has support for 5 1/4 drives, Step Rates and much more!

My MegaSTE has the Factory 1.44 Disk Drive, I recall using a external DD
drive with it, but don't think I ever had to mess with the STep Rate.

Also, To my knowledge, STE TOS supports 2.88MB drives.
I don't recall anyone trying such a drive in a MSTE/TT or Falcon.
Anyone?

Steprate is solved very 'elegant' in TOS 2.06 - it is set to fixed 6mS- So, good for HD, good for DD floppies. Not good for ears. For 5 1/4 drives 12 mS steprate is required - not problem, just need to set some system variable, or use some prg. for that. I remember about it - we connected some PC drive in time when PC Ditto arrived, some 20 years ago ? Of course, TOS sets not steprate automatically. I don't know about Falcon and TT, but Mega STE with TOS 2.06 certainly sets nothing automatically.

Actually, all TOS support 2.88 MB drives - TOS is very flexible considering diverse disk formats. Some people reported succesful usage of ED floppies. (and needed to set steprate to 12mS, likely) .

Btw. I just read on Atari forum that only dip switch 7 is used from whole block. Others are unused in Mega STE.

I tried to add desktop Accessory in cartridge, according to
description in Atari ST Profibuch.
There stays that bit 29 of CA_INIT must be set for ACC. Executables

work fine from cartridge, but ACC not. Actually, it never reaches start point of ACC prg. , crashes before. Tried in TOS 1.02, 1.04 and 2.06 . Something is wrong in RAM allocation, as I could see tracing crash.

Does someone knows more about this?

Has someone cartridge with some ACC on, so we can see how it's header should look ?
It is easy to make image file of cartridge ROM content... (See in Steem)

PP

Hello,

I thought configuring environment in MiNT would be very similar to wht I did for MagiC!. Unfortunately, I must have done many things wrong, as it doesn't behave the way I thought it would. :-(
First, I wanted to use I:\Home as the home path, but in spite of all my attempts, when I type either "env" or "set" into the shell window, it reports "/root" as being the home path.
Then, I wanted to be able to shtudown the system easily, so I put both TaskBar and ShutDown applications into folders and added what I thought to be suitable lines into the CNF files, but there again I must not have undertood the good way to do this, as xxxxxxxxxxxxxx
Edit : well, now the "Shutdown" option appears in the menu, while it kept greyed until I started writing this! :-/ Murphy ? :-/

So, forget this one. :-/
OK, this was the third point : within freemint 1.16.1 distr, there's cops.app. If I rename it as .acc and put it at C:\ root, it only displays 2 among the 7 currently ativated cpx.
Then, if I rename it .app and add run c:\mint\cops\cops.app, it's launched at startup, in foreground. :-/
How do you, experienced users, use this control pannel ?
Here are my cnf files, please report anything bad.

```
--------------------------- START MiNT.CNF ------------------------------

shell = c:\gemsys\thing\thing.app
run c:\mint\taskbar\taskbar.prg
# run c:\mint\cops\cops.app
--------------------------- END XaAES.CNF -------------------------------
```

And, BTW, where can I find a list of all environment variables used
by MiNT ? The hyp files within 1.16.1 don't say much about this. :-(
I read many other docs on http://sparemint.org/sparemint/index.html
and http://xaaes.atariforge.net/docs.php?chapter=contents.htm for
instance, but there again didn't find what I searched for. :-(
No success either with google and "mint environment variables", but
I found this : http://perl.asylog.net/perl-all-en-5.8.5.pdf ;-)
Well, some links to pages that could help me learn by myself ?

Regards,

J.-Luc

Hello,

I won it on ebay some times ago, but couldn't use it as I miss the
monitor. Its a VME board, and a stick on it mentions "monograf".
From what I grabbed, it must be a mono 1280x960 graphics card, only
suitable for TTM 19x monitors, and not a VGA colour one. :-(
Whatever the amount I'm offered for, I will manage so as S&H do not
exceed 8-10   in the worst case and will send with receipt.

Regards,

J.-Luc

The first thing i see that looks incorrect is the way you declare env variables in xaaes.cnf:

```
home = i:\home\
```

it should be:

```
setenv HOME i:\home
```

```

See below.

Taskbar only evaluates this environment variable at start-up.

I launch cops.acc, and have no problems with this. Might be different
versions though. I'll check which version I use when I get back home.

> setenv HOME u:/i/home

I don't recommend setting $HOME here, as it's set by init when you log on.
When you log on using init, the home directory is set in /etc/passwd. And
I'm quite sure it's set to "/root" for your root-user. So when you set
HOME in mint.cnf, it's overwritten by init. If you set HOME in xaaes.cnf,
you overwrite the contents set by init, but the proper way of setting HOME
when using init is in /etc/passwd.

> ------------------------- START XaAES.CNF -----------------------------
> home = i:\home\

I don't think "home" is a keyword in xaaes.cnf. Use setenv to set the
contents of an environment variable.

> run u:\opt\toswin2\toswin2.prg

I prefer to autostart GEM-applications from the desktop or using Taskbar's
"Startup"-folder. The reason is that apps started from xaaes.cnf are

started before the desktop/AV-server, and many apps are not able to
properly detect and register with the AV-server in this case.

> And, BTW, where can I find a list of all environment variables used
> by MiNT ? The hyp files within 1.16.1 don't say much about this. :-(

I don't think MiNT itself evaluates any environment variables.

Well, the discussion was about the EtherNat & USB, and the current
Ethernet drivers for this card are written for MiNTNet, hence it would
be natural to get these drivers working in MagiCNet.

Well, as a matter of course there're ethernet drivers written for
MiNTNet, STinG, MM (MacSTip) and M_PC (In2Cat.dll) but implies this
anything to USB drivers? Or should MiNTNet IYO be responsible for USB?

The version I refer to is 1.09... I thought its development had stopped
at 1.07 or 1.08... :-/

So, you mean that I have to change it for the root user ?
I'll give it a try.

OK, then I'll re-read the hyps of Thing and Taskbar and find this
method you write about.
>

Well, but they are obligatorily evaluated by some part of the system,

aren't they ? And there must be somewhere some description of what is what and what does what - it must!

Regards,

J.-Luc

The CVS-version is adapted to GCC, I don't think there are any other changes. I use 1.07 from 1998 though, works fine on my Milan. I have not tried the CVS-version simply because I've had no problems with the old version.

> So, you mean that I have to change it for the root user ?

Yes. XaAES runs as root with the boot method you use.

> > I don't think MiNT itself evaluates any environment variables.
> >
> Well, but they are obligatorily evaluated by some part of the system,

Not anyone besides the one already in your mint.cnf. The kernel doesn't evaluate environment variables, but some tools do. I don't think there are any variables that MUST be set. On my setup I've only set PCONVERT (which tells MiNTlib which environment variables to convert to use slash as directory separator), UNIXMODE (which sets some compatibility features in MiNTlib) and PATH . I would assume that these are documented in MiNTlib,

but I really don't know as I've never needed to modify these (except from
PATH which just specify the standard search path(s) used by the shell).

Hmm.. I don't know if this would be what you are looking for,
but the TimeKeeper Cartridge (Cartridge Clock) Had an .ACC
so you could change time/date and or display time/date.
I still have it here.

hello , this is an unexplored area for me and my st!!!! steem !!!

with the help of you i have discovered, good good,
but what is the st cartridge image???

can you email me one , i do believe they differ from a ordinarry st
image....

maybe there is a small possibility only programs can be run from the
cartridge port?
but i will wait for a st cartridge image to arrive then begin some
tests...

i can program fairily stable on the st , enough to lauch a movable
resizeable window as an accessory, but i donot have the profi-buche
to instigate any furhter addresses or calls,,like the one you
mentioned..ok
charles

Omikron Basic wasn't/isn't an �old basic� in my opinion: It has got
modern procedures/functions (gosub), can call AES/VDI and has got a
compiler that generates speedy code.

Why do you mean �old�?

Regards
G�tz (who favors GFA-Basic over Omikron)

Version 3.96 of TeraDesk open-source desktop for the 16-bit and 32-bit lines
of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release brings fixes to some noncritical problems that were detected and a now feature related to formatting of floppy disks. Work on some other fixes and improvements is in progress, but it was felt that what has already been done should be made available to the users without waiting for other changes to be finished. See the development history file for details.

Have fun.

> Was not referring to omikron, was thinking of Computer Concepts FAST Basic.

Ah, didn't know this one. I thought Omikron was the only Basic for the ST that was first delivered on a ROM cartridge, then on a disk. I stand corrected.

> But since you bring it up, yeah omikron is *old* and discontinued since
> 1998.

The whole 68k-thing is *old* ...

Yes. All it is old...
I just want to try it. Documentation is pretty limited. Who knows,
maybe it is never made. I looked into TOS (2.06) little, it checks is
extension ACC, and if yes., comes some weird code, what results in bad
Malloc, and later address error.
Tried every possible parameters in cart. header... It is maybe
unsupported, buggy, or just DOCs are incomplete. All DOC just mentions
that bit 29 is set for ACCessories in CA_INIT field of header.

PP

O'Really? Well, MiNTNet has in actual fact IMHO to do as much with USB
drivers as STinG, MacSTip or In2Cat.dll...

thanks for the info, the DSP chip on the Falcon is what I'd like to do some programming for. I have some Tech info on the chip, but as to what software package to use I really didn't know.

I remember the DevPac being released, I figured it would be the way to go. Guess not.

Well none of that has anything to do with USB drivers. The original discussions were about USB, viable driver solutions, and the famous MagiCNet vs. EtherNat incompatibility. You contributed by stating that noone use MagiCNet.

The cartridge drive is old stuff, I've seen it (or a very similar solution) before. I'm a bit curious about the USB mouse interface though, there were very few details in the ad.

I figure its a variation of the IDE interface or similar.

I'm a bit curious about the USB mouse interface though,
> there were very few details in the ad.

No pics either. I'm thinking it is just a PS-2 interface with a USB
header to allow modern USB/PS-2 mice, rather than a genuine USB interface.

Hi Mark!! :-)

It would require a host of drivers and open development, and plenty of input from others. Such that it wouldn't just appear out of no where. And where would it be plugged? Either the cartridge port or the AHDI port. For a USB port to survive on the ST (and be adopted), it would have to be widely and publically documented. Possible? Yes. Likely? No.

It'll almost definitely be a hack of Tom Kirk's original design.
http://members.aol.com/tgkirk/ps2mous.htm (these have been floating about on eBay for quite a while now, shipped from Poland)..

Aly

Well, actually I've seen this dealer before. He ripped a few people off.
He promised to deliver Eiffel boards but never did although received the
money. :-(

So be warned.

Regards,

Frank

Nope! That's not the issue...

--------------------- <nibble here off> ---------------------
> > I know that programming is nothing more than hacking a computer to

Well, and there we have it. My impression is that most of the active
coders (far from all though) are using FreeMiNT. Asking them to fix it
for MagiCNet won't get you far.
--------------------- </nibble here off> --------------------

� <8ae7bffc-4343-4747-a43f-bf2fc5de2b01@2g2000hsn.googlegroups.com>

The main problem is that none of the the few active FreeMiNT coders is
willing to look over the rim of his tea cup!

> You contributed by stating that noone use MagiCNet.

And that's the absolute truth - most MagiC hackers use MM or M_PC...

Well, after all, it was the topic for this thread - "EtherNat & USB drives"...

> The main problem is that none of the the few active FreeMiNT coders is
> willing to look over the rim of his tea cup!

Well, we've been over this before. If the overwelming majority of all coders on the planet use some form of MagiC, how come we haven't seen any EtherNat drivers for MagiC yet? How can that be, Fidel-Sebastian Hunrichse-Lara? Is this the fault of the "few" narrow-minded FreeMiNT coders who are not willing to look over the rim of their tea cup?

> > You contributed by stating that noone use MagiCNet.
> And that's the absolute truth - most MagiC hackers use MM or M_PC...

And how does that help people get USB & network drivers for their EtherNats and NetUSBees?

It is nothing really new, folks. IDE IF is well known Paskud, just this time with CF card (they are really cheap now) .

USB mice adapter is also not new. It is in fact PS2 adapter, but as USB mouses use PS2 protocol, it is just with USB connector. Myself made it in one afternoon (there is complete DOC on WEB for building - 1 Pic plus couple resistors is all what is needed) .

Not all mice use the PS/2-protocol. I've tried a wireless USB-mouse on my Milan using a USB->PS/2-adapter, and it didn't work. I've also tried a wired optical USB-mouse which didn't work. A Microsoft wired USB-mouse did work with the same adapter though.

Hello,

the last version of MyPDF is under GPL with the source.

<http://www.newtosworld.de>

If someone download the archiv he must rename it form zip to tar.gz.

I have nothing todo with that.

A lot do, but some don't. MS ones tend to be dual. If you buy it with a
PS2 adapter you're home and hosed.

    Hello,

    I can't get it to work using Aranym.
    Either "can't open" because the data encryption, well, that's normal.
    Or it hangs while opening the PDF (2 bombs).

    Guillaume.

Does the Falcon have any setting in NVRAM or on the
mother board for the amount of RAM it came with from
the Factory?

I have upgraded a few Falcons from 4megs to 14megs using
different 14meg Ram boards.

I ran into a weird, problem the other day with a Falcon that I
had in storage, the only way I could get it working was to
install the 4meg Ram board.
Then after, reinstall the 14meg board. Works fine now.

We go entirely round in a circle and thus it's an absolute no-no!

No it doesn't. However there are after market simm boards that require
jumpers set. I have the Actionsoft and Chromagic Ram Gizmo cards. Both
require jumpers for 1/4/14 meg.

You may have just had a bit of oxidisation on tho socket or pins.
Installing the other card may have just removed some of the tarnish
enough for a better electrical contact.

Mark

Hi,

I woudl like ask about Thing desktop. Is it possibility to use backround in window?
I am using Thing ver. 1.27 but I could not find it, only possibility to use img picture on all desktop.

Best Regards

Piotrek

Nope. It's been set by the installer. Will comment it out.

Troll, MyMail, Litchi ?
I needed glueStik to use them under MagiC! - though I'm quite sure
I could use MyMail straight with MagiC-Net at beginning, so there
must be some changes since then -.
I'm going to test without this line.

TOS/TTP problem is solved now, thanks David.

```
Er... I do use NVDI...
>
> 2. mint.prg should be the last program in auto folder. and please,

Mint is actually the very last program. The list I posted is sorted,
I made it using the ls command.
About mupfel : why should it cause problems, since it isn't run,
unless ttps can be autorun from the auto folder...

Thanks,

J.-Luc

MyMail and Troll need this, while HighWire uses it's own MinT-Net
ovl and runs fine on its own

It's a bug. You should report it to the EasyMiNT author.

Bizarre, j'utilise MagiC mais sans Gluestik, il faut dire que c'est
STinG et non MagiCNEt ;)

One tip : no need to launch gluestik at boot sequence. You can start
gluestick just before sucking the Litchi or throwing the Troll ;)

personal recollections. While it is an interesting little piece of history the mod was not very popular at the time. I seem to recall that it let you run several pieces of software like Lotus 123 which were expensive ~$300 at the time and pretty much standards in the industry.

There was at least one PD spreadsheet that I used on my ST and by the time the emulator came out, the prices of clones had dropped to under $600 so most people went that route. I was probably only one or two the people in the company I worked for at the time who actually bought

Quattro for ~$100 vs. get a cracked copy of 123 for home use.

The thing is you wouldn't want to run Lotus 123 or Word Perfect or any other software on a PC, too slow. Michtron came out with an AT Speed but it sufferred from the same price pressure from the clones.

Prices are typically high on vintage stuff because ~some aging white guy remembers the Honda CR250 or running Dungeon Master on his ST. Unfortunately no one looks back fondly about running a spread sheet on his ST.

Rick

Hi!

I have several boxed games up for grabs over on eBid (a good alternative to thiefbay), currently I'm listing Civilization, M1 Tank Platoon, Robinson's Requiem, MAX USGold compilation, Jimmy White's Whirlwind Snooker, Railroad Tycoon.

If you're not already a member of eBid it's quick and easy to sign up, just follow this link: http://uk.four.ebid.net/perl/normal.cgi?ref=heatemyfather&mo=register-main

My eBid games store:
http://uk.ebid.net/stores/New-Retro-Gamer

Hope you'll come and have a look :-)

Hello,

Do some of you use large (>15 GB) hard drives with more than 15
partitions ?
I'm having problems with such drives : when I first partition
them, it's ok, but then if I want to change partitions type or
even repartition, they cause the system freeze, no matter the OS
and the processor (it happens on plain TOS, MagiC! and MiNT, and
in 030 or 060 mode - I tried all the cases -.). :-(

Regards,

J.-Luc

Hello,

With the help of Olivier Landemarre, I am translating his work on SCREEN.LDG
into assembly.
I need some testers becaus I don't have every screen mode at home.
The test is easy (through KRONOS).

Everything is explained on my page:
http://pagesperso-orange.fr/gtello/screen.htm

Thanks for some feedback!
Mostly on Falcon modes and if someone has a graphic card with 65536 colors
(not 32768) and a Matrix with a 16 colors mode!

Guillaume.

I second that. I started programming a couple of years ago and find it a
fascinating exercise. It keeps those brain cells working.

Cheers,
JFL

Indeed. Get rid of this.

Yes, mint.prg must definitely be last. And isn't there a 060 kernel? I know I have one.

>> exec c:\mint\68882.prg

Remove this one also.

Cheers,
JFL

OK, I've got my answer : it seems one can't partition a drive into
more than 15 partitions. :-(
Has it been explained before ?

Regards,

J.-Luc

Gluestik is pretty clean anyway. I also have it running on my Falcon.

Cheers,
JFL

Just lost another last minute bidding war for a STacy. :(

I swear, I don't think I'll ever get one - and buying one from Best Electronics or B&C Computervision (as much as I like them) for $799 -899.00 seems a bit steep.

Guess I'll just keep on looking for one.

BTW, how many STacy's were actually produced? Thanks.

I know about a Stacy here in Norway. It's one of my old ones, got 4Mb and a good backlight (which is pretty rare for a Stacy, as the backlight EL film burns out after a few years). If you're interested I can ask the owner if he wants to sell it.

> Guess I'll just keep on looking for one.

I've got two, both broken beyond repair. As soon as I find a good 9" colour LCD monitor, I will turn one of them into a PC running ARAnyM ;-)
I've already converted the keyboard.

> BTW, how many STacy's were actually produced? Thanks.

I have absolutely no clue, but considering the price I would guess that not many where sold. In Norway I think that less than 20 where sold - I've owned three of them and know about two others.

I guess that Michtron resold the German PC Speed �Sack PC Speed� by
Hans-J�rg Sack.

        <http://www.atari-computermuseum.de/download.htm>

has driver disks for PC-Speed and AT-Speed.

it's all too simple to explain - you see, The iDiot Forever Known As
Sinclap managed to get trapped inside the Steve Jobs Reality Distortion
Field(TM)  (TiFKAS was licking Steve's boots at the time), and the
